This course provides students with hands on training regarding the design, troubleshooting, modeling and evaluation of computer networks. In this course, students are going to experiment in a real test-bed networking environment, and learn about network design and troubleshooting topics and tools such as: Node Creation, Data Traffic, Mobile Node Position, Movement Generation, Traffic File Analysis, Protocol Comparision, Energy Model, Random Traffic Creation in NS - 2 Software . Student will also be introduced to the network modeling and simulation, and they will have the opportunity to build some simple networking models using the tool and perform simulations that will help them evaluate their design approaches and expected network performance. This book considers the importance of organizing knowledge processes to overcome geographical, time zone and cultural challenges found in global work. Providing tools to help readers find a balance between these processes it is a must read of practitioners, academics or students concerned with knowledge processes in globally distributed work. Historians have long debated whether the mid-nineteenth century American synagogue was transplanted from Central Europe or represented an indigenous phenomenon. Alternatives to Assimilation examines the Reform movement in American Judaism from 1840 to 1930 in an attempt to settle this issue. Alan Silverstein describes the emergence of organizational innovations such as youth groups, sisterhoods, brotherhoods, a professionalized rabbinate, a rabbinical college, and a national congregational body as evidence of Jews responding uniquely to American culture, in a fashion parallel to innovations in American Protestant churches. Silverstein places the developments he traces within the context of American religious and cultural history. He notes the shifting roles of American women, children, and ethnic groups as well as America's changing receptivity to trans-Atlantic cultural influences. He also utilizes census records, as well as congregational and national archives, in synthesizing a view of the Reform movement from its local temples and nationwide organizations. By offering a viable

response to American culture's rampant secularization and to its pressure on Jews to relinquish their distinctive traditions and commitments, the Reform movement also inspired emerging Conservative and Orthodox Jewish movements to offer their own constituents tangible institutional alternatives to assimilation. This book has been written for BE/B.Tech students of All University with latest syllabus for ECE, EEE, CSE, IT, Bio Medical, Mech, Civil Departments & also it is very useful for Diploma, Arts & Science Students.. The basic aim of this book is to provide a basic knowledge in Simulation and Analysis Laboratory Program for engineering students of degree, diploma & AMIE courses and a useful reference for these preparing for competitive examinations. All Experiments have excellent output results. All the concepts are explained in a simple, clear and complete manner to achieve progressive learning. Each Programs is well supported with the necessary illustration practical output explanations. Three years have passed since the second edition of this book was published. The field of IT outsourcing continues to grow in practice as well as in academia and draws further attention in both domains. Aspects of traditional outsourcing (Part II) have remained pronounced but are becoming more mature. While o- sourcing determinants are still important, they are now of less interest to researchers. Relationship management (Chap. 1) and capability management (Chap. 2) continue to be of interest; so too are outsourcing outcomes (Chap. 3) and, as a new focus, innovation aspects (Chap. 4). These are motivating more and more research activities, complementing the lifecycle of traditional o- sourcing. We note significant growth in the field of IT offshoring (Part II). In our third edition, we offer research results on offshoring patterns and trends (Chap. 5), the crucial aspect of knowledge sharing (Chap. 6), vibrant examples for offshoring dynamics (Chap. 7), and some new contributions on the deter- nants of offshoring success (Chap. 8). The last part of our book investigates the field of business process outsourcing (Part III). In this section, issues such as standardization, process outsourcing to India and deinstitutionalization patterns in the health-care sector are presented. Given these new subjects, we believe that Enduring Themes,

Global Challenges, and Process Opportunities is an appropriate subtitle for this third edition of the monograph. Again, we have thoughtfully compiled contem- rary outsourcing research as a primer and a platform for scientific discourse. Meditation Manual for Seekers Seekers of wisdom and enlightenment now have a manual like no other. The practices of meditation and Yoga are revealed from the most unapparent to the most apparent, from the subtlest sense of individuality, to the appearance of visible matter. The Meditation Manual for Seekers covers it all in 5 Parts. Part I encourages vigilance with the practices of Yoga and meditation. The Meditation Manual for Seekers will help you stay determined, patient, and confident. Part II discusses the 'lower self' and its parts. It requires 8 Critical Propositions to be understood so you can get the big picture at the outset. Pay close attention to the Propositions because they form the theory and practice of meditation. They introduce such concepts as the mind, I-sense, and their changing natures. The practical opportunity for enlightenment begins with them. Part III discusses the 'Higher Self' in terms of a changeless field of pure Consciousness and Transcendental Being. This ultimate human ability is contrasted with life in daily activity, and other phenomenal and transitory natures of life. Part IV presents the Meditation Practicum. Rarely, if ever, has there been a written step-by-step instruction that enables self-awareness. It is structured with techniques and a Q&A in an easy-to-understand format. Topics covered include settling down, restful alertness, thinking, using the mantra, going deep, being still, and a host of What-If scenarios on how to intensify the results of your practice, including the daily use of Yogic postures, breathing exercises, restraints and observances, prayer and invocation, sleep and rest, nutrition and exercise, and the reduction of daily stress. Basic Theory -- Easy to understand generalities, definitions, and settings for meditating with a mantra. Meditation Practice -- First, the procedure is walked-through conceptually, and then using an instant-by-instant protocol, you can reach the deepest and stillest experience. The Mantra Miniaturization Technique employs Yogic technologies to reduce distracting influences that prevent you from recognizing your subtlest individuality. Typical

Questions -- To insure against wasting valuable years in unproductive practice, What-If scenarios present and clarify procedures and experiences, such as meditating with physical pain, anxiety, or the influence of medicinal substances. Part V concludes the Meditation Manual for Seekers with several critical commentaries that examine the practice and practitioners of meditation, including custodians of spiritual wisdom, ascetic renunciation, and other approaches to help clarify their relationship to the practice of Yoga and meditation. This book contains the refereed proceedings of the 10th International Conference on Knowledge Management in Organizations, KMO 2015, held in Maribor, Slovenia, in August 2015. The theme of the conference was "Knowledge Management and Internet of Things." A continuation of the ongoing Oxford University's Centre for the Study of Values in Education and Business. The papers deal with the interactive effect of business and education as well as the moral and ethical concerns underpinning each. The proliferation of technology has affected all aspects of human life, yet the continuing possibilities of their effects on education have yet to be fully explored. When viewed separately, one may believe that only paltry solutions can be wrought from online and web-based education; however, when applied and studied in a dynamic, interactive sense, these advancements may alter the very notion of learning and education. Revolutionizing Education through Web-Based Instruction is a comprehensive, multi-disciplinary exploration of the emerging digital opportunities available to educators. This book presents contemporary theoretical frameworks as well as practical research findings that support the use of these new computer-assisted teaching techniques. The myriad of research-based topics featured in this book allow for a thorough, diverse discussion about education, technology, and the intersection therein. This title is an invaluable resource for instructors, students of education, and researchers and professionals in the fields of knowledge management. InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects. "This book provides a valuable resource for promoting current academic discourse on innovation in knowledge-intensive organizations and contexts"--

The design of knowledge systems is finding myriad applications from corporate databases to general decision support in areas as diverse as engineering, manufacturing and other industrial processes, medicine, business, and

economics. In engineering, for example, knowledge bases can be utilized for reliable electric power system operation. In medicine they support complex diagnoses, while in business they inform the process of strategic planning. Programmed securities trading and the defeat of chess champion Kasparov by IBM's Big Blue are two familiar examples of dedicated knowledge bases in combination with an expert system for decision-making. With volumes covering "Implementation," "Optimization," "Computer Techniques," and "Systems and Applications," this comprehensive set constitutes a unique reference source for students, practitioners, and researchers in computer science, engineering, and the broad range of applications areas for knowledge-based systems. Employees exit an organization with 80% of the knowledge they have acquired without transferring it to others. This colossal loss of intellectual assets is even more in terms of parent to child legacy transfer. Several factors may have contributed to this immense generational memory loss. First, the knowledge seekers do not know what to do on how to influence the knowledge sources to share their skills and experiences and may not even understand the characteristics

of the knowledge they intend to access from the knowledge sources. Second, these intellectual assets such as skills and experiences they intend to access give the knowledge sources their comparative advantage in the society and worst still, they are not on the pages of procedures or other documented format, but mainly domicile in the heads of the possessors and hence not visible to others. Third, people also regard their skills and experiences as invaluable intellectual assets and hence do not want to easily share it with others. These are some of the constraints knowledge seekers face, whether in an organization or the society while trying to access the information they require in creating value in their respective domains. Eventually, the legacies transferred to the knowledge seekers fall short of what would have been transferred if the knowledge seeker knows otherwise. This book bridges this gap by providing a strategic and systematic approach on how a knowledge seeker may apply social interaction variables and its hierarchical effect on knowledge transfer to influence a knowledge source to share his or her intellectual assets that he or she might not ordinarily be willing to share with any knowledge seeker. This book constitutes the joint refereed proceedings of nine international workshops held as part of OTM 2005 in Agia Napa, Cyprus in October/November 2005. The 145 revised full papers presented were carefully reviewed and selected from a total of 268 submissions. Topics addressed are agents, Web services and ontologies merging (AWeSOMe 2005), context-aware mobile systems (CAMS 2005), grid computing and its application to data analysis (GADA 2005), inter-organizational systems and interoperability of enterprise software and applications (MIOS+INTEROP 2005), object-role modeling (ORM 2005), a PHD symposium (PhDS 2005), semantic-based geographical information systems (SeBGIS 2005), Web semantics (SWWS 2005), and ontologies, semantics and e-learning (WOSE 2005). We are in a global transition in all areas and aspects of our lives. The necessary adjustments are required to allow the alignment in harmony with the current changes. Are you ready? The Manual For Humanity Thriving In The New Earth contains essential wisdom for the current new phase of our human evolution and transition we are living in. What and why is

happening in our new reality is thoroughly explained, and how we can adjust to align and benefit from these monumental changes and times, designed for our acceleration. Mother Earth's frequency has changed, and it is accelerating rapidly. The higher frequencies of light are available to humanity and all beings. There is a need for adjustments to our belief system and physical, mental, emotional, and spiritual bodies to be aligned and in harmony with the current global alteration of consciousness. Together with all planets, stars, galaxies, and universes, we are on the acceleration path. It is a process of rebirth and reconstruction for all. Exactly the evolution happens through a shift from solely the mind to the heart-based consciousness and awareness moment to moment. This is when we are liberated and in alignment with the parameters of this new reality. It is evident, our evolution collectively and individually depends on how much love we have in our hearts towards others and our selves. Our lighter and brighter frequency is a product of the heart center awareness moment to moment in this new realm. The fact is everything we need to evolve is already within us. 'The Manual For Humanity Thriving In The New Earth' contains knowledge, wisdom, and practices to assist the process of our up leveling and unification within and with the outer world. Together, we are mastering the physical life through this manual, when the higher state of consciousness and awareness happen naturally. Let us join hearts and souls together through wisdom, understanding, and cooperation in creating a better world and our new reality to be an opportunity for all. The Knowledge Seeker is a useful system to develop various intelligent applications such as ontology-based search engine, ontology-based text classification system, ontological agent system, and semantic web system etc. The Knowledge Seeker contains four different ontological components. First, it defines the knowledge representation model iV Ontology Graph. Second, an ontology learning process that based on chi-square statistics is proposed for automatic learning an Ontology Graph from texts for different domains. Third, it defines an ontology generation method that transforms the learning outcome to the Ontology Graph format for machine processing and also can be visualized for human validation. Fourth, it defines different ontological operations (such as similarity measurement and text classification) that can be carried out with the use of generated Ontology Graphs. The final goal of the KnowledgeSeeker system framework is that it can improve the traditional information system with higher efficiency. In particular, it can increase the accuracy of a text classification system, and also enhance the search intelligence in a search engine. This can be done by enhancing the system with machine processable ontology. This volume explores the relation between ethics and spirituality in Islam through an examination of the genres of Sufi adab, including manuals and hagiographical accounts, from the formative period of Sufism until modernity.
