Perspectives in Group Psychotherapy (RLE: Group Therapy) Oct 20 2022 This book, originally published in 1972, aimed to provide a theoretical framework for group therapists to guide them through the mass of variables which beset them. Its scope therefore is extremely broad, for it also touches on philosophy, psychology, sociology, communication and general systems theory. In the last chapter certain conclusions are drawn concerning the relationship between group and psycho-dynamics. The book will be of interest to those who have already had some experience of small, medium or large groups, and who want to think about their work in more general terms: it was not at the time widely realised how radically different and how potentially powerful are the implications of group procedures, not only for therapy but in such fields as education, industry and politics. Freud recognised this when he pointed out the dilemma of having to procure for the group precisely those features which were characteristic of the individual, and which are extinguished in him by the formation of the group. Whilst the problem for the individual is the intrusion of unconscious factors, for the group it is the group's equivalent of consciousness, namely communication and organization, which is in a quandary. The group model differs crucially from the psychological, but they may relate in the sense that, as Freud indicated, neurosis represents a recapitulation within the individual of mankind's group history. The unconscious mind, then, is a group phenomenon. In other words, group theory turns psychoanalysis upside down and begins at the point where Freud left off, relating neurosis to its social sources. In the light of the group approach, therefore, neurosis

and certain of the psychoses can be viewed as localized deposits of unresolved group experiences within the individual, whether they be past, current or an expectation of the future; a feature which makes traumatic neuroses more understandable since they cannot be explained in terms of infantile neurosis. The author suggested the possibility of a new development in group techniques, namely that of large group therapy freed of community ties or training considerations, in which attitudes and ideologies make themselves evident, not as cloudy idealistic non sequiturs but as crucial and clearly definable climates which either impede or promote communication and the flow of information.

The Theoretical Framework in Phenomenological Research Mar 13 2022 The Theoretical Framework in Phenomenological Research: Development and Application is an introduction to phenomenology in which the authors overview its origin, main ideas and core concepts. They show the application and relevancy of phenomenological tenets in practical qualitative research, as well as demonstrate how aligning theory and method enhances research credibility. In this detailed but digestible explanation of phenomenological theories, the authors explore the ideas of the main founders pertaining to the meaning of perceived reality and the meaning of being, and how these founders articulated their methodologies. In doing so, The Theoretical Framework in Phenomenological Research fills the well-documented gap between theory and practice within phenomenology by providing a much-needed bridge between the foundational literature and applied research on the subject, focusing equally on theory and practice. The book includes practical demonstrations on how to create theoretical/conceptual frameworks in applied phenomenological research. It also features detailed, step-by-step illustrations and examples regarding how researchers can develop frameworks and use their concepts to inform the development of themes at the data analysis stage. A reliable guide underpinned by foundational phenomenology literature, The Theoretical Framework in Phenomenological Research is an essential text for researchers, instructors, practitioners and students looking to design and conduct phenomenological studies in a manner that ensures credible outcomes.

The Institutionalization of Divestitures May 15 2022 Miriam Flickinger investigates the stock market reaction to divestiture announcements from an institutionally-based perspective. Using meta-analytic procedures, the author

extends the present financially dominated understanding of divestiture performance implications. She shows that divestitures are socially embedded when the value of a firm's divestiture depends on the prevailing institutional logics within the business society.

Textual Metonymy Sep 19 2022 Textual Metonymy employs a theoretical framework combining rhetoric, figurative theory and textlinguistics. In the process, a very full historical account of treatments of metonymy from classical traditions up to the present time is given and critiqued. The author proposes a semiotic approach to the treatment of metonymy, on the basis of which a textual model of metonymy as a process of representation is developed to account for text cohesion and text coherence.

This research paper explains this concept by exploring the theoretical foundations of the term as well as its application to the marketing practice. This work has two main objectives. The first is to provide solid theoretical information about the idea of brand tribalism including characteristics, structures and types of brand tribes. The second objective is to present how the concept of brand tribalism can be applied to the marketing management and how it affects customers. Furthermore, marketing activities of two companies present on the market will be researched in connection with the concept of brand tribalism.

Theory Building in Applied Disciplines Jan 19 2020 Theory matters in applied disciplines—fields that apply scholarly research to professional practice, such as management, social work, health care, human resource development, education, and many others. Because these disciplines deal with human beings in the real world, a flawed theory can result in actual harm to people and institutions. When faced with a professional problem, practitioners resort to the latest fad or simply throw everything and anything at it because of the lack of sound theory. Scholars deal with problems by slicing them into small segments to study them but fail to address the practical implications. What's needed is a way to unite research and practice to create robust theory. This is exactly what Richard Swanson and Thomas Chermack offer here: a complete, five-step method for developing sound, field-tested theory in applied disciplines. Unlike many existing methods, which cover only the initial conceptualization of a theory, the authors offer a complete approach, from conceptualizing a theory to creating relevant assessment criteria, establishing a research agenda to test the theory's validity, applying the theoretical concepts in the real world, and using that experience to further refine and improve the theory. The method is not restricted to any single discipline, nor is it beholden to any research ideology. Swanson and Chermack provide a set of tools for each phase of the process, making this book accessible and applicable to a wide audience. And in addition to examples in each chapter, they offer two extended case examples of complete theory building. With flawed theories impeding the development of many applied disciplines, this book is desperately needed.

Theoretical foundation for large-scale computations for nonlinear material behavior Jun 04 2021 This book

contains the proceedings of a workshop on the Theoretical Foundation for Large-Scale Computations of Nonlinear Material Behavior, held under the auspices of the National Science Foundation (NSF) and the Defense Advance Research Projects Agency (DARPA), at Northwestern University, October 24-26, 1983. The main objective of this workshop was to provide a forum for the exchange of information and views on major issues relating to the fundamentals of characterizing the inelastic constitutive material behavior. Comments on the Aims of the Workshop, by Drs. William Snowden and Thomas Bache, pp. 1-5, outline reasons for holding this workshop, and provide further background. The format of the workshop was designed to optimize the interaction between researchers whose primary interest is material characterization and numerical analysts whose primary interest is the development and practical use of large computer codes. The program of the workshop and a list of the workshop participants are found at the end of these proceedings.

Green Controlling and Finance. Theoretical Framework Feb 12 2022 Modern management for the fulfillment of

sustainable development goals requires support provided by controlling, especially 'green controlling', whose core focus is on environmental and social issues. This book presents controlling within the concept of sustainable development as an element contributing to the increase of enterprise value. The authors of this monograph have explored topics in connection with environmental and social determinants, at the same time presenting their financial consequences for company business. As a result, the publication demonstrates, in the theoretical dimension, that activities undertaken in an organized and coordinated fashion with a view of sustainable development goals may and should be regarded in connection with finance.

The Theoretical Background and Practical Implications of Argumentation in Ireland Feb 24 2023 While the association between the words “Ireland” and “argumentation” may not necessarily look particularly straightforward, this book shows that they are, in fact, closely connected. Specifically, the volume offers a linguistic perspective to suggest that the study of reasoned argument is likely to have a wide range of potential applications in the context of Irish public discourse. Taking two of the classic, favourite subjects of inquiry of contemporary argumentation theory, it addresses the issue of the construction of argumentation in the judiciary and in the politics of the Irish Republic. On the basis of three illustrative case studies, the book explores which methods can be used to identify distinctive aspects of the language at work in public settings where argumentation is the expected form of interaction, and the ways in which such methods can lead to an integrated approach to the study of argumentative language in Irish public discourse, in the interest of field scholars and practitioners alike.

Theoretical Foundation Engineering Nov 16 2019 *Theoretical Foundation Engineering* provides up-to-date, state-of-the-art reviews of the existing literature on lateral earth pressure, sheet pile walls, ultimate bearing capacity of shallow foundations, holding capacity of plate and helical anchors in sand and clay, and slope stability analysis. The discussion of the ultimate bearing capacity of shallow foundations is the most comprehensive presentation on the subject to be found anywhere, and the review of earth anchors is unique to this book. In addition, each chapter includes several topics which have never appeared in any other book. The treatment is primarily theoretical and does not in any way compete with existing foundation design books. This is the only textbook of its kind. Not only will it be welcomed by teachers and first-year graduate students of geotechnical engineering, but it will be a useful reference for graduate students and consultants in the the field, as well as being a valuable addition to any civil engineering library.

The Morocco Policy Analysis Model: Theoretical Framework and Policy Scenarios Nov 28 2020 The Morocco Policy Analysis model (MOPAM) was created in the Bank Al-Maghrib to simulate the impact of external developments, domestic macroeconomic policies, and structural reforms on key macroeconomic aggregates. We describe its structure and demonstrate its operation on two medium-term scenarios: (1) fiscal consolidation to stabilize the debt-to-GDP ratio and (2) the effects of the COVID-19 shock, including the endogenous fiscal and monetary policy response.

Creating Theoretical Research Frameworks using Multiple Methods Jan 31 2021 By now, it is commonly accepted that investments in information and communication technologies (ICTs) can facilitate macroeconomic growth in developed countries. Research standards in ICT for development (ICT4D) are high, and it is a basic expectation that a theoretically sound conceptual investigation should yield actionable results. An additional expectation is that an on-the-ground study conducted in each setting should add to the common body of knowledge based on theory. In other words, one is expected to make a connection between the world of concepts and the world of reality. Middle-range theories and frameworks could help connect the case studies with grand theories, by helping to create a theoretically sound and practically applicable research architecture of ICT4D. This book demonstrates how creative use of various data analysis methods (e.g., data mining [DM], data envelopment analysis [DEA], and structural equation modeling [SEM]) and conceptual frameworks (e.g., neoclassical growth accounting, chaos and complexity theories) may be utilized for inductive and deductive purposes to develop and to test, in step-by-step fashion, theoretically sound frameworks for a large subset of ICT4D research questions. Specifically, this book showcases the utilization of DM, DEA, and SEM for the following purposes: Identification of the relevant context-specific constructs (inductive application) Identification of the relationships between the constructs (inductive application) Development of a framework incorporating the constructs and relationships discovered (inductive application) Testing of the constructed framework (deductive application) The book takes a multi-theoretical perspective to economic development research. It starts with an overview of ICT4D. Next it covers such frameworks and theories as neoclassical growth accounting and the theory of complementarity, complex systems and chaos theories, and the product life cycle (PLC) theory. There are also nontechnical overviews of the DM and data analytic methods that can be used in this research. Also

presented is evidence that human capital and investment capital are complementary and are reliable sources of economic growth. The book concludes with methodological frameworks to guide investment decisions and the formulation of strategic policy.

The Dark Side of the Universe Dec 10 2021 The search for dark matter is one of the most relevant topics in astroparticle physics today. It involves many different experimental techniques that should collectively contribute significantly to the identification of the nature and characteristics of the dark matter constituents, offering at the same time much room for new technological developments. The theoretical framework is also essential, both for properly interpreting the different results and for suggesting the most interesting possible candidates and search strategies. This book compares the methods, the developments and the results. Contents: Astrophysics Baryonic DM Searches Experiments Neutrinos Axions Theory Search at Accelerators Low Radioactivity Techniques WIMPS Direct Searches WIMPS Indirect Searches Readership: Astrophysicists and high energy physicists. keywords: *Forensic Anthropology* Oct 28 2020 Provides comprehensive coverage of everything that students and practitioners need to know about working in the field of forensic anthropology Forensic anthropology has been plagued by questions of scientific validity and rigor despite its acceptance as a section in the American Academy of Forensic Sciences nearly half a century ago. Critics have viewed it as a laboratory-based applied subfield of biological anthropology, and characterised it as emphasising methodology over theory. This book shows that these views are not only antiquated, but inadequate and inaccurate. *Forensic Anthropology: Theoretical Framework and Scientific Basis* introduces readers to all of the theoretical and scientific foundations of forensic anthropology — beginning with how it was influenced by the early theoretical approaches of Tyler, Morgan, Spencer and Darwin. It instructs on how modern forensic science relies on an interdisciplinary approach — with research being conducted in the fields of archaeology, physics, geology and other disciplines. This modern approach to theory in forensic anthropology is presented through the introduction and discussion of Foundational, Interpretive and Methodological theories. Sections cover: Bias and Objectivity in Forensic Anthropology Theory and Practice; The Theory and Science Behind Biological Profile and Personal Identification; Scientific Foundation for Interpretations of Antemortem, Perimortem, and Postmortem Processes; and Interdisciplinary Influences, Legal Ramifications and Future Directions. Illustrates important aspects of the theory building process and

reflects methods for strengthening the scientific framework of forensic anthropology as a discipline Inspired by the “Application of Theory to Forensic Anthropology” symposium presented at the 67th annual meeting of the American Academy of Forensic Sciences Chapters written by experts in the field who were presenters at the symposium Forensic Anthropology: Theoretical Framework and Scientific Basis is ideal for university courses in anthropological science, forensic science, criminal science and forensic archaeology.

Theoretical Frameworks in Qualitative Research Jan 23 2023 The Second Edition of Theoretical Frameworks in Qualitative Research, by Vincent A. Anfara, Jr. and Norma T. Mertz, brings together some of today’s leading qualitative researchers to discuss the frameworks behind their published qualitative studies. They share how they found and chose a theoretical framework, from what discipline the framework was drawn, what the framework posits, and how it influenced their study. Both novice and experienced qualitative researchers are able to learn first-hand from various contributors as they reflect on the process and decisions involved in completing their study. The book also provides background for beginning researchers about the nature of theoretical frameworks and their importance in qualitative research; about differences in perspective about the role of theoretical frameworks; and about how to find and use a theoretical framework.
