designed primarily for interactive operation on the IBM 360/65 computer system, in conjunction with a PDP-11 and DEC-GT-40 scope and a Houston bed type plotter. Interfacing with a Tektronix storage tube Model 4010, 4012, or 4014, the Houston plot bed and the IBM 360/65 is also available. Options for batch processing with and without Houston plots has been provided. With minor modifications the program can also be interfaced with a CDC or UNIVAC 1110 in lieu of the IBM 360/65. Program modifications required for CDC 6600 compatibility are covered in Section 9 of this report. Well over 700 total pages ... Surgery encompasses all elements in the scientific care of surgical patients. The operation is the focal point for these patients. It is imperative that the patient comes to the operating room (OR) optimally prepared physically and emotionally before performance of an operative procedure. The persons concerned with and/or contributing to surgical patient care are many. The practical nurse shares a special experience with the patient at this time of great stress and need in his life. Their relationship encompasses feelings, attitudes, and behavior approaches. The nurse's first objective is to promote and establish a meaningful, therapeutic relationship, enabling the provision of individualized care. He, then, is to provide the perioperative nursing care that is required for the safest possible care of the patient and production of a favorable surgical outcome. Any patient who is scheduled to have surgery poses special challenges to personnel entrusted with his care. Every procedure done by (OR) operating room personnel for the patient's operation--from the preoperative skin prep to final closure of the incision--requires thorough mastery of many precision techniques and uncompromising attention to detail in order to safeguard the patient. While in the OR, the patient is cared for by a highly trained team that must function as a unit if the patient's best interest is to be served. You, the OR specialist, are a member of this team. While each patient brings new challenges to the surgical team, there are certain problems and techniques associated with particular kinds of special surgery that can be anticipated. By preparing for these peculiarities of the various specialties, the team can circumvent a great many problems that would otherwise arise. In this subcourse, a large number of operations in various specialties are described, along with special dangers that may attend these particular procedures. The more familiar you become with these, the more effectively you will be able to do your part as a member of the operating room team. Also, in this course, you will study wound healing and wound care, contaminated wounds, and burns. Information you read in this course will aid you in maintaining and improving the health of soldiers. Over 1,300 total pages ...

INTRODUCTION Food is surrounded by dangerous agents and conditions that can make people ill. As multiple handling and modern processing methods lengthen the journey from farm to table, the opportunities for food to become contaminated and/or spoiled increase. The veterinary food inspection specialist helps protect the food utilized by the military by insuring sanitary control of food establishments handling food for military use. This course discusses these sanitary controls. Foods undergo deterioration of varying degrees in their sensory characteristics, nutritional value, safety, and aesthetic appeal. Most foods, from the time they are harvested, slaughtered, or manufactured, undergo progressive deterioration that, depending upon the food, may be very slow or so rapid as to render the food virtually useless in a matter of hours. This presents a problem to the Department of Defense because food supplies have to be purchased well in advance of anticipated usage. Large quantities of food are lost each year due to deterioration. The problem is due to the perishable nature of food, as well as to the rather lengthy Defense subsistence supply chain. Due to these factors, veterinary food inspection specialists are tasked with recognizing deterioration in subsistence and making recommendations to preclude public health problems and financial losses to the Government. How do bacteria reproduce? Does the bacterial cell contain a nucleus? What are the shapes of bacteria? If you cannot answer these questions now, you should be able to when you have completed this course, and you should also know the answers to many other questions. For those of you who already know this material, let it serve as a review. Why are we interested in bacteria? Because some bacteria are capable of waging war on the human race and some bacteria are capable of benefiting our lives. We need to know the difference. Bacteria are microorganisms and microorganisms are the smallest of all organisms; for example, 2,000 of them can be lined up across the head of a common pin. In this subcourse, we will be concerned with those tiny organisms that are unfriendly, because they are responsible for a large percentage of spoilage in foods. We believe it is important to know about those microorganisms that cause food deterioration so that we can eliminate deterioration in foods before it occurs. More than 30,000 listings are presented in this edition with increased coverage from major steel producing countries such as China, India, and Japan.
