Edited by four leading members of the new generation of medical and healthcare ethicists working in the UK, respected worldwide for their work in medical ethics, *Principles of Health Care Ethics, Second Edition* is a standard resource for students, professionals, and academics wishing to understand current and future issues in healthcare ethics. With a distinguished international panel of contributors working at the leading edge of academia, this volume presents a comprehensive guide to the field, with state of the art introductions to the wide range of topics in modern healthcare ethics, from consent to human rights, from utilitarianism to feminism, from the doctor-patient relationship to xenotransplantation. This volume is the Second Edition of the highly successful work edited by Professor Raanan Gillon, Emeritus Professor of Medical Ethics at Imperial College London and former editor of the *Journal of Medical Ethics*, the leading journal in this field.

Developments from the First Edition include: The focus on 'Four Principles Method' is relaxed to cover more different methods in health care ethics. More material on new medical technologies is included, the coverage of issues on the doctor/patient relationship is expanded, and material on ethics and public health is brought together into a new section. The Pocket Book is for use by doctors nurses and other

health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Management. "This newly revised edition of *Cross-Cultural Caring: A Handbook for Health Professionals* looks at Vietnamese, Cambodian and Laotian, Chinese, Japanese, Iranian, South Asian, and Central American ethno-cultural groups. It stresses the need to understand both the cultural beliefs and the daily life concerns facing immigrants, such as work, income, child-rearing, and aging, all of which impinge on health." "This long-awaited new edition provides up-to-date statistics and fresh analysis, responding to changing trends in immigration. Additional material includes a new chapter addressing the special circumstances of refugees; short real-life stories of immigrants' and refugees' experiences; and a thorough, easy-to-use index." --Résumé de l'éditeur. No other book on the subject

Bee keeping isn't just for the professional farmer; bees can be kept in any situation from the simple backyard patio and garden to large expanses of farm land. This comprehensive and attractive beekeeping guide, from Hobby Farm Press, the same people who bring you Hobby Farms and Hobby Farm Home magazine, Beekeeping takes readers from finding their bees, housing them, collecting honey and using their produce for pleasure and possible profit. This colorful book, including entertaining chapters on the history of bees and beekeeping, serves as an extensive introduction to help novice beekeepers fully understand this exciting hobby! Praise for the first edition of *Research into Practice and Research Methods for Nurses and the Caring Professions*: These books provide a good introduction for the uninitiated to reading and doing research. Abbott and Sapsford provide a clearly written and accessible introduction to social research ... One of their aims is to 'de-mystify' research, and in this they succeed admirably... After reading the text and the articles in the reader, and working through the various research exercises, readers should have a clear appreciation of how to evaluate other people's research and how to begin their own. -David Field, *Journal of Palliative Medicine* This book, now substantially revised in its second edition, is about the appreciation, evaluation and conduct of social research. Aimed at nurses, social workers, community workers and others in the caring professions, the book is particularly focused on research which evaluates and contributes to professional practice. The authors have provided many short, practical exercises in the text, and the examples are drawn mostly from

projects carried out by one or two people rather than large research teams. The clear, accessible style will make this the ideal introductory text for those undertaking or studying research for the first time. The book may be used in conjunction with *Research into Practice* (Open University Press), a reader of useful examples selected by the same authors. This new and expanded edition is aimed directly at the learning needs of student nurses and is unique in that context. Whilst there are many high quality books available for academic study in palliative care this is currently the only one that balances a strong educational focus for developing nursing practice with an understanding of the particular needs of student nurses. The text maintains a sensitive and supportive approach to the key themes of palliative care nursing, but contains important new material of a wide range of initiatives that are impacting on end of life care across the UK. It will provide the reader with a concise, easy to read and learning oriented text that will give advice and direction to the many challenges faced in this most important area of patient care. Each chapter examines a key component of care and new features include:

- Learning outcomes at the start of each chapter to guide the reader
- Clinical anecdotes to illustrate the reality and complexity of practice
- Extensive use of recognisable symbols to guide the reader and improve the usability of the text
- Competency assessment to help gauge knowledge and progress
- Reflective points to aid professional development
- Reflective activities to enable the student to reinforce learning from practice
- Links to appropriate clauses of the current 2008 NMC Code of Professional Conduct
- Quality internet resources relevant to chapter content
- Self assessment multiple choice tests at the end of each chapter to consolidate learning

An extensive palliative care quiz covering the main topic areas of the book to test knowledge. This can be used as evidence with professional portfolios. This pocket book contains up-to-date clinical guidelines, based on available published evidence by subject experts, for both inpatient and outpatient care in small hospitals where basic laboratory facilities and essential drugs and inexpensive medicines are available. It is for use by doctors, senior nurses and other senior health workers who are responsible for the care of young children at the first referral level in developing countries. In some settings, these guidelines can be used in the larger health centres where a small number of sick children can be admitted for inpatient care. Unless dealing with injury regularly, few surgeons can attain and sustain the level of skill necessary for decision making in major trauma. This includes both the intellectual decisions and the manual dexterity required to perform all the manoeuvres needed for surgical access and control. These can be particularly challenging, and may be infrequently required, yet rapid access to and control of sites of haemorrhage following trauma can be life-saving surgical intervention. Many situations require specialist trauma expertise, yet often this is simply not on hand within the available time frame. *Manual of Definitive Surgical Trauma Care, Second Edition*, is written by the editorial board of the DSTCTM, which is a short course focusing on the life-saving surgical techniques and surgical decision-making

required for surgeons who deal with major surgical trauma on an infrequent basis. This course supplements the well-recognized and accepted American College of Surgeons' Advanced Trauma Life Support (ATLS®) course. This manual is published in association with IATSIC (the International Association for the Surgery of Trauma and Surgical Intensive Care), and is written by an Editorial Board of surgeons who belong to that society. IATSIC are broadening their reach and running more and more courses worldwide. This new second edition has been updated to incorporate all recent developments in this rapidly progressing area. It emphasizes how practical 'real-life' decisions on the care of the injured patient should be made and then covers in practical terms the surgical techniques required. Every aspect of surgical trauma care is covered, including: ·the causation of injuries - aids rapid understanding of presented trauma; ·the initial, pre-hospital and emergency department care of the patient - all of which may determine eventual outcome; ·the resources required, both physical and intellectual, within the hospital to deal with the specific problems associated with patients with multiple injuries; the limitations in providing specialist expertise within the time frame required. It is an ideal practical manual for both trainees and qualified surgeons. Developed to provide nurse clinicians with a resource for the management of adult critical care patients, Mosby's Critical Care Nursing Reference condenses the most essential information needed by nurses working in the ICU. Chapters are dedicated to psychosocial concerns, complementary therapies, and the unique needs of a pediatric patient in an adult ICU. Therapeutic modalities and pharmacology are both examined, with information that is useful for the student, the new nurse, and the experienced professional. (Midwest).
