The degree of inquiry will depend on the nature, validity, and seriousness of the complaint. See reference (b). MANDATORY REFERRAL TO NCIS: Reference (c) mandates that certain incidents be referred to NCIS whether occurring on or off base and regardless of civilian investigation involvement. These incidents include: Actual, suspected, or alleged major criminal offenses (punishable under the Uniform Code of Military Justice (UCMJ) by more than 1 year of confinement); Non-combat deaths when the cause of death is not medically attributable to disease or natural causes; Fires or explosions of unknown origin affecting Department of the Navy (DON) property or property under DON control; Theft or loss of ordnance or controlled substances; Disappearance of a command member; All instances of suspected fraud against the government within DON (e.g., theft of government property, bribery, false claims for pay, etc.); actual or suspected acts of espionage, terrorism, sabotage, assassination, and actual, suspected, or attempted defection of DON personnel; Internal security incidents, such as loss, compromise, or suspected compromise of classified information and national security cases; and Suspected sex-related offenses as defined under Articles 120 and 125 of the UCMJ. WHEN NCIS DECLINES TO INVESTIGATE: NCIS may, at its discretion, decline to conduct or continue any investigation, but shall expeditiously inform the effected command. A command may then request assistance from the local base security department or

appropriate authority or pursue a command investigation pursuant to reference (a). Over 5,300 total pages MARINE RECON
Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions behind enemy lines. Employed as part of the Marine Air-Ground Task Force, reconnaissance teams provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a Reconnaissance team conduct depends on how deep in the battle space they are operating. Division Reconnaissance units support the close and distant battlespace, while Force Reconnaissance units conduct deep reconnaissance in support of a landing force. Common missions include, but are not limited to: Plan, coordinate, and conduct amphibious-ground reconnaissance and surveillance to observe, identify, and report enemy activity, and collect other information of military significance. Conduct specialized surveying to include: underwater reconnaissance and/or demolitions, beach permeability and topography, routes, bridges, structures, urban/rural areas, helicopter landing zones (LZ), parachute drop zones (DZ), aircraft forward operating sites, and mechanized reconnaissance missions. When properly task organized with other forces, equipment or personnel, assist in specialized engineer, radio, and other special reconnaissance missions. Infiltrate mission areas by necessary means to include: surface, subsurface and airborne operations. Conduct Initial Terminal Guidance (ITG) for helicopters, landing craft, parachutists, air-delivery, and re-supply. Designate and engage selected targets with organic weapons and force fires to support battlespace shaping. This includes designation and terminal guidance of precision-guided munitions. Conduct post-strike reconnaissance to determine and report battle damage assessment on a specified target or area. Conduct limited scale raids and ambushes. This right is considered the most significant exception to the fundamental principle of the freedom of the high seas (the freedom, in peacetime, to remain free of interference by ships of another flag). It is this freedom that has been challenged by a recent significant increase in interceptions to counter the threats of international terrorism and WMD proliferation, or to

suppress transnational organised crime at sea, particularly the trafficking of narcotics and smuggling of migrants. The author questions whether the principle of non-interference has been so significantly curtailed as to have lost its relevance in the contemporary legal order of the oceans. The book begins with an historical and theoretical examination of the framework underlying interception. This historical survey informs the remainder of the work, which then looks at the legal framework of the right of visit, contemporary challenges to the traditional right, interference on the high seas for the maintenance of international peace and security, interferences to maintain the 'bon usage' of the oceans (navigation and fishing), piracy 'j'ure gentium' and current counter-piracy operations off the coast of Somalia, the problems posed by illegal, unregulated and unreported fishing, interdiction operations to counter drug and people trafficking, and recent interception operations in the Mediterranean Sea organised by FRONTEX. It provides comprehensive coverage of the different dimensions of maritime security in order to assess how responses to maritime security concerns are, and should be, shaping the law of the sea. The discussion canvasses passage of military vessels and military activities at sea, law enforcement activities across the different maritime zones, information sharing and intelligence gathering, as well as armed conflict and naval warfare. In doing so, this book not only addresses traditional security concerns for naval power but also examines responses to contemporary maritime security threats, such as terrorism, weapons of mass destruction, piracy, drug-trafficking, environmental damage and illegal fishing. While the protection of sovereignty and national interests remain fundamental to maritime security and the law of the sea, there is increasing acceptance of a common interest that exists among states when seeking to respond to a variety of modern maritime security threats. It is argued that security interests should be given greater scope in our understanding of the law of the sea in light of the changing dynamics of exclusive and inclusive claims to ocean use. More flexibility may be required in the interpretation and application of the UN Convention on the Law of the Sea if appropriate responses to ensure maritime security are to be allowed. February issue includes Appendix entitled Directory of United States Government periodicals and subscription publications; September issue includes List of depository libraries; June and December issues include semiannual index Customary International Humanitarian Law, Volume I: Rules is a comprehensive analysis of the customary rules of international humanitarian law applicable in international and non-international armed conflicts. In the absence of ratifications of important treaties in this area, this is clearly a publication of major importance, carried out at the express request of the international community. In so doing, this study identifies the common core of international humanitarian law binding on all parties to all armed conflicts. The concept that certain objects and persons may be legitimately attacked during armed conflicts has been well recognised and developed through the history of warfare. This book explores the relationship between international law and targeting practice in determining whether an object is a lawful military target. By examining both the interpretation and its post-ratification application this book provides a comprehensive analysis of the definition of military objective adopted in 1977 Additional Protocol I to the four 1949 Geneva Conventions and its use in practice. Tackling topical issues such as the targeting of TV and radio stations or cyber targets, Agnieszka Jachec-Neale analyses the concept of military objective within the context of both modern military doctrine and the major coalition operations which have been

undertaken since it was formally defined. This monograph will be of great interest to students and scholars of international law and the law of armed conflict, as well as security studies and international relations. The new edition takes account of recent developments in the law, including the 2010 amendments to the ICC Statute, the progressive evolution of customary law, and new jurisprudence from national and international courts and tribunals. It sheds light on controversial topics like direct participation in hostilities; air and missile warfare; belligerent occupation; operational detention; and the protection of the environment in armed conflict. The book also addresses the growing need to consider the interface between international humanitarian law and human rights, as well as other branches of international law, both during armed conflicts and in post-conflict situations. The commentary both deepens reflection on such innovations, and critically reconsiders views expressed in earlier editions to provide a contemporary analysis of this changing field. Renowned international lawyers offer a broad spectrum of legal opinions, restating the law in this area, which is applicable worldwide. Particular attention is paid to problems of application of the law in recent military campaigns, which are assessed and interpreted in a practice-oriented manner. Based on best-practice rules of global importance, this book gives invaluable guidance to practitioners and scholars of this important body of law. BOTH MANUALS: Approved for public release; distribution unlimited. DESCRIPTION. This manual contains the complete operating instructions and procedures for UH-60A, UH-60Q, UH-60L, and EH-60A helicopters. The primary mission of this helicopter is that of tactical transport of troops, medical evacuation, cargo, and reconnaissance within the capabilities of the helicopter. The observance of limitations, performance, and weight and balance data provided is mandatory. The observance of procedures is mandatory except when modification is required because of multiple emergencies, adverse weather, terrain, etc. Your flying experience is recognized and therefore, basic flight principles are not included. IT IS REQUIRED THAT THIS MANUAL BE CARRIED IN THE HELICOPTER AT ALL TIMES. In U.S. Military Operations: Law, Policy, and Practice, a distinguished group of military experts comprehensively analyze how the law is applied during military operations on and off the battlefield. Subject matter experts offer a unique insiders perspective on how the law is actually implemented in a wide swath of military activities, such as how the law of war applies

in the context of multi-state coalition forces, and whether non-governmental organizations involved in quasi-military operations are subject to the same law. The book goes on to consider whether U.S. Constitutional 4th Amendment protections apply to the military's cyber-defense measures, how the law guides targeting decisions, and whether United Nations mandates constitute binding rules of international humanitarian law. Other areas of focus include how the United States interacts with the International Committee of the Red Cross regarding its international legal obligations, and how courts should approach civil claims based on war-related torts. This book also answers questions regarding how the law of armed conflict applies to such extra-conflict acts as intercepting pirates and providing humanitarian relief to civilians in occupied territory. A comprehensive examination of the legal limits to the military commander's assessment of military necessity during armed conflict. The second edition of this well received handbook provides a comprehensive overview and

annotated commentary of those areas of international law most relevant to the planning and conduct of military operations. It covers a wide scope of military operations, ranging from operations conducted under UN Security Council mandate to (collective) self-defence and consensual and humanitarian operations and identifies the relevant legal bases and applicable legal regimes governing the application of force and treatment of persons during such operations. It also devotes attention to the law governing the status of forces, military use of the sea and airspace and questions of international (criminal) responsibility for breaches of international law. New developments such as cyber warfare and controversial aspects of law in relation to contemporary operations, such as targeted killing of specific individuals are discussed and analysed, alongside recent developments in more traditional types of operations, such as peacekeeping and naval operations. The book is aimed at policy officials, commanders

and their (military) legal advisors who are involved with the planning and conduct of any type of military operation and is intended to complement national and international policy and legal guidelines and assist in identifying and applying the law to ensure legitimacy and contribute to mission accomplishment. It likewise fulfils a need in pertinent international organizations, such as the UN, NATO, Regional Organizations, and NGOs. It also serves as a comprehensive work of reference to academics and is suitable for courses at military staff colleges, academies and universities, which devote attention to one or more aspects of international law treated in the book. This mix of intended users is reflected in the contributors who include senior (former) policy officials and (military) legal advisors, alongside academics engaged in teaching and research in these areas of international law. Covering all the essentials of turbine aircraft, this guide will prepare readers for a turbine aircraft interview, commuter ground school, or a new jet job.
