Harry Hopper's new gift becomes so productive that he must begin a new business venture. *Landscape Architecture Regenerative Design for Sustainable Development* Winner, 1994 Merit Award for Communications, American Society of Landscape Architects "Regenerative Design for Sustainable Development is nothing less than a user's manual for planet Earth that integrates the principles of ecological design with practical realities better than anything I've read. John Lyle has written the best book now available on the theory and practice of sustainability . . . essential reading for natural resource professionals, architects, planners, educators, environmentalists, and the general public." --David W. Orr, Professor and Chair Environmental Studies Program, Oberlin College. "John Lyle has written a splendid book, *Regenerative Design for Sustainable Development*. It is perfectly topical; it is committed to the unity of art and science, design and planning, man and nature. It is itself exemplary, and it is a repository of exemplary adaptations. It has carried the environmental movement to a new threshold of ecological planning and design. It should be widely read and employed." --Ian L. McHarg, FASLA. "In these times of widespread urban stress and regional disruption, the cogent thoughts of John Tillman Lyle on sustainable cities are on target and highly constructive. They are must reading for planning professionals and all concerned citizens." --John Ormsbee Simonds, FASLA. "More designers need to broaden their horizons in the way John Lyle has put forth in this book. In general, there are far too few land planners, landscape architects, or architects who have any working procedure that approximates what sustainable design entails. This book provides important historical background and contemporary experience to help guide the way." --Pliny Fisk III, Center for Maximum Potential Building Systems. From the despoliation of our rivers and lakes by industrial runoff to the destruction of our atmosphere by sulphur emissions and CFCs, production cycles based on a one-way flow of materials and energy have pushed us to the brink of environmental collapse. It is time for a change, and in this groundbreaking book, John Tillman Lyle offers us a blueprint for implementing that change. This book provides civil engineers, architects, land development planners, and others with practical, realistic approaches to reversing this deadly course. Throughout, the emphasis is on proven regenerative practices for water use, land use, energy use, and building design. Most importantly, it provides ways to reestablish connections between people and nature, between art and science, and between technology and daily life. The creative application of appropriation and remix are now common across creative disciplines due to the ongoing recycling and repurposing of content and form. Consequently basic elements which were previously exclusive to postproduction for editing image, sound and text, are now part of daily communication. This in turn pushes art and design to reconsider their creative methodologies. Author Eduardo Navas divides his book into three parts: Media Production, Metaproduction, and Postproduction. The chapters that comprise the three parts each include an introduction, goals for guidelines of a studio-based project, which are complemented with an explanation of relevant history, as well as examples and case studies. Each set of guidelines is open-ended, enabling the reader to repurpose the instructional material according to their own methodologies and choice of medium. Navas also provides historical and theoretical context to encourage critical reflection on the effects of remix in the production of art and design. *Art, Media Design, and Postproduction: Open Guidelines on Appropriation and Remix* is the first book of guidelines to take into account the historical, theoretical, and practical context of remix as an interdisciplinary act. It is an essential read for those interested in remix studies and appropriation in art, design and media. Contains more than six hundred circle time and group activities designed by teachers to use with children three to six years old, each including a suggested age, a list of materials, and step-by-step directions, and features lists of related books, songs, and poems.
