Anole lizards have grown larger toe pads, to grip more tightly in frequent hurricanes. Warm waters cause the development of Humboldt squid to alter so dramatically that fishermen mistake them for different species. Brown pelicans move north, and long-spined sea urchins south, to find cooler homes. And when coral reefs sicken, they leave no territory worth fighting for, so aggressive butterfly fish transform instantly into pacifists. A story of hope, resilience, and risk, Hurricane Lizards and Plastic Squid is natural history for readers of Bernd Heinrich, Robin Wall Kimmerer, and David Haskell. It is also a reminder of how unpredictable climate change is as it interacts with the messy lattice of life. This book aims to introduce the reader to Biology at an advanced level and to be used in addition to the text book I am sure you already own. I think that conventional textbooks embed the principles too deeply in the text and that these principles are the key to understanding Biology and to success in exams - which is what all students want.This book explains Biology in the form of a series of questions and answers: such as 'What is the function of DNA?' ; answer: 'It contains genes that code for the production of proteins and is the molecule of inheritance.'The book also contains exam questions and answers - with hints and tips from me as to how to interpret and answer the questions.Each chapter begins with a glossary so you understand the terms and words BEFORE you read the chapter. My hope is that you will find the book really useful and it will improve and deepen your understanding of Biology.
