From Cancer Patient to Cancer Survivor Nov 30 2020
With the risk of more than one in three getting cancer during a lifetime, each of us is likely to experience cancer, or know someone who has survived cancer. Although some cancer survivors recover with a renewed sense of life and purpose, what has often been ignored is the toll taken by cancer and its treatmentâ€"on health, functioning, sense of security, and well-being. Long lasting effects of treatment may be apparent shortly after its completion or arise years later. The transition from active treatment to post-treatment care is critical to long-term health. *From Cancer Patient to Cancer Survivor* focuses on survivors of adult cancer during the phase of care that follows primary treatment. The book raises awareness of the medical, functional, and psychosocial consequences of cancer and its treatment. It defines quality health care for cancer survivors and identifies strategies to achieve it. The book also recommends improvements in the quality of life of cancer survivors through policies that ensure their access to psychosocial services, fair employment practices, and health insurance. This book will be of particular interest to cancer patients and their advocates, health care providers and their leadership, health insurers, employers, research sponsors, and the public and their elected representatives.

Psychosocial Resource Variables in Cancer Studies
Aug 08 2021 *Psychosocial Resource Variables in Cancer Studies* reviews the literature on selected psychosocial resource variables in cancer in order to raise and examine conceptual and methodological issues and to offer suggestions for future directions in the field. It provides investigators and clinicians with a systematic treatment of the state of the art in research on specific resource factors and provides a careful consideration of more generic methodological and statistical issues in this research context. Editors Curbow and Somerfield define resources as aspects of a person or environment that are brought to bear on the maintenance or restoration of adaptation under taxing conditions. They hope *Psychosocial Resource Variables in Cancer Studies* is just the beginning of an ongoing discussion within the field of psychosocial oncology on the nature and use of resource variables. The book's topics are crucial since researchers appear to be committed to using resource variables to explain outcomes. Also, resource variables are increasingly considered as explanatory concepts in quality-of-life research. *Psychosocial Resource Variables in Cancer Studies* offers critical reviews of the major resource variables investigated in contemporary psychosocial oncology research. It provides timely information on vital issues in this research, emphasizing studies of the influence of personal and social resources on adaptation to cancer. Chapters cover topics such as: the use of resource variables in the explanation of individual differences in adaptation to cancer and cancer treatment theories, measures, and

methodological issues in the use of perceived control the use of the transactional model of coping to examine issues surrounding coping and the management of cancer demands religion and spirituality as resources in coping with cancer social support in adaptation to cancer and survival the clinical usefulness of research on psychosocial resources major measures of psychological functioning in psychosocial oncology research statistical and analytical issues in the use of resource variables roles of qualitative and quantitative approaches in exploring resource variables The editors begin with an overview of the oncology field and offer comments on issues that can be generalized to all psychosocial resource variables. Next is a presentation of a series of review papers on selected resource variables, including perceived control, coping, religion and spirituality, and social support, followed by a discussion of the clinical utility of research on these resource variables. The book concludes with a discussion of important cross-cutting methodological issues, including the selection of psychological functioning outcome measures, the statistical analysis of resource variables, and quantitative versus qualitative approaches. Psychosocial Resource Variables in Cancer is a valuable reference and guide for health psychologists, clinical health psychologists, clinical social workers in oncology, medical sociologists, medical anthropologists, and oncology nurses. It may also serve as important reading material for courses in health psychology, physiological factors in health and illness, personality and diseases, and stress and coping.

Cancer Clinical Trials: Proactive Strategies May 05 2021
Clinical trials remain the most important vehicle for improving the care of cancer patients. This text presents the fundamental components and challenges involving clinical investigations. Leading experts discuss the critical issues covering the spectrum of important topics from planning to application. The book has a foreword by Samuel A. Wells, Jr., MD, Professor of Surgery, Duke University Medical Center, Durham, NC, former Director of the American College of Surgeons and Founder of the American College of Surgeons Oncology Group.

Cancer Care for the Whole Patient Jan 25 2023
Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer--including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life--cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate

psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met.

Issues in Cancer Epidemiology and Research: 2013 Edition Apr 16 2022 Issues in Cancer Epidemiology and Research / 2013 Edition is a ScholarlyEditions™ book that delivers timely, authoritative, and comprehensive information about Oncology Research. The editors have built Issues in Cancer Epidemiology and Research: 2013 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Oncology Research in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Cancer Epidemiology and Research: 2013 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Common Issues in Breast Cancer Survivors Jun 18 2022 This book provides a clinically useful resource for evaluation and management of the symptoms and issues that burden survivors of breast cancer. Improvements to breast cancer screening and treatment have resulted in more patients than ever

before having been cured after local definitive and systemic therapies. Primary care providers and specialists must be increasingly familiar with the issues that breast cancer survivors routinely face. This is the first book to provide a single resource for common issues faced by breast cancer survivors from a truly multidisciplinary perspective; each chapter of this text is coauthored by at least one oncologist and one specialist outside the field of oncology in order to include the perspectives of relevant disciplines. User-friendly and clinically applicable to all specialties, individual chapters also include tables and figures that describe how best to conduct initial evaluation of the given symptom as well as an algorithm, where applicable, outlining the optimal management approach. *Common Issues in Breast Cancer Survivors: A Practical Guide to Evaluation and Management* empowers non-cancer specialists and practitioners who care for breast cancer survivors to address common issues that impact patient quality of life.

Cancer and Aging Handbook Oct 10 2021 A state-of-the-art, multidisciplinary approach to cancer and aging With the majority of cancers occurring in individuals over the age of 65 against a backdrop of an expanding aging population, there is an urgent need to integrate the areas of clinical oncology and geriatric care. This timely work tackles these issues head-on, presenting a truly multidisciplinary and international perspective on cancer and aging from world-renowned experts in geriatrics, oncology, behavioral science, psychology, gerontology, and public health. Unlike other books on geriatric oncology that focus mainly on treatment, *Cancer and*

Aging Handbook: Research and Practice examines all phases of the cancer care continuum, from prevention through evidence-based diagnosis and treatment to end-of-life care. Detailed clinical and research information helps guide readers on effective patient care as well as caregiver training, research, and intervention. Coverage includes: Epidemiology of cancer in older adults, plus the unique physical, mental, and social issues involved Strategies and guidelines for prevention, screening, and treatment of older individuals with cancer The most common cancers in the elderly, including breast, colorectal, lung, prostate, and ovarian cancer Cancer survivorship in older adults as well as the all-critical issues of palliative care and pain management Emerging topics such as caregiver and family issues, different models of care, and cost considerations An essential resource for clinicians and caregivers as well as researchers interested in this evolving field, *Cancer and Aging Handbook* is also useful for public health professionals and policymakers who need to formulate services and allocate resources for the growing population of older cancer patients.

The Unequal Burden of Cancer May 25 2020 We know more about cancer prevention, detection, and treatment than ever beforeâ€"yet not all segments of the U.S. population have benefited to the fullest extent possible from these advances. Some ethnic minorities experience more cancer than the majority population, and poor peopleâ€"no matter what their ethnicityâ€"often lack access to adequate cancer care. This book provides an authoritative view of cancer as it is experienced by ethnic minorities and

the medically underserved. It offers conclusions and recommendations in these areas: Defining and understanding special populations, and improving the collection of cancer-related data. Setting appropriate priorities for and increasing the effectiveness of specific National Institutes of Health (NIH) research programs, to ensure that special populations are represented in clinical trials. Disseminating research results to health professionals serving these populations, with sensitivity to the issues of cancer survivorship. The book provides background data on the nation's struggle against cancer, activities and expenditures of the NIH, and other relevant topics.

Identifying and Addressing the Needs of Adolescents and Young Adults with Cancer Jul 07 2021 Identifying and Addressing the Needs of Adolescents and Young Adults with Cancer is the summary of a workshop convened by the Institute of Medicine's National Cancer Policy Forum in July 2013 to facilitate discussion about gaps and challenges in caring for adolescent and young adult cancer patients and potential strategies and actions to improve the quality of their care. The workshop featured invited presentations from clinicians and other advocates working to improve the care and outcomes for the adolescent and young adult population with cancer. Cancer is the leading disease-related cause of death in adolescents and young adults. Each year nearly 70,000 people between the ages of 15 and 39 are diagnosed with cancer, approximately 8 times more than children under age 15. This population faces a variety of unique short- and long-term health and psychosocial issues, such as difficulty reentering

school, the workforce, or the dating scene; problems with infertility; cardiac, pulmonary, or other treatment repercussions; and secondary malignancies. Survivors are also at increased risk for psychiatric conditions such as anxiety, depression, substance abuse, and suicide and may have difficulty acquiring health insurance and paying for needed care.

Identifying and Addressing the Needs of Adolescents and Young Adults with Cancer discusses a variety of topics important to adolescent and young adult patients with cancer, including the ways in which cancers affecting this group differ from cancers in other age groups and what that implies about the best treatments for these cancer patients. This report identifies gaps and challenges in providing optimal care to adolescent and young adult patients with cancer and to discuss potential strategies and actions to address them.

Timely Diagnosis of Colorectal Cancer Jul 27 2020
This book summarizes current knowledge and outlines directions for the future on how to improve the art of diagnosing colorectal cancer with emphasis on timeliness, one of the most vital issues in cancer management. Using a comprehensive, multi-disciplinary approach, it provides an overview of decisive factors in timely diagnosis of colorectal cancer from symptom scores and symptom awareness to technical aspects. The book starts by discussing early diagnosis from the perspective of patients, including the importance of awareness in the general population as well as psychological aspects. It then goes on to discuss issues of importance to clinicians, such as fast tracking, laboratory testing, improving technical skills and optimizing

endoscopy services. In addition, more practical issues such as cost-effectiveness and auditing are also extensively discussed. By focusing on one specific but common form of cancer the content translates well across the scope of other cancer types and can be used by professionals working on different cancer types. This book provides clinicians, clinical researchers and policymakers with a comprehensive overview of the field of timeliness in diagnosing colorectal cancer. By addressing the challenges posed in the management of symptomatic patients it informs and educates the experts and could help improve diagnosis.

Issues in Cancer Treatment and Therapy: 2012 Edition Feb 14 2022 Issues in Cancer Treatment and Therapy / 2012 Edition is a ScholarlyBrief™ that delivers timely, authoritative, comprehensive, and specialized information about Surgical Oncology in a concise format. The editors have built Issues in Cancer Treatment and Therapy: 2012 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Surgical Oncology in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Cancer Treatment and Therapy: 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More

information is available at
<http://www.ScholarlyEditions.com/>.

The Cancer Patient and Supportive Care Sep 09 2021
During the course of editing 'Supportive Care in Cancer Therapy' (Martinus Nijhoff Publishers, 1983), it became apparent that several topics would have to await a second volume. Furthermore, development of new information and evolution of ideas continues. This volume continues the intent of the first to present reviews of issues relating to supportive care, and to identify areas where further definition and further research is needed. The physician reading this volume will find the contents thought-provoking. In addition to reviews authored by physicians, there are chapters authored by non-physicians, who present a different perspective and a different style of writing. Reverend Bigler writes from his long experience as a chaplain for cancer patients, and tries to identify the changes that take place in the personality of the chaplain who works with dying patients. Ms. Killion and Ms. Powell try to describe what an Oncology Nurse is, rather than what one does. Attorneys Reese and Price present a very practical summation of issues which face the cancer patient, and their chapter could easily be copied and offered to one's patients; furthermore, this chapter gives direction to the physician who is frequently called upon for advice regarding issues which lie entirely outside his/her formal training. Excellent reviews on more 'medical' subjects are here. 'Cancer in the Elderly' should provoke oncologists to re-examine their approach to the geriatric patient.

Cancer, Intimacy and Sexuality Apr 04 2021 This

book provides a wide-ranging overview of the sexual consequences of cancer and its treatment with the aim of equipping physicians and other health care providers with the awareness and knowledge required in order to offer patients effective treatment. While sexuality may not be the primary focus for cancer patients, at some point, whether because of sexual changes or relationship issues, many patients come to acknowledge the effects that cancer and its treatment have had on their sexuality. Although the impacts are frequently similar, significant variation is observed. Some patients experience changes in all phases of sexual response, while others experience none; moreover, the consequences of the effects may be felt differently by patients and partners. Unfortunately, many physicians and health care providers remain insufficiently aware of the impact of cancer on sexuality and/or lack knowledge about the concerns of patients and the available treatments and coping strategies. A further issue is the reticence of physicians to discuss sexuality and the fear of sexologists to talk to patients about cancer. Readers will find this book to be a rich source of help in overcoming these constraints and delivering suitable care to patients.

Issues in Cancer Prevention, Detection, and Screening Research and Practice: 2011 Edition Nov 23 2022 *Issues in Cancer Prevention, Detection, and Screening Research and Practice: 2011 Edition* is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Cancer Prevention, Detection, and Screening Research and Practice. The editors have built *Issues in*

Cancer Prevention, Detection, and Screening Research and Practice: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Cancer Prevention, Detection, and Screening Research and Practice in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of *Issues in Cancer Prevention, Detection, and Screening Research and Practice: 2011 Edition* has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Cancer Prevention and Screening Feb 20 2020 *Cancer Prevention and Screening* offers physicians and all clinical healthcare professionals a comprehensive, useful source of the latest information on cancer screening and prevention with both a global and a multidisciplinary perspective. Includes background information on epidemiology, cancer prevention, and cancer screening, for quick reference Offers the latest information for clinical application of the most recent techniques in prevention and screening of all major and many lesser cancer types Emphasises the importance of multidisciplinary teamwork in cancer screening Highlights frequent dilemmas and difficulties encountered during cancer screening Provides clear-cut clinical strategies for optimal

patient education, communication, and compliance with cancer prevention techniques

When Cancer Crosses Disciplines Nov 11 2021 Ever wondered if your patient's new symptoms are a manifestation of metastatic disease, treatment effects or are altogether unrelated to the cancer diagnosis; whether herbal remedies interact with cancer treatment; when to refer for genetic testing; or how to provide informed advice regarding dietary and lifestyle modifications?. This volume answers these and many other questions, spanning from cancer prevention to palliative care. Each chapter is comprehensively referenced, to allow the reader to explore related fields in more detail. The book is unique in summarizing a large amount of information that is beyond conventional oncology textbooks. While cancer is treated by multidisciplinary teams of medical oncologists, hematologists, surgeons and radiation oncologists, other specialists are called upon to treat symptoms, side effects or other diseases that can occur concurrently with cancer. In addition to the physical challenges brought about by a cancer diagnosis, patients and their relatives need sensitive and skilled psychosocial support throughout the cancer journey. The book brings together specialists from a wide range of medical, surgical, psychological and supportive specialties, while keeping the focus on the interdisciplinary management of cancer. Sample Chapter(s). Foreword (57 KB). Chapter 1: Cancer and Tobacco: Its Effects on Individuals and Populations (810 KB). Contents: Cancer Prevention: Cancer and the Epidemiologist; Interdisciplinary Management Issues in Cancer Treatment: Beyond Cancer Treatment; Cancer and the

Surgeon; Cancer and the Physician; Cancer and the Geneticist; Surviving Cancer: Survivorship Issues; Cancer, Palliative Care and End of Life Issues.

Readership: Practicing medical, surgical and radiation oncologists; hematologists; psychologists; basic and advanced trainees; primary care practitioners; nurses; medical students; and others interested in the field of oncology.

Ensuring Quality Cancer Care Jun 06 2021 We all want to believe that when people get cancer, they will receive medical care of the highest quality. Even as new scientific breakthroughs are announced, though, many cancer patients may be getting the wrong care, too little care, or too much care, in the form of unnecessary procedures. How close is American medicine to the ideal of quality cancer care for every person with cancer? Ensuring Quality Cancer Care provides a comprehensive picture of how cancer care is delivered in our nation, from early detection to end-of-life issues. The National Cancer Policy Board defines quality care and recommends how to monitor, measure, and extend quality care to all people with cancer. Approaches to accountability in health care are reviewed. What keeps people from getting care? The book explains how lack of medical coverage, social and economic status, patient beliefs, physician decision-making, and other factors can stand between the patient and the best possible care. The board explores how cancer care is shaped by the current focus on evidence-based medicine, the widespread adoption of managed care, where services are provided, and who provides care. Specific shortfalls in the care of breast and prostate cancer are identified. A status report on

health services research is included. *Ensuring Quality Cancer Care* offers wide-ranging data and information in clear context. As the baby boomers approach the years when most cancer occurs, this timely volume will be of special interest to health policy makers, public and private healthcare purchasers, medical professionals, patient advocates, researchers, and people with cancer.

Issues in Cancer Treatment and Therapy: 2013 Edition Sep 21 2022 *Issues in Cancer Treatment and Therapy / 2013 Edition* is a ScholarlyBrief™ that delivers timely, authoritative, comprehensive, and specialized information about Additional Research in a concise format. The editors have built *Issues in Cancer Treatment and Therapy: 2013 Edition* on the vast information databases of ScholarlyNews.™ You can expect the information about Additional Research in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of *Issues in Cancer Treatment and Therapy: 2013 Edition* has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Improving Cancer Diagnosis and Care Dec 20 2019
Rapid advances in cancer research, the development of new and more sophisticated approaches to

diagnostic testing, and the growth in targeted cancer therapies are transforming the landscape of cancer diagnosis and care. These innovations have contributed to improved outcomes for patients with cancer, but they have also increased the complexity involved in diagnosis and subsequent care decisions. To examine opportunities to improve cancer diagnosis and care, the National Academies of Sciences, Engineering, and Medicine developed a two-workshop series. The first workshop, held on February 12-13, 2018, in Washington, DC, focused on potential strategies to ensure that patients have access to appropriate expertise and technologies in oncologic pathology and imaging to inform their cancer diagnosis and treatment planning, as well as assessment of treatment response and surveillance. This publication chronicles the presentations and discussions at the workshop.

Issues in Cancer Treatment: 2012 Edition Dec 24 2022 *Issues in Cancer Treatment / 2012 Edition* is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Clinical Oncology. The editors have built *Issues in Cancer Treatment: 2012 Edition* on the vast information databases of ScholarlyNews.™ You can expect the information about Clinical Oncology in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of *Issues in Cancer Treatment: 2012 Edition* has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and

edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Treating Vulnerable Populations of Cancer Survivors: A Biopsychosocial Approach Jan 01 2021
This competence-building resource synthesizes a rich trove of conceptual and practical information on treating cancer survivors at risk of being underserved. Spotlighting a diverse group of ethnic and other demographic populations surviving diverse forms of cancer, the book models the assessing of needs and the developing of strategies to meet them. The multiple burden of cancer-medical and psychosocial problems, discrimination and stigma, quality of life issues—is described in depth as it affects different cultural and age populations. Contributors also present interventions that effectively and meaningfully address these complex intersections of physical, emotional, interpersonal, and layered social concerns. Included among the topics: Providing psychosocial distress screening, coping resources and self-care to newly diagnosed cancer survivors. Latino cancer survivors: the old and the young. An exploration of Latvian immigrants' cancer experience and implications for supportive interventions. Survivorship issues among Muslim women with cancer. How art therapy can benefit the quality of life of young breast cancer survivors. The family caregiver as cancer survivor: supporting and promoting positive bereavement outcomes. Unique among the survivor literature, *Treating Vulnerable Populations of Cancer Survivors* ably assists health

psychologists, social workers, and nurses in providing services to patients facing special challenges during recovery.

The American Cancer Society's Principles of Oncology Mar 15 2022 Developed by the American Cancer Society this new textbook designed for a wide range of learners and practitioners is a comprehensive reference covering the diagnosis of cancer, and a range of related issues that are key to a multidisciplinary approach to cancer and critical to cancer control and may be used in conjunction with the book, *The American Cancer Society's Oncology in Practice: Clinical Management*. Edited by leading clinicians in the field and a stellar contributor list from the US and Europe, this book is written in an easy to understand style by multidisciplinary teams of medical oncologists, radiation oncologists and other specialists, reflecting day-to-day decision-making and clinical practice. Input from pathologists, surgeons, radiologists, and other specialists is included wherever relevant and comprehensive treatment guidelines are provided by expert contributors where there is no standard recognized treatment. This book is an ideal resource for anyone seeking a deeper understanding of cancer prevention, screening, and follow-up, which are central to the ACS's worldwide mission on cancer control.

Transforming Clinical Research in the United States May 17 2022 An ideal health care system relies on efficiently generating timely, accurate evidence to deliver on its promise of diminishing the divide between clinical practice and research. There are growing indications, however, that the current

health care system and the clinical research that guides medical decisions in the United States falls far short of this vision. The process of generating medical evidence through clinical trials in the United States is expensive and lengthy, includes a number of regulatory hurdles, and is based on a limited infrastructure. The link between clinical research and medical progress is also frequently misunderstood or unsupported by both patients and providers. The focus of clinical research changes as diseases emerge and new treatments create cures for old conditions. As diseases evolve, the ultimate goal remains to speed new and improved medical treatments to patients throughout the world. To keep pace with rapidly changing health care demands, clinical research resources need to be organized and on hand to address the numerous health care questions that continually emerge. Improving the overall capacity of the clinical research enterprise will depend on ensuring that there is an adequate infrastructure in place to support the investigators who conduct research, the patients with real diseases who volunteer to participate in experimental research, and the institutions that organize and carry out the trials. To address these issues and better understand the current state of clinical research in the United States, the Institute of Medicine's (IOM) Forum on Drug Discovery, Development, and Translation held a 2-day workshop entitled *Transforming Clinical Research in the United States*. The workshop, summarized in this volume, laid the foundation for a broader initiative of the Forum addressing different aspects of clinical research. Future Forum plans include

further examining regulatory, administrative, and structural barriers to the effective conduct of clinical research; developing a vision for a stable, continuously funded clinical research infrastructure in the United States; and considering strategies and collaborative activities to facilitate more robust public engagement in the clinical research enterprise.

Delivering Affordable Cancer Care in the 21st Century Aug 20 2022 Rising health care costs are a central fiscal challenge confronting the United States. National spending on health care currently accounts for 18 percent of gross domestic product (GDP), but is anticipated to increase to 25 percent of GDP by 2037. The Bipartisan Policy Center argues that "this rapid growth in health expenditures creates an unsustainable burden on America's economy, with far-reaching consequences". These consequences include crowding out many national priorities, including investments in education, infrastructure, and research; stagnation of employee wages; and decreased international competitiveness. In spite of health care costs that far exceed those of other countries, health outcomes in the United States are not considerably better. With the goal of ensuring that patients have access to high-quality, affordable cancer care, the Institute of Medicine's (IOM's) National Cancer Policy Forum convened a public workshop, *Delivering Affordable Cancer Care in the 21st Century*, October 8-9, 2012, in Washington, DC. *Delivering Affordable Cancer Care in the 21st Century* summarizes the workshop.

Problem Solving in Cancer and Fertility Oct 18 2019

The treatment of cancer in young women and men is increasingly turning from focusing purely on survival to a recognition of the long-term effects of treatment on subsequent quality of life. In this regard, fertility is a very high priority for patients. This is the first book to explain the latest techniques in fertility preservation. Chapters cover fertility preservation in both women and men, management of cancer in pregnancy, egg donation and surrogacy, hormone replacement options, counselling and ethical issues. A multidisciplinary team of over 60 specialists were involved in this work, with contributions from leading obstetricians, medical oncologists, gynaecological oncologists, urologists and fertility specialists. The book is formally supported by the Association of Cancer Physicians (ACP). This highly patient-centred, readable text will be of value to a wide range of clinicians and physicians, and doctors in training, in their daily work.

Meeting Psychosocial Needs of Women with Breast Cancer Aug 28 2020 In Meeting Psychosocial Needs of Women with Breast Cancer, the National Cancer Policy Board of the Institute of Medicine examines the psychosocial consequences of the cancer experience. The book focuses specifically on breast cancer in women because this group has the largest survivor population (over 2 million) and this disease is the most extensively studied cancer from the standpoint of psychosocial effects. The book characterizes the psychosocial consequences of a diagnosis of breast cancer, describes psychosocial services and how they are delivered, and evaluates their effectiveness. It assesses the status of professional education and

training and applied clinical and health services research and proposes policies to improve the quality of care and quality of life for women with breast cancer and their families. Because cancer of the breast is likely a good model for cancer at other sites, recommendations for this cancer should be applicable to the psychosocial care provided generally to individuals with cancer. For breast cancer, and indeed probably for any cancer, the report finds that psychosocial services can provide significant benefits in quality of life and success in coping with serious and life-threatening disease for patients and their families.

Thrombosis and Hemostasis Issues in Cancer Apr 23 2020

Tele-oncology Jan 13 2022 This book explains how telemedicine can offer solutions capable of improving the care and survival rates of cancer patients and can also help patients to live a normal life in spite of their condition. Different fields of application - community, hospital and home based - are examined, and detailed attention is paid to the use of tele-oncology in rural/extreme rural settings and in developing countries. The impact of new technologies and the opportunities afforded by the social web are both discussed. The concluding chapters consider eLearning in relation to cancer care and assess the scope for education to improve prevention. No medical condition can shatter people's lives as cancer does today and the need to develop strategies to reduce the disease burden and improve quality of life is paramount. Readers will find this new volume in Springer's TElE Health series to be a rich source of information on the

important contribution that can be made by telemedicine in achieving these goals.

Delivering High-Quality Cancer Care Sep 28 2020 In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis presents a conceptual

framework for improving the quality of cancer care. This study proposes improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. *Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis* provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the quality of life and outcomes for people facing a cancer diagnosis.

Cancer Caregiving in the United States Oct 22 2022 Despite advances in detection and treatment, cancer remains a source of pain and distress to patients and of complex challenges to the loved ones caring for them. The trend toward shorter hospital stays in particular has increased the physical, psychological, and financial burden on caregivers, often leading to adverse effects on patients. *Cancer Caregiving in the United States* illuminates these complex concerns with authoritative detail. This wide-ranging volume provides a comprehensive survey of cancer-related issues, including those affecting

the care triad (patients-family members-professionals) and quality of care as well as the numerous physical, emotional, and financial challenges that caregivers may need to confront. Sources of caregiver difficulty at each stage of the disease, from diagnosis to end of life, are explored. Each chapter analyzes its topic in terms of practice, research, education, and policy, providing a wealth of literature reviews, assessment and care models, interventions, and recommendations for future study and practice. Coverage includes: Caregiving issues for cancer patients with long-term, short-term, and intermittent needs. Family caregivers as members of the treatment team. The impact of health disparities on caregivers. Cancer care policy and advocacy. End-of-life issues for cancer caregivers. Legal, financial, and ethical issues. Cancer Caregiving in the United States is a core reference for researchers, professionals/scientist-practitioners, and graduate students in such caregiving fields as clinical psychology, social work, nursing, public health and medicine, social policy, and educational policy.

Topics in Cancer Survivorship Nov 18 2019 Cancer is now the leading cause of death in the world. In the U.S., one in two men and one in three women will be diagnosed with a non-skin cancer in their lifetime. Cancer patients are living longer than ever before. For instance, when detected early, the five-year survival for breast cancer is 98%, and it is about 84% in patients with regional disease. However, the diagnosis and treatment of cancer is very distressing. Cancer patients frequently suffer from pain, disfigurement, depression, fatigue, physical

dysfunctions, frequent visits to doctors and hospitals, multiple tests and procedures with the possibility of treatment complications, and the financial impact of the diagnosis on their life. This book presents a number of ways that can help cancer patients to look, feel and become healthier, take care of specific symptoms such as hair loss, arm swelling, and shortness of breath, and improve their intimacy, sexuality, and fertility.

Ethical Challenges in Cancer Diagnosis and Therapy
Jun 25 2020 This book presents in detail the problems and ethical challenges in daily oncological practice. In western industrialized countries, roughly 25 percent of all citizens still die from cancer. Despite significant progress in basic science and in individual areas of clinical care, even in the 21st century, being diagnosed with cancer has lost none of its dread and can still be a death sentence. This situation raises many problems and challenges for medical ethics, e.g., the question of the benefits and risks of prevention programs, or the right to know and not to know. Clinical trials with cancer patients and quality assurance for surgery, radiotherapy and medication also pose a series of ethical dilemmas. Furthermore, cancer treatment is a psychological challenge not only for patients but also for physicians and caregivers. The issues of adequate pain management and good palliative care, of treatment limiting and the question of assisted suicide at the end of life also have to be considered. In order to reflect the subject's diverse and multifaceted nature, the book incorporates legal, ethnographic, historical and literary perspectives into ethical considerations.

Abeloff's Clinical Oncology E-Book Jan 21 2020

Carrying on the tradition established by its founding editor, the late Dr. Martin Abeloff, the 4th Edition of this respected reference synthesizes all of the latest oncology knowledge in one practical, clinically focused, easy-to-use volume. It incorporates basic science, pathology, diagnosis, management, outcomes, rehabilitation, and prevention - all in one convenient resource - equipping you to overcome your toughest clinical challenges. What's more, you can access the complete contents of this Expert Consult title online, and tap into its unparalleled guidance wherever and whenever you need it most! Equips you to select the most appropriate tests and imaging studies for diagnosing and staging each type of cancer, and manage your patients most effectively using all of the latest techniques and approaches. Explores all of the latest scientific discoveries' implications for cancer diagnosis and management. Employs a multidisciplinary approach - with contributions from pathologists, radiation oncologists, medical oncologists, and surgical oncologists - for well-rounded perspectives on the problems you face. Offers a user-friendly layout with a consistent chapter format • summary boxes • a full-color design • and more than 1,445 illustrations (1,200 in full color), to make reference easy and efficient. Offers access to the book's complete contents online - fully searchable - from anyplace with an Internet connection. Presents discussions on cutting-edge new topics including nanotechnology, functional imaging, signal transduction inhibitors, hormone modulators, complications of transplantation, and much more.

Includes an expanded color art program that highlights key points, illustrates relevant science and clinical problems, and enhances your understanding of complex concepts.

Update in Cancer Screening, An Issue of Medical Clinics of North America, E-Book Mar 23 2020 This issue of *Medical Clinics*, guest edited by Dr. Robert A. Smith and Dr. Kevin Oeffinger, is devoted to *Cancer Screening and Prevention*. Articles in this important issue cover the development of cancer screening guidelines, implementing cancer screening in the clinical setting, and screening for colorectal, lung, cervical, prostate, skin, and ovarian cancer.

Holland-Frei Cancer Medicine Feb 02 2021 *Holland-Frei Cancer Medicine, Ninth Edition*, offers a balanced view of the most current knowledge of cancer science and clinical oncology practice. This all-new edition is the consummate reference source for medical oncologists, radiation oncologists, internists, surgical oncologists, and others who treat cancer patients. A translational perspective throughout, integrating cancer biology with cancer management providing an in depth understanding of the disease An emphasis on multidisciplinary, research-driven patient care to improve outcomes and optimal use of all appropriate therapies Cutting-edge coverage of personalized cancer care, including molecular diagnostics and therapeutics Concise, readable, clinically relevant text with algorithms, guidelines and insight into the use of both conventional and novel drugs Includes free access to the *Wiley Digital Edition* providing search across the book, the full reference list with web links,

illustrations and photographs, and post-publication updates

Cancer Care in Low-Resource Areas Dec 12 2021

Though cancer was once considered to be a problem primarily in wealthy nations, low- and middle-income countries now bear a majority share of the global cancer burden, and cancer often surpasses the burden of infectious diseases in these countries. Effective low-cost cancer control options are available for some malignancies, with the World Health Organization estimating that these interventions could facilitate the prevention of approximately one-third of cancer deaths worldwide. But these interventions remain inaccessible for many people in the world, especially those residing in low-resource communities that are characterized by a lack of funds " on an individual or societal basis " to cover health infrastructure and care costs. Few guidelines and strategies for cancer control consider the appropriateness and feasibility of interventions in low-resource settings, and may undermine the effectiveness of these efforts. For example, interventions that are designed for high-resource settings may not account for important considerations in low-resource settings, such as resource constraints, infrastructure requirements, or whether a community has the capacity to deliver downstream cancer care. Patients in resource-constrained communities continue to face delayed diagnoses of cancer, potentially resulting in the diagnosis of later stage cancers and worsened patient outcomes. In addition, social stigmas, geopolitical issues, and cultural norms may limit access to cancer care in certain communities.

Recognizing the challenges of providing cancer care in these settings, the National Academies of Sciences, Engineering, and Medicine developed a workshop series examining cancer care in low-resource communities. This report summarizes the presentations and discussions from the first workshop, which focused on cancer prevention and early detection.

The Surgeon General's Call to Action to Prevent Skin Cancer Mar 03 2021 Skin cancer is the most commonly diagnosed cancer in the United States, yet most cases are preventable. Every year in the United States, nearly 5 million people are treated for skin cancer, at an estimated cost of \$8.1 billion. Melanoma, the most deadly form of skin cancer, causes nearly 9,000 deaths each year. Despite recent efforts to address risk factors, skin cancer rates continue to rise. While those with lighter skin are more susceptible, anyone can get skin cancer—and it can be serious, even deadly. Almost all of the conditions can be caused by unnecessary ultraviolet (UV) radiation exposure, usually from excessive time in the sun or from the use of indoor tanning devices. It is alarming that every year, nearly one out of every three young white women aged 16–25 engages in indoor tanning. It's important to shatter the myth that tanned skin is a sign of health. And a “base” tan is not a “safe” tan. Tanned skin is damaged skin. Understanding the risk of UV exposure is crucial to protecting ourselves and our loved ones. That is why “The Surgeon General's Call to Action to Prevent Skin Cancer” is important for all of us. It outlines action steps we can all take—as individuals, parents, educators, employers, policy

makers, health care professionals, and communities—to reverse this alarming trend. As a nation, we can all do more to address skin cancer as a serious public health challenge. Everyone is urged to find out more about the risk of skin cancer—and what we all can do to prevent it.

Issues in Cancer Prevention, Detection, and Screening Research and Practice: 2012 Edition Jul 19 2022 *Issues in Cancer Prevention, Detection, and Screening Research and Practice: 2012 Edition* is a ScholarlyBrief™ that delivers timely, authoritative, comprehensive, and specialized information about Cytopathology in a concise format. The editors have built *Issues in Cancer Prevention, Detection, and Screening Research and Practice: 2012 Edition* on the vast information databases of ScholarlyNews.™ You can expect the information about Cytopathology in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of *Issues in Cancer Prevention, Detection, and Screening Research and Practice: 2012 Edition* has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Establishing Effective Patient Navigation Programs in Oncology Oct 30 2020 Delivering high-quality cancer care to all patients presents numerous

challenges, including difficulties with care coordination and access. Patient navigation is a community-based service delivery intervention designed to promote access to timely diagnosis and treatment of cancer and other chronic diseases by eliminating barriers to care, and has often been proposed and implemented to address these challenges. However, unresolved questions include where patient navigation programs should be deployed, and which patients should be prioritized to receive navigation services when resources are limited. To address these issues and facilitate discussion on how to improve navigation services for patients with cancer, the National Cancer Policy Forum of the National Academies of Sciences, Engineering, and Medicine held a workshop on November 13 and 14, 2017. At this workshop, a broad range of experts and stakeholders, including clinicians, navigators, researchers, and patients, explored which patients need navigation and who should serve as navigators, and the benefits of navigation and current gaps in the evidence base.

Ethical Issues in Cancer Patient Care Feb 26 2023
Peter Angelos Numerous ethical issues arise in the care of oncology patients. Although much has been written in the last several decades on ethical issues in caring for patients, few volumes have sought to focus the exploration on ethical issues particularly relevant to the care of cancer patients. In 1999, the first edition of this book was published. Since that time, many changes have occurred in how some cancers are diagnosed and treated, but the central ethical issues have continued to challenge patients, families, and their

health care providers. All of the chapters from the prior edition have been updated and there are seven new chapters in this expanded edition. In this second edition, the perspectives on what is an ethical issue have been broadened by bringing authors of differing backgrounds into the discussion. In Chapter 1, the perspective of a cancer patient is provided as an open letter to physicians. Although Parvez Kamangar is providing only one patient's perspective, this is an essential voice that is not often heard in texts on medical ethics. In Chapters 2 and 3, the issues of communication and the physician-patient relationship are explored in order to better understand how the needs of patients and families can be met. In Chapter 4, Professor Tod Chambers highlights the challenges to providing ethical care to patients in a multicultural society.
