Theory of Literature was born from the collaboration of Ren Wellek, a Vienna-born student of Prague School linguistics, and Austin Warren, an independently minded "old New Critic." Unlike many other textbooks of its era, however, this classic kowtows to no dogma and no party line. Wellek and Warren looked at literature as both a social product--influenced by politics, economics, etc.--as well as a self-contained system of formal structures. Incorporating examples from Aristotle to Coleridge, written in clear, uncondescending prose, Theory of Literature is a work which, especially in its suspicion of simplistic explanation and its distrust of received wisdom, remains extremely relevant to the study of literature.

Reclaiming Church, J.J. Warren continues his call to reaffirm the Church be welcoming to all, including young people like those he led at Sarah Lawrence College who "didn't know God could love them because their churches said God didn't." The book addresses three points of importance to young people looking to be part of a church community, and a fourth: 1. The identity and nature of God 2. The role of Scripture in discerning God's call 3. The author's own experience of God, church, and identity In the final chapter, "We Are the Church," Warren focuses on practical and positive steps for joining voices, being heard, building bridges, and working together for young people to reclaim Church in their lives.

Features • Affirms to the LGBTQ community and those who love them that the Church

all. • Inspires younger progressive people to stay within the Church and work to renew the call of ministry. • Explores the Church's beginnings and emphasis on community. • Calls readers to focus on practical and positive steps to reclaim Church in their lives. The Purpose-Driven Life is a blueprint for Christian living in the 21st century-a lifestyle based on God's eternal purposes, not cultural values. First published by Methuen in 1988, Game Plan is not the typical, traditional, how-to business book. It is different in numerous ways from most business books that either bog you down with information overload or drive you to tears with text book techniques. The book is written from a lighthearted standpoint, using simple examples and can be read in less than two hours. If a reader needs specific help with a concept, for no additional charge, they can check out gameplanbook.com for articles, examples and resources that address their specific issue. The traditional working papers include problem-specific forms for preparing solutions for Exercises, A & B Problems, the Continuing Problem, and the Comprehensive problems from the textbook. These forms, with preprinted headings, provide a structure for the problems, which helps students get started and saves time. New to this edition: All forms have been updated to coincide with core concept changes. Give your students a solid foundation in core accounting concepts while helping learners develop a true appreciation for why accounting is important to business and a prosperous society. Warren/Reeve/Duchac's FINANCIAL AND MANAGERIAL ACCOUNTING, 14E clearly demonstrates how accounting is much more than simply data and black and white rules. Instead, students see how accounting provides key information used to make critical business decisions. A new chapter schema provides context for how each chapter's content fits into the big picture. The book focuses on why accounting is important and consistently reinforces connections to the big picture by connecting journal entries to the accounting equation. Fresh organization progresses from the simplest to the more complex topics with reorganized and fully integrated coverage of the new Revenue Recognition standard, reorganized coverage of adjustments, and reorganized managerial accounting chapters. Meet Jeremy Dunderman, the most extremely awesome scientific mind of our generation. Too bad everyone's too busy bullying him or just generally disliking him to realize it. But that all ends today. Jeremy has invented the Reality Alternative Dimension (R.A.D. for short), a device that allows Rex Raditude, the Pizzasaurus, to enter our dimension. He's a guitar-shredding, pizza-loving party animal with only one thing on his mind: BEING TOTALLY RAD, DUDE. But is that enough to stop Emperor Buzzkill and his horde of hapless minions who are bent on ending pizza parties, skateboarding, and all things rad? Can poor, pitiful Jeremy Dunderman, quite possibly the dorkiest dude in the universe, help in defeating them? An alternative history of software that places the liberal arts at the

center of software's evolution. In *The Software Arts*, Warren Sack offers an alternative history of computing that places the arts at the very center of software's evolution. Tracing the origins of software to eighteenth-century French encyclopedists' step-by-step descriptions of how things were made in the workshops of artists and artisans, Sack shows that programming languages are the offspring of an effort to describe the mechanical arts in the language of the liberal arts. Sack offers a reading of the texts of computing—code, algorithms, and technical papers—that emphasizes continuity between prose and programs. He translates concepts and categories from the liberal and mechanical arts—including logic, rhetoric, grammar, lexicography, algorithm, language, and simulation—into terms of computer science and then considers their further translation into popular culture, where they circulate as forms of digital life. He also considers, among other topics, the “arithmetization” of knowledge that presaged digital computing; today's multitude of logics; the history of demonstration, from deduction to newer forms of persuasion; and the post-Chomsky absence of meaning in grammar. With *The Software Arts*, Sack invites artists and humanists to see how their ideas are at the root of software development and computer scientists to envision themselves as artists and humanists.
