World Art Oct 18

2019 What do we

mean by 'art'? As a
category of objects,
the concept belongs

to a Western

cultural tradition,

originally European

and now

increasingly global,

but how useful is it

for understanding

other traditions? To

understand art as a

universal human

value, we need to

look at how the

concept was

constructed in

order to reconstruct

it through an

understanding of

the wider world.

Western art values

have a pervasive

influence upon non-

Western cultures

and upon Western

attitudes to them.

This innovative yet

accessible new text

explores the ways

theories of art

developed as Western knowledge of the world expanded through exploration and trade, conquest, colonisation and research into other cultures, present and past. It considers the issues arising from the historical relationships which brought diverse artistic traditions together under the influence of Western art values, looking at how art has been used by colonisers and colonised in the causes of collecting and commerce, cultural hegemony and autonomous identities. World Art questions conventional Western assumptions of art from an anthropological

perspective which allows comparison between cultures. It treats art as a property of artefacts rather than a category of objects, reclaiming the idea of 'world art' from the 'art world'. This book is essential reading for all students on anthropology of art courses as well as students of museum studies and art history, based on a wide range of case studies and supported by learning features such as annotated further reading and chapter opening summaries. [The Hopes of Snakes](#) Jan 21 2020 In *The Hopes of Snakes*, Lisa Couturier brings together the best of her essays on urban and suburban

nature throughout the Northeast, from Washington, DC, to Boston. Her sharp eye and deep humanity have found what is remarkable in city nature and illuminated it for readers like no one before her. *Carl Gustaf von Rosen* Jan 01 2021 In medieval romance literature, a knight-errant is a traveller of noble birth in search of adventures in which to exhibit military skill, valour and generosity. Count Carl Gustaf von Rosen was all that, although he did not explicitly look for adventures. His forty-year flying career took him to different parts of the world, giving him a bird's-eye view of the unfair

distribution of global wealth. He started as a Red Cross pilot in Ethiopia during the Italian war of 1935-1936, he built an Air Force for Emperor Haile Selassie from 1946 to 1956, and he experienced the painful birth of new African states after the colonial era. He became personally involved in the Nigerian conflict on the side of the breakaway, starving Biafra, creating a tiny air unit of rocket-armed, 100 HP trainer aircraft, to destroy, on the ground, the aggressive Nigerian military jets flown by mercenaries announcing their presence over Biafra with: "This is Genocide calling",

before dropping the bombs. In the early 1970's when drought hit Ethiopia, von Rosen launched a method of food drops from the air to starving mountain villagers. His son Eric and daughter-in-law Heli worked with him for two years, witnessing the revolution, the Red Terror of the military junta, and the growing conflict between Ethiopia and Somalia; both claiming possession of the semi-desert region of Ogaden. Ultimately, this conflict caused the death of Carl Gustaf von Rosen. He was killed in a Somali attack on Gode in July 1977. Heli von Rosen tells the story. Teach Yourself Visually ILife '04

Practical health and wellness strategies for real life from Lauren Imperato, creator of the I.AM.YOU. lifestyle brand and yoga studio. Rest to rage. Meditate to work. Cleanse to get dirty. Enough preaching about self-deprivation. No more striving for bodily purity. Who has the patience—or the time!—for strict dietary restrictions and hours of meditation? Let's get real. These tactics just don't work—at least not for long. But that doesn't mean health and happiness are unobtainable. Most often you just need

an anxiety buster you can do while running down the street. Or a yoga pose you can do at your desk. Or a way to debloat what feels like an alien baby in your abdomen. Retox isn't about changing who you are or denying life's pleasures. It's about tailoring sensible, scientifically-based health practices to the life you already live. It's about working hard, playing harder, and renewing your balance and energy so you can do it all again. In Retox, health expert Lauren Imperato strips yoga down to its anatomical principles, offering practical tips for fast relief. Then, drawing from a

variety of disciplines—from psychology to nutrition to Tibetan philosophy—she designs no-nonsense strategies and delicious recipes to combat the most common challenges of modern life: • Stress and anxiety • Low energy • Back pain and headaches • Hangovers • PMS • Sleep Deprivation • And much more...

**Holocaust
Literature and
Representation**
Aug 08 2021 Each
scholar working in
the field of
Holocaust literature

and representation has a story to tell. Not only the scholarly story of the work they do, but their personal story, their journey to becoming a specialist in Holocaust studies. What academic, political, cultural, and personal experiences led them to choose Holocaust representation as their subject of research and teaching? What challenges did they face on their journey? What approaches, genres, media, or other forms of Holocaust representation did they choose and why? How and where did they find a scholarly "home" in which to share their work productively? Have

political, social, and cultural conditions today affected how they think about their work on Holocaust representation? How do they imagine their work moving forward, including new challenges, responses, and audiences? These are but a few of the questions that the authors in this volume address, showing how a scholar's field of research and resulting writings are not arbitrary, and are often informed by their personal history and professional experiences. *Software Engineering and Information Technology - Proceedings of the 2015 International*

The SEIT2015 has been an important event and has attracted many scientists, engineers and researchers from academia, government laboratories and industry internationally. The papers in this book were selected after rigorous review. SEIT2015 focuses on six main

areas, namely, Information Technology, Computer Intelligence and Computer Applications, Algorithm and Simulation, Signal and Image Processing, Electrical Engineering and Software Engineering. SEIT2015 aims to provide a platform for the global researchers and practitioners from both academia as well as industry to meet and share cutting-edge development in the field. This conference has been a valuable opportunity for researchers to share their knowledge and results in theory, methodology and

applications of Software Engineering and Information Technology. *Census of India, 1961: India* Nov 30 2020 Jacob Marley's Christmas Carol Jul 07 2021 THE STORY: Marley was dead, to begin with...--and what happens to Ebenezer Scrooge's mean, sour, prune-y old business partner after that? Good to Great Apr 04 2021 The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the very beginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring

greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock

returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different? Why did one set of companies become truly great performers while the other set remained only good? Over five

years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve

greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. "Some of the key concepts discerned in the study,"

comments Jim Collins, "fly in the face of our modern business culture and will, quite frankly, upset some people." Perhaps, but who can afford to ignore these findings?

Race Migrations

Mar 23 2020 In this groundbreaking study of Puerto Rican and Dominican migration to the United States, Wendy D. Roth explores the influence of migration on changing cultural conceptions of race—for the newcomers, for their host society, and for those who remain in the countries left behind. Just as migrants can gain new language proficiencies, they

can pick up new understandings of race. But adopting an American idea about race does not mean abandoning earlier ideas. New racial schemas transfer across borders and cultures spread between sending and host countries. Behind many current debates on immigration is the question of how Latinos will integrate and where they fit into the U.S. racial structure. *Race Migrations* shows that these migrants increasingly see themselves as a Latino racial group. Although U.S. race relations are becoming more "Latin Americanized" by the presence of Latinos and their

views about race, race in the home countries is also becoming more "Americanized" through the cultural influence of those who go abroad. Ultimately, Roth shows that several systems of racial classification and stratification co-exist in each place, in the minds of individuals and in their shared cultural understandings of "how race works."
