Alexander the Great's life and career are here examined through the major issues surrounding his reign. What were Alexander's ultimate ambitions? Why did he pursue his own deification while alive? Did he actually set the world in 'a new groove' as has

been claimed by some scholars? And was his death natural or the result of a murderous conspiracy? Each of the key themes, arranged as chapters, will be presented in approximately chronological order so that readers unfamiliar with the life of Alexander will be able to follow the narrative. The themes are tied to the major controversies and questions surrounding Alexander's career and legacy. Each chapter includes a discussion of the major academic positions on each issue, and includes a full and up-to-date bibliography and an evaluation of the historical evidence. All source material is in translation. Designed to bring new clarity to the contentious history of Alexander the Great, this is an ideal introduction to one of history's most controversial figures.

Has supplement: *The Literature of American legal history. Statistical Methods and the Improvement of Data Quality* contains the proceedings of The Small Conference on the Improvement of the Quality of Data Collected by Data Collection Systems, held on November 11-12, 1982, in Oak Ridge, Tennessee. The conference provided a forum for discussing the use of statistical methods to improve data quality, with emphasis on the problems of data collection systems and how to handle them using state-of-the-art techniques. Comprised of 16 chapters, this volume begins with an overview of some of the limitations of surveys, followed by an annotated bibliography on frames from which the probability sample is selected. The reader is then introduced to sample designs and methods for collecting data over space and time; response effects to behavior and attitude questions; and how to develop and use error profiles. Subsequent chapters focus on principles and methods for handling outliers in data sets; influence functions, outlier detection, and data editing; and application of pattern recognition techniques to data analysis. The use of exploratory data analysis as an aid in modeling and statistical forecasting is also described. This monograph is likely to be of primary benefit to students taking a general course in survey sampling techniques, and to individuals and groups who deal with large data collection systems and are constantly seeking ways to improve the overall quality of their data.

This book tells the story of the rise and decline of the United Electrical, Radio, and Machine Workers of America (UE) from 1933 to 1990. Once the third-largest industrial union in the United States, the UE was the most powerful left-wing institution in U.S. history and arguably the most significant victim of the anti-communist purges that marked post-World War II America. This is an institutional study of the formation of the UE and the struggle for its control by left-wing and right-wing factions. Unlike most books on unions during the Cold War, this study carries the story up to the present, showing the long-term effects of the ideological battles.

Volume 44, devoted solely to the vital research areas concerning the biogeochemistry of metals and their transport in the environment and availability to living systems, offers 9 timely and authoritative chapters on these fascinating topics by 19 internationally recognized experts. In this study of the breakdown of traditional party loyalties and voting patterns, prominent comparativists and country specialists examine the changes now occurring in the political systems of advanced industrial democracies. Originally published in 1985. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly

increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. 1970 includes special supplement: Concise explanation of the Tax Reform Act of 1969. The accumulation of ice in its various forms on structures has long been recognized as a significant and costly problem for both industry and government world-wide. The purpose of this First International Workshop on Atmospheric Icing of Structures was to bring together scientists, engineers and managers from industrial and military organizations from around the world that have an interest in the accretion of ice on structures. The presumption underlying the use of 'First' in the title of the workshop is that this meeting would demonstrate the need for continued exchange of ideas, of reports of work accomplished and of future plans, and further identification of research areas requiring particular attention. The 39 papers from 10 countries presented at the workshop were organized into four technical sessions representing the various aspects of structural ice accretion studies underway. Topics included: Basic research; Physics of ice accretion; Simulation and modeling; Design-oriented research; Meteorological measurements and damage observations; and Iceload measurements and design practices. In *Museums for a New Century: A Report of the Commission on Museums for a New Century*, leaders in the museum community explore and identify trends affecting the future of museums and describe the opportunities and responsibilities facing museums in the 21st century.
