Borderland Birds includes almost 100 birds that I have encountered along the southern border from Arizona to the Gulf. Many are "specialty birds, species that cannot be found elsewhere in the U.S. Examples include chachalaca, red-billed pigeon, hook-billed kite, aplomado falcon, ferruginous pygmy-owl, elegant trogon, blue-throated and lucifer hummingbirds, Mexican and green jays, Audubon's and Altamira orioles, pyrrhuloxia, varied bunting, and Colima and rufous-capped warblers. All of the birds are illustrated with photographs by Greg Lasley, Kelly Bryan, Bob Behrstock, and Martin Reid. In The Hopes of Snakes, Lisa Couturier brings together the best of her essays on urban and suburban nature throughout the Northeast, from Washington, DC, to Boston. Her sharp eye and deep humanity have found what is remarkable in city nature and illuminated it for readers like no one before her. A pocket-sized comprehensive field-guide for the neotropical avifaunas. It features texts, maps and illustrations for various birds recorded in Colombia, including offshore islands. Every species is illustrated and various non-pelagic species are mapped. Handbook of Veterinary Neurology provides quick access to vital information on neurologic conditions in a wide range of species, including canine, feline, bovine, caprine, equine, ovine, and porcine. A problem-oriented approach makes it easy to diagnose and treat neurologic problems in small and large animals. The coverage of disorders by problem, not by established disease diagnosis, emulates how animals present to the veterinary hospital and simplifies the formulation of a correct diagnosis. Within each chapter, discussions of neurologic disease include a review of the localization criteria and the diseases that can cause that problem, plus treatment and surgical techniques. Lead author Michael D. Lorenz brings decades of experience to neurologic assessment, using a diagnostic approach that requires minimal knowledge of neuroanatomy. A problem-based approach is organized by presenting sign rather than by condition, guiding you to logical conclusions regarding diagnosis and treatment. Algorithms diagram the logic necessary to localize lesions and to formulate diagnostic plans. Coverage of current diagnostic techniques includes the use of diagnostic tools, such as radiology, spinal fluid analysis, electrodiagnosis, and MR imaging. Case histories in each chapter present a problem and the results of the neurologic examination, then ask you to solve the problem by localizing the lesion, listing probable causes, and making a diagnostic plan. Answers are provided at the back of the book. A consistent format for each case history includes signalment, history, physical examination findings, and neurologic examination. A comprehensive appendix describes species and breeds that have a congenital predisposition for particular neurologic diseases. Extensive

references make it easy to pursue in-depth research of more advanced topics. A companion website includes 20 narrated video clips with accompanying PowerPoint slides that correlate to the case histories in the book, covering neurologic assessment and clinical problems such as paresis of one limb, tetraparesis, stupor, seizures, ataxia of the head and limbs, and cranial nerve disorders. Two new co-authors, Jean Coates and Marc Kent, board-certified in neurology, enhance the credibility of this edition. A full-color design and numerous illustrations include enhanced images of neuroanatomy and pathology. As global climate change proliferates, so too do the health risks associated with the changing world around us. Called for in the President's Climate Action Plan and put together by experts from eight different Federal agencies, *The Impacts of Climate Change on Human Health: A Scientific Assessment* is a comprehensive report on these evolving health risks, including: Temperature-related death and illness Air quality deterioration Impacts of extreme events on human health Vector-borne diseases Climate impacts on water-related Illness Food safety, nutrition, and distribution Mental health and well-being This report summarizes scientific data in a concise and accessible fashion for the general public, providing executive summaries, key takeaways, and full-color diagrams and charts. Learn what health risks face you and your family as a result of global climate change and start preparing now with *The Impacts of Climate Change on Human Health*. The population explosion that began in the 1960s has been accompanied by a decrease in the quality of the natural environment, e.g. pollution of the air, water and soil with essential and toxic trace elements. Numerous poisonings of people and animals with highly toxic anthropogenic Hg and Cd in the 20th century prompted the creation of the abiotic environment, mainly in developed countries. However, the system is insufficient for long-term exposure to low concentrations of various substances that are mainly ingested through food and water. This problem could be addressed by the monitoring of sentinels – organisms that accumulate trace elements and as such reflect the rate and degree of environmental pollution. Usually these are long-lived vertebrates – herbivorous, omnivorous and carnivorous birds and mammals, especially game species. This book describes the responses of the sentinels most commonly used in ecotoxicological studies to 17 trace elements. A touching story about a blind jazz trumpeter and how she responds to her bullying father, a twisted preacher, and a woman tormented by "Furies." She is captivated by simple pleasures, like feeling the shape and texture of leaves and listening to the pure tones of a trumpet played in the forest. Intelligent, clever, and imaginative, Angela uses courage and wit to deal with the joys and disappointments in her life. This unique tale brings you to a world of darkness, guided only by a sounds, texture, and the dictates of the heart. *Songbirds of the West* includes more than four dozen songbirds that occur within the western United States. The majority are found in America's western National Parks, especially in parks where the author worked for more than a quarter of a century. Big Bend National Park is where he encountered Black-capped and Gray Vireos, Vermilion Flycatchers, Curve-billed and Crissal Thrashers, Hepatic and Summer Tanagers, and Black-vented, Hooded and Scott's Orioles. Black-billed Magpies were encountered at Great Sand Dunes, Clark's Nutcrackers at Crater Lake, Cave Swallows at Carlsbad Caverns, Cactus Wrens at Saguaro, Phainopeplas at Organ Pipe, Steller's and Gray Jays at Yellowstone, Black-throated Gray Warblers at Mesa Verde, Townsend's Solitaires at Timpanogos Cave, and Canyon and Rock Wrens at Zion. Great Kiskadees, Green Jays, and Altamira Orioles were encountered in the Lower Rio Grande Valley of Texas. The discussion of each bird is based on the author's personal encounters. These range from casual observations to scientific studies which were undertaken in both the U.S. and Mexico; still others involved visits to the West Indies. The bird's life history, behavior and status are included. Whether it's the sudden, plunging dives of Brown Pelicans, the singing and aerial displays of Northern Mockingbirds, or the communal nesting of Purple Martins, innate and learned behaviors are some of the most fascinating things to observe in Texas birds. Even casual birdwatchers eventually ask, "why do they do that?" while serious birders and ornithologists seek to understand all the behaviors involved in feeding, flying, mating, and rearing young. But until now, it has been hard to find this information in one handy source. In this comprehensive, yet easy-to-use book, Kent Rylander distills data from many sources to provide an authoritative guide to the behavior of Texas birds. He begins by explaining the principles of animal behavior and illustrating how they can be applied to interpreting bird behaviors in the field. The majority of the book is devoted to accounts of more than 400 species of birds that are most likely to be encountered by Texas birdwatchers. Each account describes such behaviors as feeding, courtship, parenting, and other behaviors that are significant for that species. References to interesting and important articles from scientific journals are incorporated in the species accounts where appropriate, and line drawings illustrate some of the behaviors described. Why "the balance of nature"? Resilience. Temporal variability and the individual species. The effects of food-web structure. The variability of the environment. Nonlinear dynamics, strange attractors, and chaos. Extinctions. Species differences and community structure as explanations of why introductions fail. Patterns in species composition. Food-web structure and community persistence. Community assembly; or why are there so many kinds of communities? Small-scale experimental removals of species. Food webs and resistance. Changes in total density and species composition. The consequences of introductions and extinctions. Multispecies models and their limitations. Conclusions and caveats. Roland Wauer worked as Big Bend National Park's Chief Naturalist from 1966 to 1972. His journal entries span these 30 years. This beautifully illustrated book is the perfect companion for a visit to the park, whether in person or by armchair. 30 photos. 30 line drawings. Using scientific research and easily understood interpretations, Roland H. Wauer covers many topics, such as the falcon's keen eye sight; its amazing migration patterns; its eating habits; and its hunting styles. At the heart of the book is a complete natural history including courtship routines. Foreword by William S. Clark. Dental implants have become one of the most popular and rapidly growing techniques for replacing missing teeth. A detailed map of the area is provided, and there are 17 photographs and 8 paintings in full color.--Cover A fascinating account of the astonishing growth of birding into a major pastime and recreational industry, as well as the author's evolution as a birder and conservationist In this groundbreaking book, Scalia and Garner systematically explain all the most important principles of constitutional, statutory, and contractual interpretation in an engaging and informative style with hundreds of illustrations from actual cases. Is a burrito a sandwich? Is a corporation entitled to personal privacy? If you trade a gun for drugs, are you using a gun in a drug transaction? The authors grapple with these and dozens of equally curious questions while explaining the most principled, lucid, and reliable techniques for deriving meaning from authoritative texts. Meanwhile, the book takes up some of the most controversial issues in modern jurisprudence. What, exactly, is textualism? Why is strict construction a bad thing? What is the true doctrine of originalism? And which is more important: the spirit of the law, or the letter? The authors write with a well-argued point of view that is definitive yet nuanced, straightforward yet sophisticated. "As a means of defining the purpose of the problem, the following objectives were considered: (1) to list the species of birds observed in Denton and neighboring counties; (2) to assign a descriptive status to each species; (3) to estimate the relative abundance of each species (4) to annotate the list with data from other sources, when additional data provide a more accurate and complete description of the status of the species in Denton County; (5) to designate the section of the county in which each species was most frequently observed; and (6) to briefly summarize the changes in bird populations during the period 1950-1956, and to suggest some hypotheses whihc help explain these changes."--Leaf 6.
