Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime, dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. This book provide a comprehensive set of modeling methods for data and uncertainty analysis, taking readers beyond mainstream methods and focusing on techniques with a broad range of real-world applications. The book will be useful as a textbook for graduate students, or as a training manual in the fields of calibration and testing. The work may also serve as a reference for metrologists, mathematicians, statisticians, software engineers, chemists, and other practitioners with a general interest in measurement science. This book presents practical approaches for facilitating the achievement of excellence in the management and leadership of organizational resources. It shows how the principles of creating shared value can be applied to ensure faster learning, training, business development, and social renewal. In particular, it presents novel methods and tools for tackling the complexity of management and learning in both business organizations and society. Discussing ontologies, intelligent management systems, methods for creating knowledge and value added, it offers novel insights into time management and operations optimization, as well as advanced methods for evaluating customers' satisfaction and conscious experience. Based on two conferences, the AHFE 2018 International Conference on Human Factors, Business Management and Society, and the AHFE 2018 International Conference on Human Factors in Management and Leadership, held on July 21-25, 2018, in Orlando, Florida, USA, the book provides both researchers and professionals with new tools and inspiring ideas for achieving excellence in various business activities. Chapter "Convolutional Gravitational Models for Economic Exchanges: Mathematical Extensions for Dynamic Processes and Knowledge Flows" is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com. A little more than 3 billion people have access to basic mobile telephony, with 48% living close to or below the poverty line. These people, the so-called 'mass market', lack access to basic communications technology. An ongoing issue facing communications providers is how to facilitate and promote communications access to those who live in rural areas of developing economies. The authors utilize their considerable 'hands on' experience of working in successful telecommunications companies in order to address the challenges of creating, facilitating and maintaining sustainable telecommunications growth in developing nations. With this focus in mind the authors present a snapshot of these countries through real life case studies. Sustainable Telecoms Growth in Developing Economies: Presents innovative and sustainable business models to address telecommunications adoption in developing countries. Identifies the inherent drivers and barriers in the mass-market adoption of mobile services in developing economies. Discusses the impact and importance of telecoms in developing nations including customer needs and Internet-based services. Highlights the current state of communications in such markets. Includes real-world case studies and interviews with telecoms CEOs from all over the world. The author team provides decision makers, professionals, and application developers in IT, telecommunications and media with a thorough understanding of the current state and future evolution of sustainable telecommunications in developing countries. The book will also be of interest to advanced students in electrical engineering and telecommunications, analysts, and consultants with an interest in growing economies. Drug abuse and addiction are common in clinical practice. Often they interfere with patient treatment or require an alternative approach. Drug Abuse and Addiction in Medical Illness: Causes, Consequences, and Treatment is a major contribution to the literature, a gold standard title offering a comprehensive range of topics for those who care for patients with addiction, conduct research in this area, or simply have an interest in the field. Offering state-of-the-art information for all those working with drug abusing or addicted patients, or for those interested in this topic from other research perspectives, the volume is a first of its kind book -- rich, comprehensive, yet focused, addressing the needs of the very active theoretical, basic, and clinical research in the field. Comprised of 46 chapters organized in four sections and developed by the leading international experts, Drug Abuse and Addiction in Medical Illness: Causes, Consequences, and Treatment covers virtually every core, as well as contemporary, topic on addiction, from the established theories to the most modern research and development in the field. Enhancing the educational value of the volume, every chapter includes an abstract and two boxes summarizing learning objectives and directions for future research. Drug Abuse and Addiction in Medical Illness: Causes, Consequences, and Treatment discusses the topic in a authoritative, systematic manner and is an indispensable reference for all clinicians and researchers interested in this rapidly changing field. Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime, dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. The Hungarian artist-designer László Moholy-Nagy, the Austrian sociologist Paul Lazarsfeld, and his fellow Viennese Victor Gruen—an architect and urban planner—made careers in different fields. Yet they shared common socialist politics, Jewish backgrounds, and experience as refugees from the Nazis. This book tells the story of their intellectual migration from Central Europe to the United States, beginning with the collapse of the Habsburg Empire, and moving through the heady years of newly independent social-democratic republics before the descent into fascism. It follows their experience of exile and adaptation in a new country, and culminates with a surprising outcome of socialist thinking: the opening of the first fully enclosed, air-conditioned suburban shopping center in the United States. Although the American culture they encountered ostensibly celebrated entrepreneurial individualism and capitalistic "free enterprise," Moholy-Nagy, Lazarsfeld, and Gruen arrived at a time of the progressive economic reforms of the New Deal and an extraordinary open-mindedness about social democracy. This period of unprecedented economic experimentation nurtured a business climate that, for the most part, did not stifle the émigrés' socialist idealism but rather channeled it as the source of creative solutions to the practical problems of industrial design, urban planning, and consumer behavior. Based on a vast array of original sources, Malherek interweaves the biographies of these three remarkable personalities and those of their wives, colleagues, and friends with whom they collaborated on innovative projects that would shape the material environment and consumer culture of their adopted home. The result is a narrative of immigration and adaptation that challenges the crude binary of capitalism and socialism with a story of creative economic hybridization. Retailing is one of the biggest and most important sectors in today's economy. Graduates who are seeking a career in the sector will therefore require a solid knowledge of its core principles. The Principles of Retailing Second Edition is a

topical, engaging and authoritative update of a hugely successful textbook by three leading experts in retail management designed to be a digestible introduction to retailing for management and marketing students. The previous edition was praised for the quality of its coverage, the clarity of its style and the strength of its sections on operation and supply chain issues such as buying and logistics, which are often neglected by other texts. This new edition has been comprehensively reworked in response to the rapid changes to the industry, including the growth of online retail and the subsequent decline of physical retail space and new technologies that improve customer experience and help track consumer behaviour. It also builds upon the authors' research over the last decade with new chapters on offshore sourcing and CSR and product management in addition to considerable revisions to existing chapters to highlight changes in online retailing and e-tail logistics, retail branding, retail security, internationalisation and the fashion supply chain. This edition will also be supported by a collection of online teaching materials to help tutors spend less time preparing and more time teaching. This book covers the emerging and important topics related to production and operations management in a systematic way. It covers not only the essentials of planning, designing, managing and controlling of manufacturing operations, but also a number of relevant topics such as total preventive maintenance, environmental issues in production system, advanced production system, total productivity management and work system design, which are not covered in many books. The book is a useful resource for undergraduate and postgraduate students of MBA programmes, as well as B.Tech and M.Tech programmes of production and industrial engineering. Key Features • Theories and concepts based on day-to-day practical applications in the industry • Large number of solved examples to explain the theoretical concepts • Case study at the end of each chapter to illustrate the theory • Brings out the link between linear programming and its applications Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime, dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. Macroeconomic Theory is the most up-to-date graduate-level macroeconomics textbook available today. This book truly offers something new by emphasizing the general equilibrium character of macroeconomics to explain effects across the whole economy, not just part. It is also the perfect resource for economists who need to brush up on the latest developments. Michael Wickens lays out the core ideas of modern macroeconomics and its links with finance. He presents the simplest general equilibrium macroeconomic model for a closed economy, and then gradually develops a comprehensive model of the open economy. Every important topic is covered, including growth, business cycles, fiscal policy, taxation and debt finance, current account sustainability, exchange-rate determination, and an up-to-date account of monetary policy through inflation targeting. Wickens addresses the interrelationships between macroeconomics and modern finance and shows how they affect stock, bond, and foreign-exchange markets. While the mathematics needed for this book is rigorous, the author describes fundamental concepts in a way that helps make the book self-contained and easy to use. Accessible, comprehensive, and wide-ranging, Macroeconomic Theory will become the standard text for students and is ideal for economists, particularly those in government, central and commercial banking, and financial investment. The most up-to-date macroeconomics textbook available today Web-based exercises with answers (June 2008) Emphasis on general equilibrium macroeconomics addresses the whole economy Latest advances in macroeconomics covered fully and completely Gives up-to-date account of monetary policy Covers modern finance Extensive mathematical appendix for at-a-glance easy reference Network models are critical tools in business, management, science and industry. "Network Models and Optimization" presents an insightful, comprehensive, and up-to-date treatment of multiple objective genetic algorithms to network optimization problems in many disciplines, such as engineering, computer science, operations research, transportation, telecommunication, and manufacturing. The book extensively covers algorithms and applications, including shortest path problems, minimum cost flow problems, maximum flow problems, minimum spanning tree problems, traveling salesman and postman problems, location-allocation problems, project scheduling problems, multistage-based scheduling problems, logistics network problems, communication network problem, and network models in assembly line balancing problems, and airline fleet assignment problems. The book can be used both as a student textbook and as a professional reference for practitioners who use network optimization methods to model and solve problems. How to Buy & Sell (Just About) Everything The Ultimate Buyer's Guide for Daily Life Don't make another purchase before you buy this ultimate buyer's guide. With more than 550 how-to solutions, these pages are packed with savvy strategies for choosing and locating (and unloading and liquidating) both everyday items and once-in-a-lifetime splurges, with special emphasis on how to find bargains and broker great deals. The clear and friendly information in How To Buy & Sell (Just About) Everything makes any buying or selling decision easy, from selecting baby gear to saving for college, from hawking lemonade to selling your company. Browse these pages to discover how to: Buy a House • Sell a Car • Buy Happiness • Sell Your Old Computer • Buy Mutual Funds • Hire a Butler • Choose a Diamond Ring • Purchase a Tent • Get Breast Implants • Negotiate a Better Credit Card Rate • Buy a Hot Dog Stand • Sell Your Baseball Collection • Outfit a Nursery • Book a Cheap Safari...and much, much more Written and designed in the same easy-to-use format as its predecessors, How To Do (Just About) Everything and How to Fix (Just About) Everything, this invaluable collection includes concise instructions, helpful tips and comparison charts -- everything you need to understand product features, prevent problems and guarantee smart purchasing decisions. This is the only book you need to make the most of your money. Though based on an economic transition, retailer-consumer relationship is also influenced by non-economic factors and is a context of social interaction. With the emergence of modern merchandising techniques and a rise in large retail companies, consumers have become increasingly vigilant of practice within the retail industry. Handbook of Research on Retailer-Consumer Relationship Development offers a complete and updated overview of various perspectives relating to customer relationship management within the retail industry and stimulates the search for greater integration of these views in further research. Offering different angles to analyze the exchange between the retailer and the consumer, this handbook is a valuable tool for professionals and scholars seeking to upgrade their knowledge, as well as for upper-level students. Engineer naturally lean web pages and leverage the latest web platform features to dramatically boost page speed About This Book The first book for web developers that shows how to put AMP to work Improve your website's mobile experience and get more traffic Practical methods to achieve a step change in performance quickly and easily Who This Book Is For This book is for experienced web developers who are aware of the impact of slow-loading web pages on conversion rates and user engagement, and who are seeking to serve content to their end users in a rich and enticing way using the Accelerated Mobile Pages framework. You should be familiar with HTML5, CSS3, JavaScript, and JSON. What You Will Learn Build, validate, and deploy AMP pages Create interactive user notifications, navigation menus, accordions, contact pages with forms and maps Monetize your traffic with a variety of ad styles and providers Analyze your traffic by integrating analytics providers and tracking user-behavior along several dimensions Embed social media with amp-youtube, amp-instagram, amp-twitter, and amp-facebook Build e-commerce functionality including product pages and shopping carts Deliver rich media experiences using AMP custom elements Use advanced deployment techniques to extend functionality Install ServiceWorkers and build Progressive Web Apps for offline use In Detail Google introduced the Accelerated Mobile Pages (AMP) project to give mobile users lightning-fast response times when accessing web pages on mobile devices. AMP delivers great user experiences by providing a framework for optimizing web pages that otherwise would take much longer to load on a mobile platform. This book shows how to solve page performance issues using the mobile web technologies available today. You will learn how to build instant-loading web pages, and have them featured more prominently on Google searches. If you want your website to succeed on mobile, if you care about SEO, and if you want to stay competitive, then this book is for you! You will go on a mobile web development journey that demonstrates with concrete examples how to build lightning-fast pages that will keep your visitors on-site and happy. This journey begins by showing how to build a simple blog article-style web page using AMP. As new concepts are introduced this page is gradually refined until you will have the skills and confidence to build a variety of rich and interactive mobile web pages. These will include e-commerce product pages, interactive forms and menus, maps and commenting systems, and even Progressive Web Apps. Style and approach Get step-by-step instructions to build web pages of different types, gain expert tricks to brand your pages without bloating them, and see methods to embed advertising. Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime, dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime,

dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. Boys' Life is the official youth magazine for the Boy Scouts of America. Published since 1911, it contains a proven mix of news, nature, sports, history, fiction, science, comics, and Scouting. Brands – corporate, products, service – today are collectively defined by their customers, deriving from personal experiences and word of mouth. This book acts as a forum for examining current and future trends in corporate branding, identity, image and reputation. Recognising the complexity and plurality at the heart of the corporate branding discipline, this book fills a gap in the literature by posing a number of original research questions on the intrinsic nature of corporate branding ideas from corporate (external) and organisation (internal) identity perspectives as they relate to brand management, corporate reputation, marketing communications, social media, smart technology, experiential and sensory marketing. It incorporates current thinking and developments by both multidisciplinary academics and practitioners, combining a comprehensive theoretical foundation with practical insights. The text will serve as an important resource for the marketing, identity and brand practitioners requiring more than anecdotal evidence on the structure and operation of stakeholders communication in different geographical areas. It determines current practices and researches in diverse areas, regions and commercial and non-commercial sectors across the world. The book provides scholars, researchers and postgraduate students in business and marketing with a comprehensive treatment of the nature of relationships between companies, brands and stakeholders in different areas and regions of the world. In any production environment, discrete event simulation is a powerful tool for the analysis, planning, and operating of a manufacturing facility. Operations managers can use simulation to improve their production systems by eliminating bottlenecks, reducing cycle time and cost, and increasing capacity utilization. Offering a hands-on tutorial on h Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime, dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. Directory for the Lions District 317C, was released by District Governor PMJF Lion A R Ujjanappa, for the Centenary year 2017-18. It contains Lionistic information on all the Clubs, Zones, Regions and the Lion Leaders along with LCI information. This Digital Edition is a replica of the print edition, to enable portability of the information. This essential text contains contributions from a wide range of fields and provides role models for feminist scientists. Including chapters from scientists and feminist scholars, the book presents a wide range of feminist science studies scholarship-from autobiographical narratives and experimental and theoretical projects, to teaching tools and courses and community-based projects. Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime, dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. Electronic business plays a central role in the economy, facilitating the exchange of information, goods, services, and payments. It propels productivity and competitiveness and is accessible to all enterprises, and as such, represents an opportunity also for SME competitiveness. E-Business Issues, Challenges and Opportunities for SMEs: Driving Competitiveness discusses the main issues, challenges, opportunities, and solutions related to electronic business adoption, with a special focus on SMEs. Addressing technological, organizational, and legal perspectives in a very comprehensive way, this text aims to disseminate current developments, case studies, new integrated approaches, and practical solutions and applications for SMEs. Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime, dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. Indianapolis Monthly is the Circle City's essential chronicle and guide, an indispensable authority on what's new and what's news. Through coverage of politics, crime, dining, style, business, sports, and arts and entertainment, each issue offers compelling narrative stories and lively, urbane coverage of Indy's cultural landscape. Written in a clear and concise manner this book provides a theoretical and application oriented analysis of deterministic scheduling problems arising in computer and manufacturing environments. Various scheduling problems are discussed where different problem parameters such as task processing times, urgency weights, arrival times, deadlines, precedence constraints, and processor speed factor are involved. Polynomial and exponential time optimization algorithms as well as approximation and heuristic approaches are presented and discussed. Moreover, resource-constrained, imprecise computation, flexible flow shop and dynamic job shop scheduling, as well as flexible manufacturing systems, are considered. An excellent analysis based on real-world applications with plenty of examples. Many approaches have been proposed to enhance software productivity and reliability. These approaches typically fall into three categories: the engineering approach, the formal approach, and the knowledge-based approach. The optimal gain in software productivity cannot be obtained if one relies on only one of these approaches. Thus, the integration of different approaches has also become a major area of research. No approach can be said to be perfect if it fails to satisfy the following two criteria. Firstly, a good approach should support the full life cycle of software development. Secondly, a good approach should support the development of large-scale software for real use in many application domains. Such an approach can be referred to as a five-in-one approach. The authors of this book have, for the past eight years, conducted research in knowledge-based software engineering, of which the final goal is to develop a paradigm for software engineering which not only integrates the three approaches mentioned above, but also fulfils the two criteria on which the five-in-one approach is based. Domain Modeling- Based Software Engineering: A Formal Approach explores the results of this research. Domain Modeling-Based Software Engineering: A Formal Approach will be useful to researchers of knowledge-based software engineering, students and instructors of computer science, and software engineers who are working on large-scale projects of software development and want to use knowledge-based development methods in their work. This volume presents advanced techniques to modeling markets, with a wide spectrum of topics, including advanced individual demand models, time series analysis, state space models, spatial models, structural models, mediation, models that specify competition and diffusion models. It is intended as a follow-on and companion to Modeling Markets (2015), in which the authors presented the basics of modeling markets along the classical steps of the model building process: specification, data collection, estimation, validation and implementation. This volume builds on the concepts presented in Modeling Markets with an emphasis on advanced methods that are used to specify, estimate and validate marketing models, including structural equation models, partial least squares, mixture models, and hidden Markov models, as well as generalized methods of moments, Bayesian analysis, non/semi-parametric estimation and endogeneity issues. Specific attention is given to big data. The market environment is changing rapidly and constantly. Models that provide information about the sensitivity of market behavior to marketing activities such as advertising, pricing, promotions and distribution are now routinely used by managers for the identification of changes in marketing programs that can improve brand performance. In today's environment of information overload, the challenge is to make sense of the data that is being provided globally, in real time, from thousands of sources. Although marketing models are now widely accepted, the quality of the marketing decisions is critically dependent upon the quality of the models on which those decisions are based. This volume provides an authoritative and comprehensive review, with each chapter including: · an introduction to the method/methodology · a numerical example/application in marketing · references to other marketing applications · suggestions about software. Featuring contributions from top authors in the field, this volume will explore current and future aspects of modeling markets, providing relevant and timely research and techniques to scientists, researchers, students, academics and practitioners in marketing, management and economics.
