[Teaching and Learning Computer Programming](#) Jul 18 2022 The influx of computer technology into classrooms during the past decade raises the questions -- how can we teach children to use computers productively and what effect will learning to program computers have on them? During this same period, researchers have investigated novice learning of computer programming. Teaching and Learning Computer Programming unites papers and perspectives by respected researchers of teaching and learning computer science while it summarizes and integrates major theoretical and empirical contributions. It gives a current and concise account of how instructional techniques affect student learning and how learning of programming affects students' cognitive skills. This collection is an ideal supplementary text for students and a valuable reference for professionals and researchers of education, technology and psychology, computer science, communication, developmental psychology, and industrial organization.

[The Impact of Computer-based Assignments on Student Motivation to Complete Homework Assignments for Sixth-grade Students](#) Feb 25 2023 The purpose of this qualitative study was to examine the engagement of 11 middle school-aged students from a southeast Michigan public school, who were given laptop computers with twenty-four-hour-a-day Internet access in order to complete homework assignments. Specifically, this study examined the perceptions of sixth-grade students regarding the impact of computer-based assignments on homework activity engagement and completion. These students brought home computers provided by their school district to complete the assignments. The researcher used Strong, Silver, and Robinson's (1995) theoretical model, SCOR-E, in order to shape the protocol for this study. There were four primary themes that emerged from the student responses: Organization, Learning as Fun, Voice, and Person-to-Person Connection. From these four themes, 14 sub-themes were also revealed. These included Improved Time Management, Increased Organization, Increased Ease, Appreciation of Increased Accessibility to Information, Appreciation of Deeper/Better Understanding of Content and Assignments, Appreciation of Freedom to Explore for More Information, Pure Enjoyment, Confidence in Sharing during Discussions, Frequency in Discussions, Increased Collaboration, Enhanced Relationship with Teacher, Increased Assistance from Teacher, Enhanced Current Student Relationships, Increased Number of New Friendships. Overall, all 11 participants responded favorably to the use of laptops for the purpose of computer-based homework assignments. Further research exploring middle-school-aged students and technology is needed. The challenge of motivation, technology and social media in schools continues to exist. This analysis proves to be essential to understanding middle school-aged students and computer-based homework assignments.

Educational Research and Innovation Measuring Innovation in Education 2019 What Has Changed in the Classroom? Jan 12 2022 Measuring innovation in education and understanding how it works is essential to improve the quality of the education sector. Monitoring systematically how pedagogical practices evolve would considerably increase the international education knowledge base. We need to examine whether, and how ...

Strategies and Technologies for Developing Online Computer Labs for Technology-Based Courses Feb 13 2022 For technology-based online courses, computer labs are necessary to support hands-on practice for IT products. The implementation of an online computer teaching lab is a challenging task.

Strategies & Technologies for Developing Online Computer Labs for Technology-Based Courses discusses design strategies, implementation difficulties, and the effectiveness of online labs. This book provides scholars, researchers, and practitioners support for lab-based e-learning, gives guidance on the selection of technologies for various projects, and illustrates Web-based teaching with case studies.

Teaching Computers in Pre-K Through 8th Grade Nov 22 2022 Have you ever wondered what it might be like to teach a subject to every grade in a school? Do you think you could teach the same subject to every student in school? This book describes my experiences teaching computer to all grades, pre-K through 8th grade, in a private school. This book contains: My experiences, both good and bad, and how I corrected the bad experiences. Assessment tests on all subjects, such as history, geography, and science. These tests were used by me, and can be used by you, to give the student experience with the computer and as practice taking the exams. Appendix of web sites that teachers and students can use to enhance their knowledge in computers and other topics. A computer room design setup. This setup will enhance the learning experience for the students and will make the instructor's job easier. A set of assignments designed for each class. This book is designed for the teacher and educator and will give you laughs as you see how I learned through trial and error. It will also help in teaching computers in grade school.

Introduction to Computers for Healthcare Professionals Oct 09 2021 The only computer and information literacy book designed specifically for students in health care disciplines, Introduction to Computers for Healthcare Professionals, Fourth Edition explains hardware, popular software programs, operating systems, research applications, and computer-assisted communication, including sections on information access, evaluation and use, and the Internet. Built on the Computers in Small Bytes Foundation, the revised Fourth Edition continues to present this information with great detail and clarity, featuring the most recent MS Office programs, and focusing on the security of systems and data.

Intelligent Computing Dec 11 2021 This book presents the proceedings of the Computing Conference 2019, providing a comprehensive collection of chapters focusing on core areas of computing and their real-world applications. Computing is an extremely broad discipline, encompassing a range of specialized fields, each focusing on particular areas of technology and types of application, and the conference offered pioneering researchers, scientists, industrial engineers, and students from around the globe a platform to share new ideas and development experiences. Providing state-of-the-art intelligent methods and techniques for solving real- world problems, the book inspires further research and technological advances in this important area.

The Engineer's Career Guide Jun 17 2022 This is the most complete career resource guide book for engineers dealing with the non-technical side of engineering. It provides career advice for engineers at all stages of their careers, whether newly graduated, mid-career, or soon-to-be-retired. This book provides many real world, practical, proven, common sense career tips supported by actual work and experiences/examples. Tips deal with problems the engineer may encounter with supervisors, co-workers and others in the corporation. The book provides step-by-step guidance on how to deal with career problems and come out ahead.

The Condition of Education Apr 15 2022

Metacognitive Self-regulated Learning Processes in Computer and Print Reading Assignments Among Elementary Students in Grades 2-5 Dec 23 2022 Self-regulated learning (SRL) and higher-order thinking (metacognitive processes) are important in education because they contribute to effective learning and improved academic performance. These processes may be facilitated by the implementation of computer technology in the classroom. This research project examined the use of computer technology among elementary school students and possible effects on self-regulated learning and metacognitive processes, including the ability to plan, monitor, evaluate one's own work, and apply specific learning strategies. Two main research questions were investigated: (1) Do elementary school students demonstrate SRL metacognitive processes when they use computers and paper-pencil for reading-related tasks, and what are the key SRL metacognitive processes? (2) Are there differences in SRL metacognitive processes between computer-based and paper-pencil reading tasks in elementary grades? Recruitment of students occurred at the local school district's after-school programs. A total of 52 students from Grades 2-5 consented to participate in two conditions, a computer-based and a paper-pencil reading task, each lasting approximately 30 minutes. Observations, ratings, and semi-structured interviews were conducted. The quantitative portion included descriptive and correlational statistics. Differences in SLR metacognitive constructs between conditions and between grades were explored. Inferential statistics employed a 2 x 4 (condition-by-grade) mixed-model Analysis of Variance and follow-up tests. The qualitative portion included primary analytic strategies, thematic analysis, and triangulation across data sources. The results indicated that metacognitive self-regulated learning skills were present in students of primary grades. There were no differences between grades or between conditions for most regulation of cognition constructs except for control and evaluation practices. Among knowledge of cognition constructs, conditional knowledge was higher in the paper than in the computer reading assignment across grades. The qualitative findings corroborated the quantitative results. Students in primary grades demonstrated SRL metacognitive processes, and these were more common in the paper than in the computer condition. These findings are explained by the familiarity with the reading medium, the integration of multimedia and verbal cues, the speed for corrective actions, and the use of prior knowledge. These important insights can contribute to improved academic performance and higher order thinking among young students. The results also suggest that students can benefit from focused instruction to perform transfer of knowledge between the two reading formats - computer and paper.

The Outsiders (Study Guide) Mar 14 2022 Following Common Core Standards, this lesson plan for S.E. Hinton, "The Outsiders" is the perfect solution for teachers trying to get ideas for getting students excited about a book. BookCaps lesson plans cover five days worth of material. It includes a suggested reading schedule, discussion questions, essay topics, homework assignments, and suggested web resources. A separate book is also available that contains a companion study guide to the book.

Computers Supported Education Jan 24 2023 This book constitutes the thoroughly refereed proceedings of the 9th International Conference on Computer Supported Education, CSEDU 2017, held in Porto, Portugal, in April 2017. The 22 revised full papers were carefully reviewed and selected from 179 submissions. The papers deal with the following topics: new educational environments, best practices and case studies of innovative technology-based learning strategies, institutional policies on computer-supported education including open and distance education.
