A Computer Manual for Conceptual Learners May 06 2021

The "Miss Manners Goes Geek" beginner's manual for Windows, specifically created for conceptual learners. Because computer use is no longer optional in the modern world, this do-it-yourself manual was designed especially for those final remaining hold-outs who hate technology in general, and computers in particular. It takes the literary/artistic type through every single step required to obtain a basic-to-intermediate understanding of computers, with the emphasis on "understanding." And while the introduction is aimed at an older, and distinctly hostile and essentially captive audience of technology-averse first-time users, the lessons themselves would be suitable for anyone who wishes to advance with computers by gaining a conceptual

understanding of how they work. The manual is divided into 10 short lessons which presuppose absolutely no knowledge of computers. They are written in clear, conversational prose, and explain computers in the same manner that non-technical subjects are taught. When completed, the student will have acquired the ability to purchase a computer and internet service; set up a new computer; create and read a personalized daily newsfeed; shop and bank online; apply for online accounts, download and install apps; use the media player and transfer CDs to a computer and MP3 player; create and organize files and folders; use the internet to view art and access free, archival material; create and use internet email, Facebook, and personal and conference video accounts; edit digital images, and use a digital camera. It contains a 20-page glossary of terms for reference, and explains each term and technique in painstaking, standard-usage English instead of abbreviated, incomprehensible techno-speak.
