Communities Entrepreneurship, Community, and Community Development

This timely Research Handbook offers new ways in which to navigate the diverse terrain of community development research. Chapters unpack the foundations and history of community development research and also look to its future, exploring innovative frameworks for conceptualizing community development. Comprehensive and unequivocally progressive, this is key reading for social and public policy researchers in need of an understanding of the current trends in community development research, as well as practitioners and policymakers working on urban, rural and regional development. This practical guide shows you what really does (and doesn't) contribute to community building success. It reveals 28 keys to help you build community more effectively and efficiently. You won't find another single report that pulls out common lessons from across community building initiatives about what works. You can use this report to find out what community characteristics contribute to successful community building, make sure key processes such as communications and technical assistance are in place, determine if community leaders or organizers have essential qualities such as a relationship of trust and flexibility, and evaluate the likely success of a proposed project or get a struggling effort back on track. Examples, definitions, and a detailed bibliography make this report even more valuable. Wilder Research Center scoured the literature, contacted resource centers, and spoke with community development experts across the country. The result is concrete, understandable research based on real-life experiences. The 28 factors in this report are grouped by: 1) characteristics of the community, 2) characteristics of the community building process, and 3) characteristics of community

building organizers. Detailed descriptions and case examples of how each factor plays out are followed by practical questions you can use to assess your work. In addition to the factors, you also get working definitions for community, community building, and many other terms; a list of resources and contacts in the field; an explanation of how the research was done; and a complete bibliography of all the studies used in this report. Now you can save time looking for best-practice information. With this concise report, you've got the tools to help your community building work succeed! This book presents and analyses interesting recent developments in the field of community capacity building, in a variety of OECD and non-OECD countries. The focus is on how CCB has effected change in three major areas: social policy, local economic policy and environmental policy. As communities face new social and economic challenges as well as political changes, the responsibilities for social services, housing needs, and welfare programs are being placed at the local government level. But can community-based organizations address these concerns effectively? The editors and contributors to *Mobilizing Communities* explore how these organizations are responding to these challenges, and how asset-based development efforts can be successful. A lack of entrepreneurial capacity, limited understanding of tourism markets and a lack of community understanding of tourism and its impacts have been identified as barriers to effective tourism development in peripheral regions. This book provides an analysis of this issue within tourism development practice. *Community Development for Social Change* provides a comprehensive introduction to the theory and practice of community development and associated activities, discusses best practice from global experience and links that to the UK context. The book integrates the realities of practice to key underpinning theories, human rights, values and a commitment to

promoting social justice. A range of practice models are described and analysed, including UK models, popular education and community organising, as well as a range of practice issues that need to be understood by community development workers. For example, strategies to promote individual and community empowerment, challenging discrimination, building and sustaining groups, and critical reflection on practice. Finally, a range of case studies from the UK and overseas illustrates good practice in diverse contexts. These case studies are analysed with reference to the values of community development, the promotion of social justice and the underpinning theories. It is an essential text for those on community development courses as well as for a range of workers, including local government, national and local voluntary agencies, and community-based organisations. This resource provides the post-disaster legal and regulatory framework, important lessons learned from prior disasters, and tools to foster the recovery of affordable housing and community economic development. Practitioners seeking recommendations for future disaster recovery efforts will find the case studies of natural and human-made disasters and the resources section particularly helpful. Gordon Chin, nationally recognized community leader and activist, tells the compelling story of the rise of civic and political power in San Francisco's Chinatown from the 1960s through the election of a Chinese American mayor in 2011. This grass roots community leadership has made San Francisco Chinatown a model for community development across the country. The narrative covers the birth of Asian American activism and how, despite natural disasters, civic neglect, and racism, it spearheaded affordable housing, open space, accessible transportation, and effective community and youth leadership. The Chinatown Community Development Center, which Chin founded and led for three decades, fought evictions from the

International Hotel, organized the Ping Yuen rent strike, and convinced the city to extend the Central Subway to Chinatown, among other accomplishments that have significantly shaped life in San Francisco. This is a firsthand view on how to produce meaningful and positive social change. ABOUT THE AUTHOR Gordon Chin is the former Executive Director of San Francisco's Chinatown Community Development Center, which he co-founded and ran for thirty-four years before retiring in October 2011. Recognized nationally as a leader in community development and affordable housing, and as a pioneering Asian American activist, he led Chinatown CDC in developing thousands of units of affordable housing for low-income seniors, working families, and formerly homeless residents. From the beginning of the Asian American Movement in the turbulent 1960s, he has devoted himself to building community, organizing tenants and immigrant families, and developing youth leaders. Mr. Chin lives in San Francisco, where he continues to be involved in community issues and is an avid Giants fan. PRAISE FOR THE BOOK "Community activist, housing developer, policy and land-use guru, commissioner and collaborative leader-this is what Gordon Chin has meant to our City and the Chinese Asian communities he has served and advocated for. He has a lot to say about our City's history for the past fifty-five-plus years, and I am grateful he has put it into words for all of us to appreciate." -Ed Lee, Mayor of San Francisco "Gordon Chin is one those movers and shakers who has made San Francisco worth living in. His fight to keep the city's legendary Chinatown a vibrant and affordable community is a model for righteous activism. Now we need a new generation of bravehearts, young men and women willing to fight to save wonderfully multi-dimensional cities like San Francisco so they don't become a jeweled preserve of the one percent. Building Community, Chinatown Style is full of crucial lessons for the

next generation of urban warriors and dreamers- and for those of us old ones who still haven't given up. Read and learn-and get inspired."

-David Talbot, author of *Season of the Witch: Enchantment, Terror and Deliverance in the City of Love* Interrogates the idea of capacity building theoretically and explores the variety of meanings, constructions and practices of capacity building. This book examines capacity building in both developing and developed countries and takes the position that fragile communities are present in all societies. The field of Affordable Housing and Community Economic Development in the United States has evolved since the 1960s. It has become a solid and complex industry. *Building Healthy Communities: A Guide to Community Economic Development for Advocates, Lawyers and Policymakers* documents the themes and trends of the contemporary CED movement and provides guidance for strengthening our communities and ensuring that they and their residents prosper in today's global economy. . "Finally a book that contextualizes community and neighborhood development and planning in a progressive but realist fashion. Peterman provides community and neighborhood planners with preassessment criteria and a methodological tool-kit to help ensure future success. This book is invaluable to neighborhood and community development planning courses and will provide a useful adjunct to social planning and social work courses." --Mickey Lauria, University of New Orleans "Bill Peterman has written a passionate treatise on neighborhood planning tempered by more than 20 years of front line experience. The result is a powerful praxis that can guide planners, community activists, and theoreticians who are concerned with making community-building a reality." --Barbara Ferman, Professor of Political Science, Temple University "Bill Peterman's critical analysis of the strengths and weaknesses of America's expanding community development

movement should be required reading for all community activists, urban planners, policy analysts and municipal officials! Peterman's rich insights and thoughtful recommendations regarding how community-based planning and development can lead to a broader popular movement for greater social equality deserve the immediate attention of all those concerned about the future of U. S. cities."

--Kenneth M. Reardon, Associate Professor in Urban and Regional Planning, University of Illinois at Urbana-Champaign " Bill Peterman offers important insights from his long experience in Chicago on neighborhood planning and community-based development. His case studies offer very useful lessons on success and failure. This is a valuable addition to the literature on urban neighborhoods." --W. Dennis Keating Professor and Associate Dean College of Urban Affairs, Cleveland State University This book explores the promise and limits of bottom-up, grass-roots strategies of community organizing, development, and planning as blueprints for successful revitalization and maintenance of urban neighborhoods. Peterman proposes conditions that need to be met for bottom-up strategies to succeed. Successful neighborhood development depends not only on local actions, but also on the ability of local groups to marshal resources and political will at levels above that of the neighborhood itself. While he supports community-based initiatives, he argues that there are limits to what can be accomplished exclusively at the grass-roots level, where most efforts fail. *Neighborhood Planning and Community-Based Development* should be of special interest to individuals who are directly involved in neighborhood planning and development activities. With case studies that include the issues of gentrification, public housing, government-sponsored development of sports facilities, housing management control and racial diversity, the book takes a look at accomplishing successful neighborhood-based

planning and development. *Interdisciplinary Community Development: International Perspectives* is a unique look at the innovations in interdisciplinary community development around the world. International leaders in geography, public policy, administration, social work, education, and public health explore the latest research, programs, and approaches to promote strategies A comprehensive approach focused on sustainable change *Asset Building and Community Development, Fourth Edition* examines the promise and limits of community development by showing students and practitioners how asset-based developments can improve the sustainability and quality of life. Authors Gary Paul Green and Anna Haines provide an engaging, thought-provoking, and comprehensive approach to asset building by focusing on the role of different forms of community capital in the development process. Updated throughout, this edition explores how communities are building on their key assets—physical, human, social, financial, environmental, political, and cultural capital—to generate positive change. With a focus on community outcomes, the authors illustrate how development controlled by community-based organizations provides a better match between assets and the needs of the community. Drawing on international examples, this book interrogates the relationship between the arts, culture and community development. Contributors from six continents, reimagine community development as they consider how aesthetic arts contribute to processes of peacebuilding, youth empowerment, participatory planning and environmental regeneration. A person doesn't have to be a consensus organizer to think like one. *Consensus Organizing: A Community Development Workbook—A Comprehensive Guide to Designing, Implementing, and Evaluating Community Change Initiatives* helps students and practitioners begin to think like consensus organizers and incorporate

this way of strategic thinking into their lives and their work. Through a wide range of exercises, role-play activities, case scenarios, and discussion questions, this workbook presents the conceptual framework for consensus organizing and provides a practical and experiential approach to understanding and applying consensus organizing to address a range of issues. This workbook is designed to be used by itself or along with Mike Eichler's text *Consensus Organizing: Building Communities of Mutual Self Interest* (SAGE, 2007). Accompanying Website Instructors and students have access to the many activities and cases on the accompanying website at www.sagepub.com/ohmerworkbookstudy. Beginning with the foundations of community development, *An Introduction to Community Development* offers a comprehensive and practical approach to planning for communities. Road-tested in the authors' own teaching, and through the training they provide for practicing planners, it enables students to begin making connections between academic study and practical know-how from both private and public sector contexts. *An Introduction to Community Development* shows how planners can utilize local economic interests and integrate finance and marketing considerations into their strategy. Most importantly, the book is strongly focused on outcomes, encouraging students to ask: what is best practice when it comes to planning for communities, and how do we accurately measure the results of planning practice? This newly revised and updated edition includes: increased coverage of sustainability issues, discussion of localism and its relation to community development, quality of life, community well-being and public health considerations, and content on local food systems. Each chapter provides a range of reading materials for the student, supplemented with text boxes, a chapter outline, keywords, and reference lists, and new skills based exercises at the end of each

chapter to help students turn their learning into action, making this the most user-friendly text for community development now available. Ordinary people, community leaders, and even organizations and corporations still do not fully comprehend the interconnected, “big picture” dynamics of sustainability theory and action. In exploring means to become more sustainable, individuals and groups need a reference in which to frame discussions so they will be relevant, educational, and successful when implemented. This book puts ideas on sustainable communities into a conceptual framework that will promote striking, transformational effects on decision-making. In this book practitioners and community leaders will find effective, comprehensive tools and resources at their finger-tips to facilitate sustainable community development (SCD). The book content examines a diverse range of SCD methods; assessing community needs and resources; creating community visions; promoting stakeholder interest and participation; analyzing community problems; designing and facilitating strategic planning; carrying out interventions to improve

While libraries deliver a vital public service within diverse communities, they are often invisible in the community development process initiated by civic planners, activists, and local government officials. Award-winning librarian, educator, author, and activist, Kathleen de la Pena McCook challenges librarians everywhere to get involved early by demanding a place at the community planning and development table. Describing the experiences and insights of librarians who have blazed trails of community involvement and development around the country, McCook outlines practical ways to:

- Become involved in policy making early and build a grassroots campaign;
- Connect with powerful partners in the community visioning process;
- Promote the tangible strengths and assets of the library.

Asset Building and Community Development examines the promise and

limits of community development and explores how communities are building on their key assets and capital. Introduction to Community Development provides students of community and economic development with a theoretical and practical introduction to the field of community development. Bringing together leading scholars in the field of community development, the book follows the curriculum needs in offering a progression from theory to practice, beginning with a theoretical overview, an historical overview, and the various approaches to community development. Providing new insight into an important community development challenge, this text looks at how to stimulate the formation of community-based organizations and effective citizen action in neighbourhoods. "'Investing in What Works for America's Communities' is a new book that calls on leaders from the public, private, and nonprofit sectors to build on what we know is working to move the needle on poverty. The book's impressive list of authors represents a broad range of sectors including federal agencies, philanthropy, housing academia, health, and the private sector. This collection of essays provides dozens of innovative ideas that can bring new opportunities to America's struggling communities. It calls on leaders, from the public, private, and nonprofit sectors to recognize that they can work smarter and achieve more by working together." --Book website. International Community Development Practice provides readers with practice-based examples of good community development, demonstrating its value for strengthening people power and improving the effectiveness of development agencies, whether these be governmental, non-governmental or private sector. The chapters focus upon the making of the community development profession and the eight core competences required of the professional practitioner, as outlined by the International Association for Community Development (IACD), whatever their job

title or host agency, in order to be able to undertake community development. These are concerned with the ability of the practitioner to: Put ethics and values into practice Engage with communities Ensure participatory planning Organize for change Support learning for change Promote diversity and inclusion Build leadership and infrastructure Develop and improve policy and practice

From a policy perspective, the book will reassert the role of community development approaches as related to a wide variety of global challenges, including poverty amelioration, climate change, human rights, peace building and social, environmental, political and economic development. From a practice perspective, the book will reassert the importance of high levels of professional competence building upon decades of experience in the field around the world by development practitioners working in community work, social work, health, adult education, environmental protection, local economic development, urban design, cultural work and other disciplines concerned to support effective community development. While entrepreneurship is widely cited as playing a key role in economic development, job creation, and advances in well-being in capitalist nations, there has been an overwhelming focus on the firm, firm founders, and founders' strategies and decision-making processes. Only more recently, the important link between communities and entrepreneurs has emerged as a new frontier in entrepreneurship research. This book brings the emerging nexus between community and entrepreneur to light by exploring the mutual impact that communities and entrepreneurs have on one another. It focuses on how entrepreneurship development can push beyond the traditional emphasis on economic growth: from enriching the local lifestyle to building self-sufficiency; from attracting new markets to rediscovering traditional work; from the highest tech enterprises to the most ancient crafts and trades. The

authors cover a wide variety of topics including rural community entrepreneurship development and culture, innovation and regional development, community-based enterprise learning, and urban revitalization strategies. This book was originally published as a special issue of the journal *Community Development*. Community social work practice based on a capacity enhancement model offers tremendous potential for unifying communities consisting of groups from very different cultural backgrounds, and in the process of doing so, make physical changes in the community. *Community Social Work Practice in An Urban Context* aims to teach graduate students with an emphasis on community and urban social work how to create positive community environments in marginalized urban-based communities. The use of murals, gardens, playgrounds, and sculptures, for example provide social workers with an opportunity to identify, engage, and plan services with communities. These projects, in turn, are based upon a community's strengths and represent an effort at developing a community's capacity to help itself with assistance from professionals. This book focuses on a gap in current social work practice theory: community change. Much work in this area of macro practice, particularly around "grassroots" community organizing, has a somewhat dated feel to it, is highly ideological in orientation, or suffers from superficiality, particularly in the area of theory and practical application. Set against the context of an often narrowly constructed "clinical" emphasis on practice education, coupled with social work's own current rendering of "scientific management," community practice often takes second or third billing in many professional curricula despite its deep roots in the overall field of social welfare. Drawing on extensive case study data from three significant community-building initiatives, program data from numerous other community capacity-building efforts, key informant

interviews, and an excellent literature review, Chaskin and his colleagues draw implications for crafting community change strategies as well as for creating and sustaining the organizational infrastructure necessary to support them. The authors bring to bear the perspectives of a variety of professional disciplines including sociology, urban planning, psychology, and social work. *Building Community Capacity* takes a collaborative, interdisciplinary approach to a subject of wide and current concern: the role of neighborhood and community structures in the delivery of human services or, as the authors put it, "a place where programs and problems can be fitted together." Social work scholars and students of community practice seeking new conceptual frameworks and insights from research to inform novel community interventions will find much of value in *Building Community Capacity*. Building on the lessons of early labor leaders, civil rights volunteers, and political activists, Jim Diers has developed his own models and successful strategies for community development. *Neighbor Power* chronicles his involvement with Seattle's communities. This book not only gives hope that participatory democracy is possible, but it offers practical applications and invaluable lessons for ordinary, caring citizens who want to make a difference. It also provides government officials with inspiring stories and proven programs to help them embrace citizen activists as true partners. Diers's experience is extensive. He began as a community organizer in 1976, then moved on to help establish and staff a system of consumer-elected medical center councils. This led him to Seattle city government, where he served under three mayors as the first director of the Department of Neighborhoods, recognized as the national leader in such efforts. In the 1990s, Jim Diers helped Seattle neighborhoods face challenges ranging from gang violence to urban growth. The Neighborhood Matching Fund grew to support over 400

community self-help projects each year while a community-driven planning process involved 30,000 people. Diers provides evidence that productive community life is thriving, not just in Seattle, Washington, but in towns and cities across the globe. Both practical and inspiring, *Neighbor Power* offers real-life examples of how to build active, creative neighborhoods and enjoy the rich results of community empowerment. The *Community Development Reader* is the first comprehensive reader in the past thirty years that brings together practice, theory and critique concerning communities as sites of social change. With chapters written by some of the leading scholars and practitioners in the field, the book presents a diverse set of perspectives on community development. These selections inform the reader about established and emerging community development institutions and practices as well as the main debates in the field. The second edition is significantly updated and expanded to include a section on globalization as well as new chapters on the foreclosure crisis, and emerging forms of community . Our current food system has decimated rural communities and confined the choices of urban consumers. Even while America continues to ramp up farm production to astounding levels, net farm income is now lower than at the onset of the Great Depression, and one out of every eight Americans faces hunger. But a healthier and more equitable food system is possible. In *Building Community Food Webs*, Ken Meter shows how grassroots food and farming leaders across the U.S. are tackling these challenges by constructing civic networks. Overturning extractive economic structures, these inspired leaders are engaging low-income residents, farmers, and local organizations in their quest to build stronger communities. Community food webs strive to build health, wealth, capacity, and connection. Their essential element is building greater respect and mutual trust, so community members can

more effectively empower themselves and address local challenges. Farmers and researchers may convene to improve farming practices collaboratively. Health clinics help clients grow food for themselves and attain better health. Food banks engage their customers to challenge the root causes of poverty. Municipalities invest large sums to protect farmland from development. Developers forge links among local businesses to strengthen economic trade. Leaders in communities marginalized by our current food system are charting a new path forward. *Building Community Food Webs* captures the essence of these efforts, underway in diverse places including Montana, Hawai'i, Vermont, Arizona, Colorado, Indiana, and Minnesota. Addressing challenges as well as opportunities, *Meter* offers pragmatic insights for community food leaders and other grassroots activists alike. This book explains in plain terms how developers and planners can involve the community in the development process using the latest community engagement tools. It describes why, in these days of more complex projects and development approval procedures, it pays to win citizen support rather than fight opposition. This Handbook is a critical resource for carefully considering the possibilities and challenges of strategically integrating participatory action research (PAR) and community development (CD). Utilizing practical examples from diverse contexts across five continents, it looks at how communities are empowering themselves and bringing about systemic change. Chapters provide models for sustainably integrating the two practices and explore the transformative potential of decolonizing innovations and incorporating community organizing. With contributions by leading scholars and practitioners from the global south and north, the Handbook explores ways to build infrastructure to bring PAR and CD together, how to use PAR and CD to build people's power and capacity, and how to

integrate PAR and CD in relation to community and organizational capacity building. It further gives practical advice and academic analysis on youth PAR, how to use PAR and CD in crisis situations such as earthquakes and pandemics, and envisions radically alternative PAR and CD approaches. This is a timely resource for social science scholars looking to better understand PAR as an important research method. It rethinks the theories underpinning both PAR and CD, offering important lessons for community development practitioners and non-profit professionals, as well as higher education professors interested in community engagement. Using stories and exercises from grassroots organizing experience ... [this book] walks you through the steps of starting a new group or strengthening an old one - to build a better world.-Back cover. " We need our neighbors and community to stay healthy, produce jobs, raise our children, and care for those on the margin. Institutions and professional services have reached their limit of their ability to help us. The consumer society tells us that we are insufficient and that we must purchase what we need from specialists and systems outside the community. We have become consumers and clients, not citizens and neighbors. John McKnight and Peter Block show that we have the capacity to find real and sustainable satisfaction right in our neighborhood and community. This book reports on voluntary, self-organizing structures that focus on gifts and value hospitality, the welcoming of strangers. It shows how to reweave our social fabric, especially in our neighborhoods. In this way we collectively have enough to create a future that works for all. "
