Water Measurement Manual 3rd Ed Nov 11 2021 Provides guidance for water users and districts in selecting, managing, inspecting, and maintaining their water measurement devices. Describes the standard methods and devices used to measure irrigation water. Acquaints irrigation system operators with other established but less common methods and with new or special techniques.

Operation and Maintenance Manual - 8-counter Low Background Nuclear Radiation Measurement System Aug 08 2021 The 8-Counter Low-Background Nuclear Radiation Measurement System is a device designed to measure minute quantities of radioactivity. Each counter is independent of the other counters, both electronically and mechanically, so that individual sample changes may be made in any counter without disturbing operation of the other counters. Thus, in addition to providing a means of measuring levels of radioactivity that are not easily measured by conventional detection devices, the system provides for efficient use of the equipment by allowing eight samples to be counted at one time for the relatively long counting periods required to obtain a statistically sufficient number of counts.

Metric Manual Sep 09 2021 "The purpose of the metric manual is to give...the background necessary to understand the full implications of conversion from our customary system of measure to the international metric system of measure. Consideration is given to measurement systems in general, the customary system of measure currently in use in the United States, the international metric system (SI), the advantages and disadvantages of conversion and the problems associated with conversion"--Pref. Published 1975.

Measuring Metabolic Rates Sep 21 2022 This is the only authoritative textbook on metabolic measurement of animals, ranging in mass from fruit flies to whales. It integrates a rigorous theoretical background with detailed practical guidelines for making actual measurements in the field and laboratory.

Instruction Manual for ANL Passive Acoustic Flow Measurement System Mar 15 2022 The ANL Passive Acoustic Flow Measurement System is a signal processor designed to measure the flow rate of particles suspended in a gas. The intended application is the measurement of char flow at the BI-GAS Pilot Plant, Homer City, PA. An undetected flow stoppage can very quickly cause a dangerous temperature excursion in the gasifier. At the request of BI-GAS, Argonne National Laboratory (ANL) has developed and installed acoustic monitors which give rapid indications of blockages or other flow perturbations in the char lines. These monitors use a high temperature microphone for measuring the acoustic attenuation caused by the presence of char in the lines. This manual describes the components and gives instructions for installation and operation of the system. Figure 1 shows the components of the flow measurement system. Detailed discussion of the principle of operation and design of the flow monitor may be found in Technical Memorandum An Acoustic Char Flow Monitor for the BI-GAS Pilot Plant, ANL-FE-49622-TM08, July 1979.

Videogrammetric Model Deformation Measurement System User's Manual May 17 2022 The purpose of this manual is to provide the user of the NASA VMD system, running the MDef software, Version 1.10, all information required to operate the system. The NASA Videogrammetric Model Deformation system consists of an automated videogrammetric technique used to measure the change in wing twist and bending under aerodynamic load in a wind tunnel. The basic instrumentation consists of a single CCD video camera and a frame grabber interfaced to a computer. The technique is based upon a single view photogrammetric determination of two-dimensional coordinates of wing targets with fixed (and known) third dimensional coordinate, namely the span-wise location. The major consideration in the development of the measurement system was that productivity must not be appreciably reduced. Dismond, Harriett R. Towed Body Motion Measurement System Instruction Manual Feb 20 2020 The purpose of this manual is to provide a capability to measure a number of motions of a cable towed transducer group and the tow ship. Specifications, functional and physical descriptions are given, as well as details of the installation procedure and check-out. Operating instructions are provided along with a troubleshooting and operator's maintenance section. System components are described in Appendix A, parts lists are supplied in Appendix B, and equipment photographs are shown in Appendix C. The system was designed to obtain motional measurements on full-size equipment at sea under actual towing conditions, and to record this data continuously on magnetic tape.

The Organizational Measurement Manual Jul 07 2021 Annotation Wealleans, a chartered engineer and practicing business leader, details steps for creating performance measurements at the working level. He addresses procedures for identifying, designing, monitoring, and using measurements and how these might relate to other objectives within an organization, and explores the use of general performance measurement as a management tool for the areas of control, customer satisfaction, and business improvement. Unlike many other guides, a distinction is made between general strategic measurement, and monitoring of process-level measurements that directly relate to the performance of an individual work team. The author is head of international operations for a maritime technology company. Annotation c. Book News, Inc., Portland, OR (booknews.com).
