Give students that extra boost they need to acquire important concepts in specific areas of math. The goal of these How to books is to provide the information and practice necessary to master the math skills established by the National Council of Teachers of Mathematics. Each book is divided into units containing concepts, rules, terms, and formulas, followed by corresponding practice pages. Get ready to master the unknown number! Master Math: Solving Word Problems is a comprehensive reference guide that explains and clarifies the difficulties people often face with word

problems, in a simple, easy-to-follow style and format. Beginning with the most basic types of word problems and progressing through to the more advanced, *Solving Word Problems* shows you how to focus first on the words in the problem, and then on the numbers, breaking down the problem into smaller segments to help you work through. Using familiar situations from everyday life such as percents and discounts, interest, motion and speed, and probability, each type of word problem is taught using step-by-step procedures, solutions, and examples. And end-of-chapter problems will help you practice what you learned. A complete table of contents and a comprehensive index enable you to quickly find specific topics, and the approachable style and format facilitate an understanding of what can be intimidating and tricky skills. Perfect for both students who need some extra help or rusty professionals who want to brush up, *Solving Word Problems* will help you master everything from simple equations and percents to statistics

and probability! Everyone needs a better way to understand Math. *Math Is Not Magic* focuses on what the other books are missing. *Math Is Not Magic* provides the universal conceptual process that helps you understand how to solve word problems covering Algebra 1 & 2, Geometry, Trigonometry, Calculus, Probability, and Statistics. *Math Is Not Magic* shows you what to do to solve a word problem and explains how to picture getting to the solution. Everyone needs to understand that the mind thinks in pictures and not in words. Teaching people to picture how to solve a word problem will not only get them the answer but also help them envision how they got it. Your solution to MATH word PROBLEMS! Find yourself stuck on the tracks when two trains are traveling at different speeds? Help has arrived! *Math Word Problems Demystified, Second Edition* is your ticket to problem-solving success. Based on mathematician George Polya's proven four-step process, this practical guide helps you master

the basic procedures and develop a plan of action you can use to solve many different types of word problems. Tips for using systems of equations and quadratic equations are included. Detailed examples and concise explanations make it easy to understand the material, and end-of-chapter quizzes and a final exam help reinforce learning. It's a no-brainer! You'll learn to solve: Decimal, fraction, and percent problems Proportion and formula problems Number and digit problems Distance and mixture problems Finance, lever, and work problems Geometry, probability, and statistics problems Simple enough for a beginner, but challenging enough for an advanced student, *Math Word Problems Demystified, Second Edition* helps you master this essential mathematics skill. Provides comprehensive overview of strategies for solving word problems to be used in classroom or home setting. In addition to having to master a vast number of difficult concepts and lab procedures, high

school chemistry students must also learn, with little or no coaching from their teachers, how to solve tough word problems. Picking up where standard chemistry texts leave off, *How to Solve Word Problems in Chemistry* takes the fear and frustration out of chemistry word problems by providing students with easy-to-follow procedures for solving problems in everything from radioactive half-life to oxidation-reduction reactions. Considered to be the hardest mathematical problems to solve, word problems continue to terrify students across all math disciplines. This new title in the *World Problems* series demystifies these difficult problems once and for all by showing even the most math-phobic readers simple, step-by-step tips and techniques. *How to Solve World Problems in Calculus* reviews important concepts in calculus and provides solved problems and step-by-step solutions. Once students have mastered the basic approaches to solving calculus word problems, they will confidently apply these new

mathematical principles to even the most challenging advanced problems. Each chapter features an introduction to a problem type, definitions, related theorems, and formulas. Topics range from vital pre-calculus review to traditional calculus first-course content. Sample problems with solutions and a 50-problem chapter are ideal for self-testing. Fully explained examples with step-by-step solutions. This is the workbook of Volume 7 of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume: Miss Lee's class has 25 students and each student has read 4 books during the month. If the number of books all the students in Miss Lee's class read is twice the number of books all the students in Mr. Smith's class have read, how many books have the students in Mr. Smith's

class read altogether? Reasoning and solution: Let's first find how many books all the students in Miss Lee's class have read: Each student reads 4 books so 25 students read 25 groups of 4 books. Since each student reads the same number of books we can use the 3 elements formulas to solve the problem: We use multiplication to find the total number of books that all the students in Miss Lee's class read: $4 \times 25 = 100$ books. Twice = 2 groups of so we can use the 3 elements formulas to solve the problem: 100 books are twice or 2 groups of the number of books that all the students in Mr. Smith's class have read or 100 books are 2 groups of the number of books that all the students in Mr. Smith's class read. We divide the number of groups, 2, into the total number of books, 100, to find the amount in each group or the number of books that all the students in Mr. Smith's class have read: $100 \div 2 = 50$ books. The students in Mr. Smith's class read a total of 50 books. The techniques and strategies on using

addition equations, subtraction equations, multiplication and division equations and 3 elements formulas to solve word problems with algebra, the techniques on finding fractional parts and on doing fraction addition and subtraction, and the techniques on finding the area and the perimeter of squares and rectangles are covered in the volume. There is more in the volume than what is mentioned. Detailed explanations of the reasoning and solving strategies for each and every problem in Volume 7 are given in Volume 7 Answer Key. This anxiety-quelling guide helps you get ready for those daunting word problems, one step at a time. With fully explained examples, it shows you how easy it can be to translate word problems into solvable math problems. Say the words, "word problem" and you will see the majority of students cringe. Along with fractions, many students find the idea of working word problems tedious and unnecessary. However, this is quite the contrary. We use words every

day to verbalize our needs, wants, and desires. We complete word problems every day. Yet, it seems that once those same complex problems that we work each day are transferred to the pages of a mathematics book, homework assignment, or exam they become "undoable." With a well-organized and consistent strategy, you will find word problems are doable. They require critical thinking and problem-solving skills. Using the 7- Moves Method, you will take a "I did it in my head strategy" and transcribe it in a format that is understandable, gradable, and truly representative of appropriate mathematical formulas and equations. Word problems are the most difficult part of any math course -- and the most important to both the SATs and other standardized tests. This book teaches proven methods for analyzing and solving any type of math word problem. This is the workbook of the twelfth volume of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation

in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you will need to solve word problems. Sample question in this volume: Peter has read 120 pages of a book that he has just borrowed from the library. If the number of pages he has read is $\frac{2}{5}$ less than the number of pages he has not read yet, how many pages does the book have? Reasoning and solution: From "the number of pages he has read is $\frac{2}{5}$ less than the number of pages he has not read yet" (the noun phrase after the word "than") is the amount in 1 whole and the number of pages he has read is in a fractional part that is $\frac{2}{5}$ less than the fractional part the number of pages he has not read yet is in, 1, so the number of pages he has read is in a fractional part that is $\frac{2}{5}$ less than 1 or is $(1 - \frac{2}{5})$ or is $\frac{3}{5}$ of 1 whole. He has read 120 pages so we divide $\frac{3}{5}$ into the amount in it, 120, to find the amount in 1 whole, the number

of pages he has not read yet: $120 \div \frac{3}{5} = 120 \times \frac{5}{3} = 200$ pages. The number of pages that he has not read is 200 pages. ...The techniques and strategies on using algebraic equations to solve word problems and on solving proportions, surface area, volume and area of lateral surface of cylinders and cones are also reviewed in the book. This book also reviews on using one set of 3 elements formulas and 2 sets of 3 elements formulas to solve whole number word problems, decimal word problems and fraction word problems. Detailed explanations of the reasoning and solving strategies for each and every problem are given in the answer key. Most 9th grade math, or "Algebra 1," textbooks are structured in such a way that students find it extremely difficult to apply pertinent mathematical concepts and skills to the solving of word problems. * Provides helpful icons to aid in solving word problems * Keyed to National Council of Teachers of Mathematics (NCTM) standards for grades 6, 7, and 8 This is the workbook of Volume 9 of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume: Mom is 4 times as old as Chelsea. If she is 27 years older than Chelsea, how old is each? Reasoning and solution: From "Mom is 4 times as old as Chelsea," the age of Chelsea is the amount in 1 group and the age of Mom's is the amount in 4 groups. The difference between the amounts from the groups is 27. When we find the difference between the numbers of groups, we divide the difference between the numbers of groups into the difference between the amounts from the groups to find the amount in 1 group.

The difference between the numbers of groups is: $4-1=3$ We divide the difference between the number of groups, 3, into the difference between the amounts from the groups, 27, to find the amount in each group or the age of Chelsea: 27 For some students, the mere thought of solving a word problem can transform even the most confident among them into nervous wrecks. In her guidebook, Math Vitamins, retired educator Loretta Jean Everhart shares her methods of success that will help any student from Pre-K to fifth grade effectively solve even the most challenging word problems. Everhart taught elementary students for over thirty years and relies on her diverse experience working with students of all levels to offer useful techniques and step-by-step guidance that will lead parents and teachers through several ways to cope with math anxiety, improve math writing and vocabulary, and use cooperative learning to solve word problems. While providing simple strategies like having children work on jigsaw

puzzles to learn guess and test methodologies, Everhart also shares an in-depth exploration of Polya's four-step model, which helps children first understand the problem and then develop a plan on how to answer it. For the parent of a home-schooled child or for teacher who is searching for new ideas, this innovative guidebook offers practical tips and suggestions that will help lead struggling students out of the often tricky world of word problems and onto a successful path of future problem solving. Provides a simple approach to learning the mechanics of word-problem solving in geometry. Once they understand pre-algebra word problems, tests and homework are a breeze. If you want to improve your Algebra word problem-solving skills, this book is filled with what you need the most: Practice! "400 Practice Algebra Word Problems (With Help and Solutions)" will make a great standalone or supplemental practice guide for you if you're serious about developing your

math word problem-solving skills or raising your grades in school. It contains 400 practice word problems that will sharpen your skills at solving problems involving addition, subtraction, multiplication, division, mixed-operations, systems of equations, mixtures, rates and time, work, and even more! It starts simple and will gradually build your skills from the ground up by presenting word problems from basic to more difficult. And in case you come upon any word problem that gives you trouble, it provides sample equations for each word problem to give you a hint or a nudge in the right direction. Solutions are also given to ensure that you will arrive at the correct answers. But that's not all. "400 Practice Algebra Word Problems (With Help and Solutions)" also contains an entire section dedicated to giving you hints, tips, and useful tricks that they don't teach you in school to help you master the hardest part about solving word problems--translating the written words into mathematical equations. And unlike

other books, it won't lock you into a rigid, step-by-step solving process or force you to solve word problems in any particular way. It gives you the opportunity to practice and learn in the way that suits you best! So start practicing! A guide to solving math word problems on standardized tests that includes proven strategies, practice questions, and examples of completely worked solutions. Now you can use manipulatives to solve word problems without having to pick up and store all those little pieces! Students can see step-by-step how to approach a problem and solve it. The 110 problems per book can be done as whole class activities, in small groups, or individually on any brand of interactive whiteboard or computer or on paper. Give students that extra boost they need to acquire important concepts in specific areas of math. The goal of these How to books is to provide the information and practice necessary to master the math skills established by the National Council of Teachers of

Mathematics. Each book is divided into units containing concepts, rules, terms, and formulas, followed by corresponding practice pages. You can help prevent math anxiety by giving your children the mental tools they need to conquer story problems. Young children expect to look at a word problem and instantly see the answer. But as they get older, their textbook math problems also grow in difficulty, so this solution-by-intuitive-leap becomes impossible. Too often the frustrated child concludes, "I'm just not good at math." But with practice, any student can learn to master word problems. Word Problems from Literature features math puzzles for elementary and middle school students inspired by classic books such as Mr. Popper's Penguins and The Hobbit. Denise Gaskins demonstrates step by step how to solve these problems--and how to build a strong foundation of problem-solving skills that can handle any situation. And when you finish the puzzles in this book, Denise shows you how to create your own word

problems from literature, using your child's favorite story worlds. You'll love this book, because it prepares your children for mathematical success. Order your copy of Word Problems from Literature today. *** If you're using these word problems with your children, check out the companion Word Problems Student Workbook: Word Problems from Literature. If you want to set a solid foundation in math, grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume: Mr. Coach spent a total of \$240.00 for 6 soccer balls. If one basketball cost \$ 13.00 more than one soccer, how much did he pay for 12 basketballs? Reasoning and solution: To find how much he paid for 12 basketballs, we need to first know how much one basketball cost. To know how much one basketball cost, we need to know how much one soccer ball cost first. 6 soccer balls cost \$240.00. Each of the 6 soccer balls costs the same so we can use the 3 elements formulas to solve the problem: divide the number of soccer balls or the number of groups, 6, into the total amount, 240, to find the

amount in one group or how much each soccer ball costs: $240 \div 6 = \$40.00$ Since one basketball cost \$13 more than one soccer ball we add 13 to the cost of one soccer ball to find the cost of one basketball: $13 + 40 = \$53.00$ One basketball costs \$53.00 so 12 of them cost 12 groups of \$53.00. Each basketball costs the same so we can use the 3 elements formulas to solve the problem: We multiply the number of groups, 12, and the amount in each group, 53, to find the total amount in all the groups or the total cost of 12 basketballs: $12 \times 53 = \$636.00$ The techniques on using the 3 elements formulas to find the total amount in all the groups, the number of groups, and the amount in each group are reviewed and reinforced in this volume. The volume also reinforces the techniques on using the multiplication and division equations to solve word problems. There is more in the volume than what is mentioned. Detailed explanations of the reasoning and solving strategies for each and every problem in Volume 6 are given in this

book. This book explains the steps needed to solve word problems. It begins with problem-solving steps and tips, and then guides readers through the information they need to solve the problem. It covers topics such as looking for patterns and drawing a picture. The reader also learns about logical thinking, and how to work backwards to solve the problem. Become a better problem solver with SOLVING ALGEBRA WORD PROBLEMS! Designed to give you practice applying a five-step problem-solving strategy to a variety of problem types, this mathematics text provides you with the practice and support you need to succeed in math. The most common types of word problems that are encountered in elementary and intermediate algebra textbooks are included to help you become a better problem solver, build confidence, and decrease anxiety.
