A Significant Casualty Dec 26 2020 In a perfect world a story such as I am about to relate could never have happened and would never have needed to be told, but this is not a perfect world and life does not allow us in the manner to which we feel we deserve. We have become accustomed to accepting mediocrity bureaucratic incompetence. Indifference and ambivalence are becoming the accepted norm. We live in a democratic society where less than half the eligible members actually participate and as a result the elected owe more allegiance to the special interests that fund and support them than to the constituents they purport to represent. As a result we have enabled a system to exist where the interests of business override the rights of the individual—a system where we permit industry to write the regulations intended to control our activities. We live in a society where human life is measured and analyzed compared and evaluated against the cost of doing business, where litigators feed on the misery of others while doing little to prevent the conditions which they feed and depend. While a "kinder and gentler" government stands idly by protecting the special interests that feed the political system while hiding behind "cost to benefit" studies to justify their inaction. Under current United States Coast Guard policy a "Significant Casualty" is one that may involve multiple deaths, the loss of a ship of five hundred gross tons or larger or one that if properly investigated could result in the implementation of changes in current standards of safety. And it is only these "Significant Casualties" that by regulation merit proper investigation. The following is a story of a young man who went off to work one morning never to return. But mostly it is the story of a man who like all men should never be allowed to be remembered as only another statistic. This is the story of one such Significant Casualty. The five-year

receives a final punctuation when the father is granted "Party in Interest" status and has his son's case properly reviewed at a formal United States Coast Guard Investigation. An Investigation that not only looks at the fatality but at the regulatory atmosphere that allowed the conditions to exist. The story is timely and highlights not only a father's quest to clear his son but also the illegal and improper inspection of oil drilling facilities in the US Gulf of Mexico. According to World Oil (Feb 2010 issue) at the end of 2009 there were 2,237 oil wells in the Federal waters of the Gulf and 242 more in the state waters of Louisiana. All wells are under regulations written by the industry. An industry more interested in profits than safety. In April 2009 President Barack Obama, while addressing the issues surrounding mine safety following the deaths in West Virginia, was quoted as saying, "A failure first and foremost of management, a failure of oversight and a failure of laws so riddled with loopholes that companies repeatedly can violate safety regulations with impunity." Those same comments ring true for the oil drilling companies of this country. As horrific as the disaster was in West Virginia, more workers die in the underwater workplace each year than do in all other nation's mines.

Underwater Forensic Investigation Aug 22 2020 The evidence discovered at underwater crime scenes must be handled with the same attention to proper chain of custody procedures as with any other type of investigation. Improper handling of these scenes can lead to evidence being lost, unrecognizable, destroyed, contaminated, or rendered inadmissible at the time of trial. Updated and expanded, Underwater Forensic Investigation

New Frontiers in Marine Tourism Aug 02 2021 'New Frontiers in Marine Tourism' is the first book of this kind to address and analyse this burgeoning tourism sector comprehensively. By integrating aspects such as the sustainability, safety, education, experiences and management of diving tourism the text highlights a variety of pressing topics related to the management of diving tourism, including: * different types of dive locations and their particular characteristics and the geographical distribution of dive locations * the social and economic significance of diving tourism in destinations worldwide * different motivations and types of diving tourists, their learning behaviour, knowledge of marine environments, and their interaction with the environment and fauna. * diver satisfaction, attitudes and preferences, education and interpretation, and compliance with regulations * environmental impacts, and aspects of risk and health.

Open Water Diver Jul 13 2022 If you are planning to take your Open Water Diver course in a few weeks you need a study guide that will help you prepare for the final test with practise questions. We include what you need to know before you take the test, tips from an experienced instructor, tricks for taking the exam, Recreational Dive Planner information and 57 practise questions. During the test you need to answer questions about basic principles of scuba diving, which shows that you know how to plan dives, choose the right scuba equipment, understand underwater signals and diving procedures. This book is written by an experienced instructor to help you make sure you are adequately prepared and ready! It was updated in 2022 to include Covid related questions.

Coping With Extreme Environments: A Physiological/Psychological Approach Feb 25 2021 Understanding how humans cope in extreme environments has expanded our knowledge of the physiological and psychological challenges involved and helped us to quit our comfortable paradigms built on "steady state". Furthermore, measuring our reactions to intermittent stressors and determining the oscillations of our physiological mechanisms has led us to unexpected understandings. This methodology has also directly improved our translational or multidisciplinary approach to the subject. Studying healthy individuals in extreme environments could improve our understanding of patients with impaired physiological capacities (who struggle coping with an environment that becomes extreme to them) and also improve our understanding of physiology and psychology in the elderly. This eBook collects articles that address this translational multidisciplinary approach in an integrative way. As a whole, this Research Topic aims to better understand human/animal physiology and psychology.

Diving Medical Acupuncture Nov 12 2019 Written for acupuncturists and Chinese medicine practitioners, this book describes the medical conditions that can prevent, complicate or result from diving and other water sports, and provides effective clinical treatments. The most common problems experienced by divers - ear, nose and throat (ENT) disorders - can be effectively treated with acupuncture. Through in-depth knowledge of Western diving medicine, diving techniques and Chinese medicine, the author prescribes acupuncture diagnostics and treatment for these ENT disorders. Complete with anatomical diagrams and acupuncture charts, this is a practical resource for acupuncture clinicians who deal with the issues associated with diving. Advice for patients is given at the end of each chapter, and is available as a handout in downloadable format.

Manuals Combined: U.S. Navy Diving Manual Revision 7 (1 December 2016); A Navy Diving Supervisor's Guide for Safe and Productive Diving Operations; and Guidance For Diving In Contaminated Waters Feb 08 2022 Over 1,000 total pages ... INTRODUCTION 1-1.1 Purpose. This chapter provides a general history of the development of military diving operations. 1-1.2 Scope. This chapter outlines the hard work and dedication of a number of individuals who were pioneers in the development of diving technology. As with any endeavor, it is important to build on the discoveries of our predecessors and not repeat mistakes of the past. 1-1.3 U.S. Navy. The U.S. Navy is a leader in the development of modern diving and underwater operations. The general requirements of national defense and the specific requirements of underwater reconnaissance, demolition, ordnance disposal, construction, ship maintenance, search, rescue and salvage operations repeatedly give impetus to training and development. Navy diving is no longer limited to tactical combat operations, wartime salvage, and submarine sinkings. Fleet diving has become increasingly important a

diversified since World War II. A major part of the diving mission is inspecting and repairing naval vessels to minimize downtime and the need for dry-docking. Other aspects of fleet diving include recovering practice research torpedoes, installing and repairing underwater electronic arrays, underwater construction, and locating and recovering downed aircraft.
