The U.S. health care system is the most expensive in the world by a considerable margin, yet health indicators are among the worst in the developed world. Seeking Value: Balancing Cost and Quality in Psychiatric Care, a comprehensive volume by the Group for the Advancement of Psychiatry's Mental Health Services Committee, examines the factors that have contributed to this disparity and offers a holistic vision for health care reform--one in which the psychiatric profession plays a pivotal role. From cost consciousness in the prescribing of medications and forming alliances with other health professionals to rethinking the way health care is financed and efforts to eliminate counterproductive incarceration practices, this guide outlines individual, systemic, and sociopolitical interventions that will position readers to effect substantive change both in the short term and in the long term. Beyond spurring thought and conversation around how to improve value in the services the psychiatric profession provides and the systems in which it operates, this book will equip those looking to develop a concrete advocacy agenda and the strategies needed to see it realized. Clinical material is organized by body system, with each chapter providing fully

illustrated anatomy and physiology, assessment techniques, diagnostic test data, nursing diagnoses with sample plans of care, information on major disorders, patient-teaching guidelines, treatments, and related patient care. The EUNICE (European Network of Universities and Companies in Information and Communication technology) (<http://www.eunice-forum.org>) mission is to jointly develop and promote the best and most compatible standard of

European higher education and professionals in ICT by increasing scientific and technical knowledge in the field of ICT and developing their applications in the economy. The EUNICE Workshop is an annual event. This year the workshop was sponsored by IFIP TC 6 WG 6.6: Management of Networks and Distributed Systems. Eight years ago, the seventh edition of the EUNICE workshop took place in Troheim with the topic “Adaptable Networks and Teleservices.” Since then “adaptability” has become a topic which is found in most ICT conferences. The concept teleservices, which is a telecommunication domain concept from the 1980s, has been lifted out of the telecom community and is now found with new and sometimes mysterious names such as service-oriented architecture and cloud computing.
