**Elephants on the Edge Feb 25 2021 "At times sad and at times heartwarming . . . Helps us to understand not only elephants, but all animals, including ourselves" (Peter Singer, author of Animal Liberation). Drawing on accounts from India to Africa and California to Tennessee, and on research in neuroscience, psychology, and animal behavior, G. A. Bradshaw explores the minds, emotions, and lives of elephants. Wars, starvation, mass culls, poaching, and habitat loss have reduced elephant numbers from more than ten million to a few hundred thousand, leaving orphans bereft of the elders who would normally mentor them. As a consequence, traumatized elephants have become aggressive against people, other animals, and even one another; their behavior is comparable to that of humans who have experienced genocide, other types of violence, and social collapse. By exploring the**

**elephant mind and experience in the wild and in captivity, Bradshaw bears witness to the breakdown of ancient elephant cultures. But, she reminds us, all is not lost. People are working to save elephants by rescuing orphaned infants and rehabilitating adult zoo and circus elephants, using the same principles psychologists apply in treating humans who have survived trauma. Bradshaw urges us to support these and other models of elephant recovery and to solve pressing social and environmental crises affecting all animals—humans included. “This book opens the door into the soul of the elephant. It will really make you think about our relationship with other animals.” —Temple Grandin, author of *Animals in Translation***

**The Elephants of Africa Nov 12 2019 Elephants have captured man's imagination and respect for thousands of years. In some ways we can draw close parallels between humans and elephants. Like humans, elephants have the capacity to modify their habitats dramatically, and their need for space often brings them into direct conflict with expanding human populations. Elephants, like our own species, are noted for their intelligence, close family ties and social complexity. In other ways, they remain mysteriously different. The present array of paintings vividly explores my enduring fascination with the elephants of Africa.**

**"Stand Back," Said the Elephant, "I'm Going to Sneeze!" Oct 12 2019 All the animals are in a panic. The elephant's sneeze would blow the monkeys out of the trees, the feathers off the birds, the stripes off the zebra. Even the fish and the fly, the crocodile and the kangaroo, know**

**In**Elephants Have the Right of Way, Dr. William D. Stewart fondly recalls a two-year stint in the late-1960's when he and his wife took their four small children to Uganda so he could teach at an African girls' school. In doing so, the entire Stewart family was transported from a modern upstate New York college campus to the jungles of East Africa. In this riveting book, Dr. Stewart recalls the journey of a lifetime to a place full of deadly snakes, wild animals, diseases without modern medicine, and a land where elephants literally did have the right of way on the roads.

**Photographs have been selected from among Africa's best wildlife photographers, and the Foreword is provided by Prince William. It is hoped this book will create awareness of the devastating loss of elephant lives in Africa and stem the tide of poaching and hunting; that it will inspire the delegates to CITES to make informed decisions to ensure that all loopholes in the ivory trade are closed; and that countries receiving and using ivory (both legal and poached) - primarily China, Vietnam, Laos and Japan - ban and strenuously police its trade and use within their borders, actively pursuing and arresting syndicate leaders driving the cruel poaching tsunami. This book is also a tribute to the many people who work for the welfare of elephants, particularly those who risk their lives for wildlife each day, often for little or no pay - in particular the field rangers and the anti-poaching teams; and to the many communities around Africa that have elected to work with elephants and not against them. The Last Elephants - is the title prophetic? We hope not, but the signs are worrying.**

**Looking at an Elephant, veteran scientific writer Dale Peterson has collected thirty-three essential writings about elephants from across history, with geographical perspectives ranging from Africa and Southeast Asia to Europe and the United States. An introductory headnote for each selection provides additional context and insights from Peterson's substantial knowledge of elephants and natural history. The first section of the anthology, "Cultural and Classical Elephants," explores the earliest mentions of elephants in African mythology, Hindu theology, and Aristotle and other ancient Greek texts. "Colonial and Industrial Elephants" finds elephants in the crosshairs of colonial exploitation in accounts pulled from memoirs commoditizing African elephants as a source of ivory, novel targets for bloodsport, and occasional export for circuses and zoos. "Working and Performing Elephants" gives firsthand accounts of the often cruel training methods and treatment inflicted on elephants to achieve submission and obedience. As elephants became an object of scientific curiosity in the mid-twentieth century, wildlife biologists explored elephant families and kinship, behaviors around sex and love, language and self-**

awareness, and enhanced communications with sound and smell. The pieces featured in “Scientific and Social Elephants” give readers a glimpse into major discoveries in elephant behaviors. “Endangered Elephants” points to the future of the elephant, whose numbers continue to be ravaged by ivory poachers. Peterson concludes with a section on fictional and literary elephants and ends on a hopeful note with the 1967 essay “Dear Elephant, Sir,” which argues for the moral imperative to save elephants as an act of redemption for their systematic abuse and mistreatment at human hands. Essential to understanding the history and experience of this beloved and misunderstood creature, *Thirty-Three Ways of Looking at an Elephant* is a must for any elephant lover or armchair environmentalist.

**revealed. There may be stories you have heard**

**about elephants. Now the question is, "Are those stores fact or fiction? Are they true or false?" One**

**bit of information you may have heard is that**

**elephants have a good memory. That is very true!**

**It is so true, that it is believed that elephants**

**have a better memory than humans do. Elephants**

**can remember other elephants that they may not**

**have seen in years. They can also remember**

**being treated unkindly by someone even though**

**many years may have passed. Another story that**

**is often thought about with elephants is, "Are**

**they afraid of mice?" You might have heard that**

elephants fear mice because they can run up the elephant's trunk. But the answer here is that this story is not true, and there is no proof of any kind to support this. It may not surprise you know that the elephants of today are related to the Ice Age Mammoth. At one time there were over 350 different species of elephants, yet today we have only two species left! Can you name the two species? What you may be surprised to learn is that elephants were not always the large creatures you see today. In fact, in prehistoric times, the elephant was as small as the size of a cow or pig. Would it surprise you to learn that the elephants of today are related to the sea cow known as the Manatee? Did you know that when the elephants flap their ears they do it for a reason? Or do you know what jobs the elephants use their tusks for? An elephant's tusk can be smaller on one side than the other. Do you know the reason why? Did you know that a female elephant will spend her whole life in one herd, while the male elephant usually live their lives alone sometime after the age of 14? As you can see, there are many interesting things that can be learned about this tremendous sized animal with the ivory tusks.
