Historical Information Science Apr 18 2022 Historical Information Science is an extensive review and bibliographic essay, backed by almost 6,000 citations, detailing developments in

information technology since the advent of personal computers and the convergence of several social science and humanities disciplines in historical computing. Its focus is on the access, preservation, and analysis of historical information (primarily in electronic form) and the relationships between new methodology and instructional media, techniques, and research trends in library special collections, digital libraries, data archives, and museums.

Pretending and Imagination in Animals and Children Oct 12 2021 It is well known that children's activities are full of pretending and imagination, but it is less appreciated that animals can also show similar activities. Originally published in 2002, this book focuses on comparing and contrasting children's and animals' pretenses and imaginative activities. In the text, overviews of research present conflicting interpretations of children's understanding of the psychology of pretense, and describe sociocultural factors which influence children's pretenses. Studies of nonhuman primates provide examples of their pretenses and other simulative activities, explore their representational and imaginative capacities and compare their skills with

children. Although the psychological requirements for pretending are controversial, evidence presented in this volume suggests that great apes and even monkeys may share capacities for imagination with children, and that children's early pretenses may be less psychological than they appear.

Fast Software Encryption

Nov 20 2019 This book constitutes the thoroughly refereed post-conference proceedings of the 21st International Workshop on Fast Software Encryption, held in London, UK, March 3-5, 2014. The 31 revised full papers presented were carefully reviewed and selected from 99 initial submissions. The papers are organized in topical sections on designs; cryptanalysis; authenticated encryption; foundations and theory; stream ciphers; hash functions; advanced constructions.

Topics in Cryptology - CT-RSA 2008

Nov 25 2022 The RSA Conference is the largest regularly-staged computer security event, with over 350 vendors and many thousands of attendees. The Cryptographers' Track (CT-RSA) is a research conference within the RSA Conference. CT-RSA began in 2001, and has become one of the major established venues for presenting cryptographic research papers to a wide variety of audiences. CT-RSA 2008 was held in San Francisco, California from April 8 to April 11. The proceedings of CT-RSA 2008 contain 26 papers selected from 95 submissions pertaining to all aspects

of cryptography. Each submission was reviewed by at least three reviewers, which was made possible by the hard work of 27 Program Committee members and many external reviewers listed on the following pages. The papers were selected following a detailed online discussion among the Program Committee members. The program included an invited talk by Sha? Goldwasser. The current proceedings include a short abstract of her talk. I would like to express my deep gratitude to the Program Committee members, who volunteered their expertise and hard work over several months, as well as to the external reviewers. Special thanks to Shai Halevi for providing and maintaining the Web review system used for paper submission, reviewing, and final-version preparation. Finally, I would like to thank Burt Kaliski and Ari Juels of RSA Laboratories, as well as the RSA conference team, especially Bree LaBollita, for their assistance throughout the process.

Canon Powershot G16 Jan 27 2023 The Canon PowerShot G16 compact digital camera is the successor to the successful G15 and the first in the G-series to come equipped with built-in Wi-Fi. This facility makes it ideal for sharing images and video on social networking websites, or via email through the Canon Image Gateway. Images can also be uploaded using the maker's compatible iOS(R) or Android device with the download of a free Canon CameraWindow app. The G16's 28-140mm wide-angle lens has an aperture range of f/1.8-f/2.8, making it ideal for shooting in low-light conditions or for capturing a dramatic shallow depth-of-field with soft backgrounds. The camera features Canon's HS System, which combines a DIGIC 6 image processor and a 12.1-megapixel High-Sensitivity CMOS image sensor. Autofocus (AF) times and reduced shooting lag are improved over previous G-series models and continuous shooting speeds of up to 9.3 frames-per-second are possible. The G16 captures 1080p/60p Full HD video and has a built-in stereo microphone and an HDMI output for viewing videos on an HDTV. New shooting modes include Star mode for capturing the night sky: Star Nightscape will capture stars in a landscape image, while Star Trails will capture trails of

stars in a still image; Star Time Lapse Movie will shoot continuous still images of stars and combine them into a video that replicates the motion of the stars in the sky. With the handheld HDR Scene mode multiple shots of a particular scene are combined to create a high dynamic range image without the need for a tripod. This mode includes Natural, Art Bold, Art Embossed, Art Standard and Art Vivid options. The dials and controls on this digital compact camera are styled similarly to those on Canon's range of EOS digital SLR cameras. The G16 is also compatible with Canon Speedlite flashes and select accessories.

Abnormal Psychology, with Cases Jan 23 2020 Discover the many facets of abnormal psychology with real clinical cases. The text and integrated cases together provide an opportunity to explore many points of view in our ever-changing search for answers to the complex questions of psychopathology and gain a better understanding of how and why we act the way we do. The cases, which are all based on actual clinical situations, describe a specific clinical problem and provide a foundation on which to organize and further discuss the material in the chapter.

Block diagrams were used to develop the operational philosophy and the various magnetic core circuits. The computer

operates in the binary system from an 8, 4, 2, 1 code, and five arithmetic operations have been programmed. The arithmetic routines are such that the decimal equivalent of all numbers in the computations are never less than 0.001 nor greater than 1023.999. Schematic wiring diagrams were drawn for the computer sections and sizes of all circuit elements were tabulated.

Microprocessor Data Book Feb 16 2022 Microprocessor Data Book, Second Edition focuses on the available types of microprocessors and microcomputers, including description of internal architecture, instruction set, main electrical data, and package details of these instruments. The book first elaborates on 4-bit and 8-bit microprocessors and microcomputers. Discussions focus on Advanced Micro Devices Am2900 series, Hitachi HMCS40 series, Motorola MC6801 and MC6803, Motorola MC6809 series, Rockwell R6500/1 series, and RCA 1800 series. The text then examines 16-bit and 32-bit microprocessors and

microcomputers. Topics include Intel 80286 microprocessor, Motorola 68010, Texas Instruments TMS9980, Zilog Z8000 series, Motorola 68020 processor, and National 32032. The manuscript takes a look at other support devices, peripheral device controllers, and serial I/O devices, including Motorola MC6850 ACIA, Texas Instruments TMS9902 ACC, Thomson EFCIS EF9365/6, and floppy disk controllers. The publication is a valuable source of information for computer science experts and researchers interested in microprocessors and microcomputers.

Microprocessors and Microcomputer-Based System Design Dec 26 2022 Microprocessors and Microcomputer-Based System Design, Second Edition, builds on the concepts of the first edition. It discusses the basics of microprocessors, various 32-bit microprocessors, the 8085 microprocessor, the fundamentals of peripheral interfacing, and Intel and Motorola microprocessors. This edition includes new topics such as floating-point arithmetic, Program Array Logic, and flash memories. It covers the popular Intel 80486/80960 and Motorola 68040 as well as the Pentium and PowerPC microprocessors. The final chapter presents system design concepts, applying the design principles covered in previous chapters to sample problems.

Construction Jul 29 2020 This revised chapter II-2 of the International convention for the safety of life at sea (SOLAS II-2, 2002) came into force on 1 July 2002. This publication has been prepared to help ship-owners, masters, crews and industry to understand and comply with the Merchant Shipping (Fire Regulations) 2003 and the Merchant Shipping (Fire Protection) Regulations (Amendment) Regulations 2003. These new regulations will apply to ships

constructed on or after 1 July 2002, although there are some provisions that also apply to ships constructed before that date. The book also contains other relevant IMO (International Maritime Organization) Codes, Circulars, etc.
