Born in Concrete Jun 21 2020 After a 12 year absence from creating his own art, Derek started to focus on his personal work in 2009. His first personal project, Born in Concrete, was undertaken to dispel his biases towards expressive art, overcome his own perceived limitations and to rejuvenate his creative spirit. This collision of Soviet inspired retro sci-fi and Jewish mystical and qabalistic symbolism has evolved into a filter, or framework, that emotions, ideas and images are pushed through to be given shape and form. This project has been well received, being featured in numerous exhibits, international publications, as well as book and album covers, It continues to unfold and expand.... This book will feature a gallery section of artwork, a chapter on the artwork created for use as graphics on snowboards, the snowboards and the corresponding marketing material as well as a chapter on the creation of a resin model kit by Industria Mechanika. A section of the book will also be dedicated to a step-by-step

breakdown of how one of the art pieces was created.

Communication and Democratic Reform in South Africa Sep 24 2020 The book examines the reform of the communication sector in South Africa as a detailed and extended case study in political transformation - the transition from apartheid to democracy. The reform of broadcasting, telecommunications, the state information agency and the print press from apartheid-aligned apparatuses to accountable democratic institutions took place via a complex political process in which civil society activism, embodying a post-social

democratic ideal, largely won out over the powerful forces of formal market capitalism and older models of state control. In the cautious acceptance of the market, the civil society organizations sought to use the dynamism of the market while thwarting its inevitable inequities. Forged in the crucible of a difficult transition to democracy, communication reform in South Africa was navigated between the National Party's embrace of the market and the African National Congress leadership's default statist orientation.

Resilient Cities Jun 02 2021 Half of the world ' s inhabitants now live in cities. In the next twenty years, the number of urban dwellers will swell to an estimated five billion people. With their inefficient transportation systems and poorly designed buildings, many cities—especially in the United States—consume enormous quantities of fossil fuels and emit high levels of greenhouse gases. But our planet

is rapidly running out of the carbon-based fuels that have powered urban growth for centuries and we seem to be unable to curb our greenhouse gas emissions. Are the world's cities headed for inevitable collapse? The authors of this spirited book don't believe that oblivion is necessarily the destiny of urban areas. Instead, they believe that intelligent planning and visionary leadership can help cities meet the impending crises, and look to existing initiatives in cities around the world. Rather than responding with fear (as a legion of doomsaying prognosticators have done), they choose hope. First, they confront the problems, describing where we stand today in our use of oil and our contribution to climate change. They then present four possible outcomes for cities: "collapse," "ruralized," "divided," and "resilient." In response to their scenarios, they articulate how a new "sustainable urbanism" could replace today's "carbon-consuming urbanism." They address in detail how new transportation systems and buildings can be feasibly developed to replace our present low efficiency systems. In conclusion, they offer ten "strategic steps" that any city can take toward greater sustainability and resilience. This is not a book filled with "blue sky" theory (although blue skies will be a welcome result of its recommendations). Rather, it is packed with practical ideas, some of which are already working in cities today. It frankly admits that our cities have problems that will worsen if they are not addressed, but it suggests that these problems are solvable. And the time to begin solving them is now.
