This book provides an international legal analysis of the most important questions regarding Iran's nuclear program since 2002. Setting these legal questions in their historical and diplomatic context, this book aims to clarify how the relevant sources of international law - including primarily the 1968 Nuclear Non-proliferation Treaty and IAEA treaty law - should be properly applied in the context of the Iran case. It provides an instructional case study of the application of these sources of international law, the lessons which can be applied to inform both the on-going legal and diplomatic dynamics surrounding the Iran nuclear dispute itself, as well as similar future cases. Some questions raised regard the watershed diplomatic accord reached between Iran and Western states in July, 2015, known as the Joint Comprehensive Program of Action. The answers will be of interests to diplomats and academics, as well as to anyone who is interested in understanding international law's application to this sensitive dispute in international relations.

Guidelines for Mine Waste Dump and Stockpile Design is a comprehensive, practical guide to the investigation, design, operation and monitoring of mine waste dumps, dragline spoils and major stockpiles associated with large open pit mines. These facilities are some of the largest man-made structures on Earth, and while most have performed very well, there are cases where instabilities have occurred with severe consequences, including loss of life and extensive environmental and economic damage. Developed and written by industry experts with extensive knowledge and experience, this book is an initiative of the Large Open Pit (LOP) Project. It comprises 16 chapters that follow the life cycle of a mine waste dump, dragline spoil or stockpile from site selection to closure and reclamation. It describes the investigation and design process, introduces a comprehensive stability rating and hazard classification system, provides guidance on acceptability criteria, and sets out the key elements of stability and runout analysis. Chapters on site and material characterisation, surface water and groundwater characterisation and management, risk assessment, operations and monitoring, management of ARD, emerging technologies and closure are included. A chapter is also dedicated to the analysis and design of dragline spoils. Guidelines for Mine Waste Dump and Stockpile Design summarises the current state of practice and provides insight and guidance to mine operators, geotechnical engineers, mining engineers, hydrogeologists, geologists and other individuals that are responsible at the mine site level for ensuring the stability and performance of these structures. Readership includes mining engineers, geotechnical engineers, civil engineers, engineering geologists, hydrogeologists, environmental scientists, and other professionals involved in the site selection, investigation, design, permitting, construction, operation, monitoring, closure and reclamation of mine waste dumps and stockpiles. To assure the safe, technically optimal and cost effective management of spent fuel and radioactive waste, appropriate policies and strategies are required. This publication clarifies the differences between a policy and a strategy, and provides advice on the typical composition, mutual links and the process of compilation of such documents. This publication summarizes the reviewed information distributed in previous IAEA publications and provides an up to date, overall picture of the management of disused sealed radioactive sources (DSRS) based upon the current status and trends in this field. It incorporates the most recent experience in source management, including newly developed techniques used for DSRS conditioning and storage. Problems encountered and lessons learned are also highlighted in the publication in order to help avoid the mistakes commonly made in the past in managing disused sources. The U.S. Senate has been investigating case histories on the workings of the commodities markets, to ensure well-functioning markets with market-based prices, effective hedging tools, and safeguards against market manipulation, conflicts of interest, and excessive speculation. This is the report of an investigation of the recent rise of banks and bank holding companies as major players in the physical markets for commodities and related businesses. It presents case studies of three major U.S. bank holding companies, Goldman Sachs, JPMorgan Chase, and Morgan Stanley, that over the last decade were the largest bank holding company participants in physical commodity activities. The report shows how the tradition of separating banks from commerce is eroding, and along with it, protections from risks and potentially abusive conduct. It also shows how the Federal Reserve has taken insufficient steps to address this problem. Tables and figures. This is a print on demand report. "The IAEA integrated nuclear infrastructure review (INIR) missions are designed to assist Member States in evaluating the status of their national infrastructure for the introduction of a nuclear power programme. From 2009 to 2014, fourteen IAEA INIR missions and follow-up activities were conducted in nine countries planning to implement a nuclear power programme and one country expanding an existing programme. During this time considerable experience was gained and this has been used to continuously improve the overall INIR methodology. This publication summarizes the results of the missions and highlights the most significant areas where recommendations were made."--Publisher's description. Nuclear forensics is the science of determining the history of a sample of radioactive material through the study of the material's characteristics. While nuclear forensic analysis has normally been associated with investigations and prosecutions in the context of trafficking of nuclear materials or nuclear terrorism, it has wider applications in various national security contexts, such as

nuclear non-proliferation, disarmament, and arms control. The New Nuclear Forensics provides a survey and an analysis of the scientific discipline of nuclear forensic analysis, and the way it is applied to specific issues of international peace and security, from the 1940s to the present day. This book describes the various methods used in nuclear forensics, giving first a general introduction to the process followed by details of relevant measurement techniques and procedures. In each case, the advantages and limitations are outlined. It uses a language and methodology that opens the issue of nuclear forensics and its potential applications to a non-specialist readership. The development of multi-collector inductively coupled plasma mass spectrometry (MC-ICPMS) makes it possible to precisely measure non-traditional stable isotopes. This volume reviews the current status of non-traditional isotope geochemistry from analytical, theoretical, and experimental approaches to analysis of natural samples. In particular, important applications to cosmochemistry, high-temperature geochemistry, low-temperature geochemistry, and geobiology are discussed. This volume provides the most comprehensive review on non-traditional isotope geochemistry for students and researchers who are interested in both the theory and applications of non-traditional stable isotope geochemistry. This publication provides an historical overview and shows how ISL experience around the world can be used to direct the development of technical activities, taking into account environmental considerations, and emphasizing the economics of the process, including responsible mine closure. Nuclear waste dumping has further poisoned our environment, and developing nuclear technology in the Third World poses still further risks. "She showed me what one set-on-fire human being can do to shift the consciousness of the world." "Sister Helen Prejean, author of *Dead Man Walking* "Dr. Helen Caldicott," the Sunday San Francisco Chronicle declares, "is back on the scene." *A Desperate Passion* is Caldicott's engaging, inspiring memoir, chronicling her life both on and off the scene. Raised in Australia and trained as a physician, she first found her voice protesting French nuclear tests in the Pacific. Years later she rose to international prominence, founding Physicians for Social Responsibility, "which did perhaps more than any other group to thrust the nuclear issue under the public eye" (New York Times). "Driven by intense passions, she seems to have adopted the world's population as her children. And all of us are probably better off as a result" (East Bay Express Books) but Caldicott, wife and mother of three, found that her success did not come without cost. This is a personal story too, a candid, revealing self-portrait of a woman who has not relinquished her remarkable efforts to save the world. Vols. for 1967-70 include as a section: Who's who of Rhodesia, Mauritius, Central and East Africa. The conference, of which this publication is the proceedings, is the latest in the series organized by the IAEA on the subject of radioactive waste safety. Demonstrating the safety of radioactive waste disposal remains a challenging issue, from both technical and sociopolitical perspectives, and is receiving increasing scrutiny throughout the world. The conference discussed the emerging global nuclear safety regime and its implications for radioactive waste management - in particular the impact of the "Joint Convention on the Safety of Spent Fuel Management and the Safety of Radioactive Waste Management", the international safety standards and national waste management policies. High on the agenda was the concept of the safety case and its use, together with supporting safety assessments. The whole range of disposal concepts were discussed, as was the regulatory review and approval process, and stakeholder involvement. The conference proceedings reports the various sessions and includes the presentation together with concluding summaries from the session Chairs and the Conference President.--Publisher's description. This Safety Guide provides recommendations on the structure and content of the safety analysis report to be submitted by the operating organization to the regulatory body for authorization of the siting, construction, commissioning, operation and decommissioning of a nuclear power plant. It is intended to facilitate both the development of the safety analysis report by the operating organization and the checking of its completeness and adequacy by the regulatory body. The publication is a revision of IAEA Safety Standards Series No. GS-G-4.1, Format and Content of the Safety Analysis Report for Nuclear Power Plants, which it supersedes. The revision reflects feedback experience from the Fukushima Daiichi accident and the subsequent stress tests performed. It also describes good practices and experience from the use of safety analysis reports for newly built nuclear power plants in different States and informs on recent progress made in approaches to safety assessment. With unparalleled insight into BP and its safety record leading up to the disaster in the Gulf of Mexico, Tom Bower gives us a groundbreaking, in-depth, and authoritative twenty-year history of the hunt and speculation for our most vital natural resource. OIL Money, Politics, and Power in the 21st Century Twenty years ago oil cost about \$7 a barrel. In 2008 the price soared to \$148 and then fell to below \$40. In the midst of this extraordinary volatility, the major oil conglomerates still spent over a trillion dollars in an increasingly frantic search for more. The story of oil is a story of high stakes and extreme risk. It is the story of the crushing rivalries between men and women exploring for oil five miles beneath the sea, battling for control of the world's biggest corporations, and gambling billions of dollars twenty-four hours every day on oil's prices. It is the story of corporate chieftains in Dallas and London, traders in New York, oil-oligarchs in Moscow, and globe-

trotting politicians-all maneuvering for power. With the world as his canvas, acclaimed investigative reporter Tom Bower gathers unprecedented firsthand information from hundreds of sources to give readers the definitive, untold modern history of oil . . . the ultimate story of arrogance, intrigue, and greed.
