*Carlos Hidalgo provides a clear roadmap and framework on how B2B organizations can implement change management and transform their Demand Generation. Case studies and excerpts from B2B marketing practitioners and ANNUITAS clients who have transformed their organizations and how they accomplished this change are incorporated throughout the book. This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. The structure and regulation of consumption and demand has recently become of great interest to sociologists and economists alike, and at the same time there is growing interest in trying to understand the patterns and drivers of technological innovation. This book brings together a range of sociologists and economists to study the role of demand and consumption in the innovative process. The book starts with a broad conceptual overview of ways that the sociological and economics literatures address issues of innovation, demand and consumption. It goes on to offer different approaches to the economics of demand and*

*innovation through an evolutionary framework, before reviewing how consumption fits into evolutionary models of economic development. Food consumption is then looked at as an example of innovation by demand, including an examination of the dynamic nature of socially-constituted consumption routines. The book includes a number of illuminating case studies, including an analysis of how black Americans use consumption to express collective identity, and a number of demand–innovation relationships within matrices or chains of producers and users or other actors, including service industries such as security, and the environmental performance of companies. The involvement of consumers in innovation is looked at, including an analysis of how consumer needs may be incorporated in the design of high-tech products. The final chapter argues for the need to build an economic sociology of demand that goes from micro-individual through to macro-structural features. Healthcare systems worldwide are swamped with demand, short of resources, and ill-equipped to respond to global health crises like COVID-19. This book is a guide for reforming healthcare delivery. The way we organize care matters, and the people best positioned to drive this are the clinicians who deliver care. The book offers a framework for transforming healthcare delivery that covers operational design, change management, long-term learning, and organizational environment. It describes the work of leading local operational change; identifies key decisions to be made, actions to be taken, and factors that must be taken into account; and gives clinicians*

*the tools and perspectives they need to lead change. The challenge of modern healthcare is to develop better organizations capable of delivering compassionate and individualized care on a grand scale while preserving the personal relationship between clinician and patient and the quality of care at the ward, operating room, clinic, or practice. Informed by extensive research and experience with systems all over the world, Richard Bohmer shows how organizations may transform by deploying a new workforce of clinical change leaders and how clinicians can take greater control over their own working environments. The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.*

*This book is a quarterly forecast and analysis report on the Chinese economy. It is published twice a year and presents ongoing results from the “China Quarterly Macroeconomic Model (CQMM),” a research project at the Center for Macroeconomic Research (CMR) at Xiamen University. Based on the CQMM model, the research team forecast major macroeconomic indicators for the next 8 quarters, including the rate of GDP growth, the CPI, fixed-asset investment, resident consumption and foreign trade. At the same time it focuses on simulation of current macroeconomic policies in China. In addition to helping readers understand China’s economic trend and policy guide, this book has three main goals: to help readers understand China’s economic performance; to forecast the main macroeconomic indicators for the next 8 quarters; and to simulate the effectiveness of macroeconomic policies.*

*Addressing the big questions about how technological change is transforming economies and societies Rapid technological change—likely to accelerate as a consequence of the COVID-19 pandemic—is reshaping economies and how they grow. But change also causes disruption, creates winners and losers, and produces social stress. This book examines the challenges of digital transformation and suggests how creative policies can make it more productive and inclusive. Shifting Paradigms is the second book on technological change produced by a joint research project of the Brookings Institution and the Korea Development Institute. Contributors are experts from the United States, Europe, and Korea. The first volume, Growth in a Time*

*of Change, was published by Brookings in February 2020. The book's underlying thesis is that the future is arriving faster than expected. Long-accepted paradigms about economic growth are changing as digital technologies transform markets and nearly every aspect of business and work. Change will only intensify with advances in artificial intelligence and other innovations. Investors, business leaders, workers, and public officials face many questions. Is rising market concentration inevitable with the new technologies or can their benefits be more widely shared? How can the promise of FinTech be captured while managing risks? Should workers fear the new automation? Are technology-driven shifts in business and work causing income inequality to rise? How should public policy respond? Shifting Paradigms addresses these questions in an engaging manner for anyone interested in understanding how the economic and social agenda is being transformed by today's winds of change.*

*Telecommunications Demand in Theory and Practice, which builds upon the author's seminal 1980 book, Telecommunications Demand: A Review and Critique, provides comprehensive analyses of the determinants and structure of telecommunications demands in the United States and Canada. Theory and empirical application receive equal emphasis with a heavy focus on the developments and econometric research since the divestiture of AT&T in 1984. For the first time, a detailed theoretical analysis of business telecommunications demand on subscriber and usage consumption externalities is presented.*

*Telecommunications Demand in Theory and Practice is without*

*peer in the documentation and analysis of price elasticities of demand for telecommunications services. This new book also includes a comprehensive bibliography with over 500 entries related to telecommunications demand and pricing.*

*Telecommunications Demand will appeal to both academic and consulting economists, telecommunications industry analysts and regulators, and to teachers of courses in applied econometrics and regulated industries. Build a continuously learning and adapting organization that can extract increasing levels of business, customer and operational value from the amalgamation of data and advanced analytics such as AI and Machine Learning Key Features Master the Big Data Business Model Maturity Index methodology to transition to a value-driven organizational mindset Acquire implementable knowledge on digital transformation through 8 practical laws Explore the economics behind digital assets (data and analytics) that appreciate in value when constructed and deployed correctly Book Description In today's digital era, every organization has data, but just possessing enormous amounts of data is not a sufficient market discriminator. The Economics of Data, Analytics, and Digital Transformation aims to provide actionable insights into the real market discriminators, including an organization's data-fueled analytics products that inspire innovation, deliver insights, help make practical decisions, generate value, and produce mission success for the enterprise. The book begins by first building your mindset to be value-driven and introducing the Big Data Business Model Maturity Index, its*

*maturity index phases, and how to navigate the index. You will explore value engineering, where you will learn how to identify key business initiatives, stakeholders, advanced analytics, data sources, and instrumentation strategies that are essential to data science success. The book will help you accelerate and optimize your company's operations through AI and machine learning. By the end of the book, you will have the tools and techniques to drive your organization's digital transformation. Here are a few words from Dr. Kirk Borne, Data Scientist and Executive Advisor at Booz Allen Hamilton, about the book: Data analytics should first and foremost be about action and value.*

*Consequently, the great value of this book is that it seeks to be actionable. It offers a dynamic progression of purpose-driven ignition points that you can act upon. What you will learn*  
*Train your organization to transition from being data-driven to being value-driven*  
*Navigate and master the big data business model maturity index*  
*Learn a methodology for determining the economic value of your data and analytics*  
*Understand how AI and machine learning can create analytics assets that appreciate in value the more that they are used*  
*Become aware of digital transformation misconceptions and pitfalls*  
*Create empowered and dynamic teams that fuel your organization's digital transformation*  
*Who this book is for* This book is designed to benefit everyone from students who aspire to study the economic fundamentals behind data and digital transformation to established business leaders and professionals who want to learn how to leverage data and analytics to accelerate their business

*careers. Demand driven versus supply driven -- Shifting from a supply-driven to a demand driven economy: digitalization -- Community-based digital business models: platforms -- Machine learning: the role of artificial intelligence in a demand driven model -- Transforming existing business to succeed in a demand driven economy -- Building a demand driven business model -- Marketing in a demand driven economy: data as competitive advantage -- Transforming organizations: from digital to demand driven -- The new playground for organizations -- Competition and technology -- The road ahead -- Practical research: product-as-a-service in practice -- Business models and comparison. The first in-depth study of how energy is consumed in the ASEAN region, making a great deal of information which until now is highly scattered. This book analyses four major aspects of energy demand, namely, trends in commercial energy consumption, economic growth and energy demand, non-commercial energy use and energy consumption by end-use. The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as*

*envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing. In its fifth edition, this report focuses on recent developments in Africa's banking sectors and the policy options for all stakeholders. The study of banking sectors across all African sub-regions includes the results of the EIB survey of banking groups operating in Africa. Three thematic chapters address challenges and opportunities for financing investment in Africa: Investing sustainably in Africa's cities; Mobilising agricultural value chain financing in Africa: why and how; Remittances and financial sector development in Africa. "Demand-Driven Business Strategy explains the ways of transforming business models from supply driven to demand driven through digital technologies and big data analytics. The book covers important topics such as digital leadership, the role of Artificial Intelligence, and platform firms and their role in business model transformation. Students are walked through the*

*nature of supply and demand driven models and how organizations transform from one to the other. Theoretical insights are combined with real-world application through global case studies and examples from Amazon, Google, Uber, Volvo and Picnic. Chapter objectives and summaries provide consistent structure and aid learning, whilst reflective questions encourage further thought and discussion. Comprehensive and practical, this is an essential text for advanced undergraduate and postgraduate students studying Strategic Management, Marketing, Business Innovation, Consumer Behaviour, Digital Transformation and Entrepreneurship"-- Energy consumption in buildings, accounting for 41% of 2010 primary energy consumption in the United States (US), is particularly vulnerable to climate change due to the direct relationship between space heating/cooling and temperature. Past studies have assessed the impact of climate change on long-term mean and/or peak energy demands. However, these studies usually neglected spatial variations in the "balance point" temperature, population distribution effects, air-conditioner (AC) saturation, and the extremes at smaller spatiotemporal scales, making the implications of local-scale vulnerability incomplete. Here I develop empirical relationships between building energy consumption and temperature to explore the impact of climate change on long-term mean and extremes of energy demand, and test the sensitivity of these impacts to various factors. I find increases in summertime electricity demand exceeding 50% and decreases in wintertime non-electric energy demand of more*

than 40% in some states by the end of the century. The occurrence of the most extreme (appearing once-per-56-years) electricity demand increases more than 2600 fold, while the occurrence of the once per year extreme events increases more than 70 fold by the end of this century. If the changes in population and AC saturation are also accounted for, the impact of climate change on building energy demand will be exacerbated. Using the individual building energy simulation approach, I also estimate the impact of climate change to different building types at over 900 US locations. Large increases in building energy consumption are found in the summer, especially during the daytime (e.g., >100% increase for warehouses, 5-6 pm). Large variation of impact is also found within climate zones, suggesting a potential bias when estimating climate-zone scale changes with a small number of representative locations. As a result of climate change, the building energy expenditures increase in some states (as much as \$3 billion/year) while in others, costs decline (as much as \$1.4 billion/year). Integrated across the contiguous US, these variations result in a net savings of roughly \$4.7 billion/year. However, this must be weighed against the cost (exceeding \$19 billion) of adding electricity generation capacity in order to maintain the electricity grids reliability in summer. Expansion of distributed energy resources (DERs) including solar photovoltaics, small- and medium-sized wind farms, gas-fired distributed generation, demand-side management, and energy storage poses significant complications to the design, operation,

*business model, and regulation of electricity systems. Using statistical regression analysis, this dissertation assesses if increased use of natural gas results in reduced renewable energy capacity, and if natural gas growth is correlated with increased or decreased non-fossil renewable fuels demand. System Generalized Method of Moments (System GMM) estimation of the dynamic relationship was performed on the indicators in the econometric model for the ten states with the fastest growth in solar generation capacity in the U.S. (e.g., California, North Carolina, Arizona, Nevada, New Jersey, Utah, Massachusetts, Georgia, Texas, and New York) to analyze the effect of natural gas on renewable energy diffusion and the ratio of fossil fuels increase for the period 2001-2016 to policy driven solar demand. The study identified ten major drivers of change in electricity systems, including growth in distributed energy generation systems such as intermittent renewable electricity and gas-fired distributed generation; flat to declining electricity demand growth; aging electricity infrastructure and investment gaps; proliferation of affordable information and communications technologies (e.g., advanced meters or interval meters), increasing innovations in data and system optimization; and greater customer engagement. In this ongoing electric power sector transformation, natural gas and fast-flexing renewable resources (mostly solar and wind energy) complement each other in several sectors of the economy. [?] The dissertation concludes that natural gas has a positive impact on solar and wind energy development: a 1% rise in natural gas capacity produces*

0.0304% increase in the share of renewable energy in the short-run (monthly) compared to the long-term effect estimated at 0.9696% (15-year period). Evidence from the main policy, environmental, and economic indicators for solar and wind-power development such as feed-in tariffs, state renewable portfolio standards, public benefits fund, net metering, interconnection standards, environmental quality, electricity import ratio, per-capita energy-related carbon dioxide emissions, average electricity price, per-capita real gross domestic product, and energy intensity are discussed and evaluated in detail in order to elucidate their effectiveness in supporting the utility industry transformation. The discussion is followed by a consideration of a plausible distributed utility framework that is tailored for major DERs development that has emerged in New York called *Reforming the Energy Vision*. This framework provides a conceptual base with which to imagine the utility of the future as well as a practical solution to study the potential of DERs in other states. The dissertation finds this grid and market modernization initiative has considerable influence and importance beyond New York in the development of a new market economy in which customer choice and distributed utilities are prominent. Since the beginning of broadcasting, radio and television producers have pushed their shows to audiences in controlled environments that end in a discrete and quantifiable site to be transformed into advertising rates. Today's viewers program their DVR's to create their own viewing schedules, wait to watch entire seasons in marathon DVD viewing sessions and

*stream shows to their mobile devices. The rise of a curatorial culture where viewers create their own entertainment packages and select from a buffet of viewing options and venues has caused a seismic shift for the traditional television industry. While audiences clamor for more story-driven and scripted entertainment, their new viewing habits undermine the dominant economic structures that fund quality episodic series. Television on Demand examines how we have reached this present moment; and considers the viable future(s) of this crucial culture industry. This leads to an understanding of an empowered audience that realizes its means of control of how it consumes media, as well as a new way of looking at the industry we have traditionally and currently call 'television.' This edited collection critically engages with an important but rarely-asked question: what is energy for? This starting point foregrounds the diverse social processes implicated in the making of energy demand and how these change over time to shape the past patterns, present dynamics and future trajectories of energy use. Through a series of innovative case studies, the book explores how energy demand is embedded in shared practices and activities within society, such as going to music festivals, cooking food, travelling for business or leisure and working in hospitals. Demanding Energy investigates the dynamics of energy demand in organisations and everyday life, and demonstrates how an understanding of spatiality and temporality is crucial for grasping the relationship between energy demand and everyday practices. This collection will be of interest to researchers and students in the fields of*

*energy, climate change, transport, sustainability and sociologies and geographies of consumption and environment. Chapters 1 and 15 of this book are available open access under a CC BY 4.0 license at [link.springer.com](http://link.springer.com) Hospitals and nursing homes are responding to changes in the health care system by modifying staffing levels and the mix of nursing personnel. But do these changes endanger the quality of patient care? Do nursing staff suffer increased rates of injury, illness, or stress because of changing workplace demands? These questions are addressed in *Nursing Staff in Hospitals and Nursing Homes*, a thorough and authoritative look at today's health care system that also takes a long-term view of staffing needs for nursing as the nation moves into the next century. The committee draws fundamental conclusions about the evolving role of nurses in hospitals and nursing homes and presents recommendations about staffing decisions, nursing training, measurement of quality, reimbursement, and other areas. The volume also discusses work-related injuries, violence toward and abuse of nursing staffs, and stress among nursing personnel--and examines whether these problems are related to staffing levels. Included is a readable overview of the underlying trends in health care that have given rise to urgent questions about nurse staffing: population changes, budget pressures, and the introduction of new technologies. *Nursing Staff in Hospitals and Nursing Homes* provides a straightforward examination of complex and sensitive issues surround the role and value of nursing on our health care system. Organisation transformation success relies on a well-*

*planned process and structured implementation. Many organisations have attempted but success rate is still low. This book is intended to provide the fundamental understanding of transformation and how holistic path concept is applied in the transformation process. It is structured to ease the implementation by first establishing the understanding of the concepts and followed by the steps in planning, implementation and highlighting the critical success factors to help organisations who want to implement transformation. The concepts is developed with empirical evidence of its application and the support of various theories to support its validity and generalisability. In his assessment of the transformation of the Roman World Henri Pirenne assigned little significance to the sixth century, seeing it primarily as a period of continuity. In this volume twelve scholars assess the period in the light of new evidence and new perspectives. The result is an infinitely complex picture, covering Scandinavia and Central Europe as well as the western Mediterranean, in which continuity and change exist side by side. The potential effects of climate change on the operation of California's electric power system, on both the supply and demand sides, is an important impact category for research and for policy planning and management. It is also one of the most challenging to analyze, inasmuch as it involves the future interactions among the climate system, a highly complex, engineered technical system, and socioeconomic trends that are difficult to project in their own right. This paper uses new projections of regional climate change affecting California*

*to generate simple illustrative estimates of possible impacts on state electricity consumption, demand, and expenditures. Private enterprises in advanced economies have been learning to use information and communication technology (ICT) to innovate and transform their processes, products, services and business models, significantly improving productivity and competitiveness. Moreover, the ICT industry itself has become a major source of job creation and a contributor to economic growth and business transformation. A key question today is whether and how developing countries can learn to benefit from the ICT revolution, and what roles the government and private sector can play. Already, a number of developing countries have been inspired by the example of India and China, and are now seeking to jump on the outsourcing bandwagon. Nevertheless, with few exceptions in the developing world, little attention has been paid by policymakers and practitioners to invest systematically and proactively in ICT-enabled growth, poverty reduction and grassroots innovation. Most communities and small and medium-sized enterprises in developing countries, for example, face multiple constraints to adopting and leveraging this general purpose technology, and lack the capabilities for maximizing its potential. In "Enabling Enterprise Transformation", Nagy Hanna draws on his rich experience of over 35 years at the World Bank and other aid agencies as a development strategist and ICT policy expert, the most current research, and best practices from around the world to provide practical tools for promoting economic and social*

*transformation through ICT. He assesses various initiatives to develop and diffuse ICT, such as innovation funds, incubators, parks, public-private partnerships, and comprehensive promotion programs. He argues for the strategic options now open for developing countries to participate in ICT production, to deploy ICT to transform industries and services, and to leverage ICT as a new national infrastructure for improving the business environment and enhancing the competitiveness of the whole economy. The challenge for leaders in developing countries is to create such social and institutional dynamics for learning about ICT use and adaptation at many levels. Lessons gained so far from programs to build these social learning and innovation capabilities at the institutional and grassroots levels should be shared among developing countries, and a dialogue among business leaders, policymakers, development agencies, educational institutions, and the general citizenry must be advanced. Occupying Alcatraz discusses how in 1969, a group of daring Native American activists launched a 19-month takeover of Alcatraz Island in San Francisco Bay, seeking to highlight the poor living conditions that persisted in Native American communities throughout the country. Aligned to Common Core Standards and correlated to state standards. Essential Library is an imprint of Abdo Publishing, a division of ABDO. The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the*

*Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists. This consultation document seeks views on proposals for implementing the key mechanisms under electricity market reform (EMR) - the Contracts for Difference (CfDs), the Capacity Market, and associated institutional and delivery arrangements. A package of draft secondary legislation is included to help illustrate the proposals. EMR is the Government's response to the challenges facing the electricity sector: a fifth of 2011 capacity has to close over the next ten years; the need to transform the generation mix to respond to climate change and to meet legally-binding carbon and*

*renewable targets; the expectation that electricity demand will continue to increase over the coming decades. An estimated £110 billion investment is required over the next 10 years. CfDs will provide long-term revenue stabilisation to low-carbon plant, allowing investment to come forward at a lower cost of capital. The Capacity Market will provide a regular retainer payment to reliable forms of capacity (both demand and supply side), in return for such capacity being available when electricity supply is being squeezed. The National Grid will be the delivery body for EMR. The key mechanisms will be supported by: carbon price floor, a tax underpinning the price of carbon emissions in the UK; emissions performance standard, a regulatory backstop to the amount of CO2 emissions from new fossil-fuel power stations; action to promote electricity demand reduction; Ofgem's measures to improve wholesale market liquidity. The Energy Bill currently progressing through Parliament will introduce the powers to implement EMR. First Published in 2001. Routledge is an imprint of Taylor & Francis, an informa company. This report addresses the problem of estimating Air Force needs for aircraft recoverable spare parts and their depot-level repair. Since the forecasting techniques imbedded in the Air Force Materiel Command's current requirements estimation process were implemented, a great deal has been learned about modeling parts demand processes more effectively. The report explores several issues involved in modeling and forecasting demands for aircraft spare parts along with alternative forecasting methods that can substantially reduce expected predictive error. The*

*research described here is part of a larger body of work intended to help us understand better the effects of uncertainty and management adaptations in shaping the performance of the logistics system in a variety of peacetime and wartime scenarios, and to account explicitly for those effects in spares and repair requirements estimation. This paper presents an empirical study of energy demand in which demand for a series of energy goods (Gas, Oil Products, Coal, Electricity) is expressed as a function of various factors, including temperature. Parameter values are estimated econometrically, using a dynamic panel data approach. Unlike previous studies in this field, the data sample has a global coverage, and special emphasis is given to sensitivity to temperature variations. These features make the model results especially valuable in the analysis of climate change impacts. Results are interpreted in terms of derived demand for heating and cooling. Nonlinearities and discontinuities emerge, making necessary to distinguish between different regions, seasons, and energy sources. Short and long run temperature elasticities of demand are estimated. Climate change impacts on human life have well defined and different origins, nevertheless in the determination of their final effects, especially those involving social economic responses, interactions among impacts are likely to play an important role. WHAT KIND OF WORLD DO YOU WANT TO LIVE IN? Throwing a party. Preparing a meal. Sending an email. These are things you do all the time. How can they really make a difference? Ten Ways to Change the World in Your Twenties shows how to transform these everyday*

*activities into world-changing events: Throw a party with a purpose. Prepare a sustainable meal. Send an email to your representative. An inspiring collection of ideas that can make the world a better place, this book taps into the potential of an energetic, influential generation and lights the path to shaping tomorrow by: Digging into what you love Volunteering in ways big and small Supporting political actions that reflect your values Leading an eco-active lifestyle Simplifying and reducing your footprint Using your buying power to encourage better business practices Eating well locally Hosting a party with a purpose Exploring the world through environmentally responsible travel Turning your passion into a vocation With a rating scale based on the time, money, and lifestyle impact required, and peppered with true tales of twentysomethings who've made an impact, Ten Ways to Change the World in Your Twenties provides resources and opportunities for you to use your talents to help create a history we can all be proud of. \*\*\* "Everywhere I go around the planet, I find young people, fresh from college, leading the new green movement. With savvy and heart, they're making a real difference—and as this book shows, you can too!" Bill McKibben | 350.org*

*Covering the functional characteristics of an on demand computing infrastructure, this book describes the IBM software products that can be used to create a computing infrastructure that has these characteristics. Also discussed is how IBM's on demand strategy can help a business to make more informed purchasing decisions for IBM application software. This book picks Cisco as an example to propose a framework of*

*ambidextrous integration of innovation and operation, which is the key to the success of global companies along their evolutions, especially for those technology companies. The authors try to find how the company combines active innovation and efficient operation for its sustainable development. On the basis of comprehensive analysis of the strategic leadership, change management, innovation system, M&As, IT-enabled value chains, collaboration, etc., in Cisco, as well as the interviews with Cisco staff, this book shows that management practices shape the balance of internal-external resources for explorative-exploitative innovations. IT strategies and implementation enable efficient operations when innovations are identified and justified in the leading company. Managerial insights for sustainable competitiveness can be gained from Cisco practices in this book. The companion of the book, Huawei: From Catching up to Lead, telling another growth path of technology company in China by similar framework. A doctor reveals how to break through the confusion and find faster, better, lower-cost healthcare. Annoyed with healthcare? So is Dr. Ramesh Subramani. In this book, the physician introduces you to over 250 apps, devices, and blood tests designed to prevent illness, take the confusion out of healthcare, find the best care, save you money, and even lose weight. As patients struggle with issues like finding cheaper medications, getting second opinions, finding the right specialists, and knowing what to do next about a medical condition, this guide—including forty-three insider tips, can help you take control. Whether you have a chronic medical condition, are*
