There is a misunderstanding that you must have the latest hardware in order to learn the commands necessary for clearing the exam. This is not true. The latest IOS releases do require more RAM and processing power to run. HOWEVER, most commands covered have been in the earlier IOS releases many years ago. There are a few new commands, and you can learn about their usage via the various documentations available. FYI, the Catalyst switches were originally designed to run CatOS,

which specialized in layer 2 functionalities. Newer switch models are all using IOS. CatOS and its set commands are seldom tested in the modern Cisco exams these days.
