[Uncertainty in Artificial Intelligence](#) Aug 23 2020 This volume contains papers accepted for presentation at the Fifteenth Conference on Uncertainty in Artificial Intelligence (UAI99) held at the Royal Institute of Technology (KTH) in Stockholm, Sweden from July 30 through August 1, 1999. This conference continues a 15-year tradition of providing an international forum for exchange of ideas on problems of reasoning, under uncertainty. During those 15 years, UAI has moved from a little-noticed niche at the edge of the field, solidly into the mainstream of artificial intelligence research and practice. Research first presented at UAI has contributed significantly to advances in a number of related fields and has found application in a wide variety of domains. The UAI conference has acquired a reputation for excellence, and the proceedings have become an important reference source for high-quality work in the field.

[Pest Risk Assessment of the Importation Into the United States of Unprocessed Eucalyptus Logs and Chips from South America](#) Apr 18 2020 In this report, we assess the unmitigated pest risk potential of importing Eucalyptus logs and chips from South America into the United States. To do this, we estimated the likelihood and consequences of introducing representative insects and pathogens of concern. Nineteen individual pest risk assessments were prepared, eleven dealing with insects and eight with pathogens. The selected organisms were representative examples of insects and pathogens found on the foliage, on the bark, in the bark, and in the wood of Eucalyptus spp. Among the insects and pathogens assessed, eight were

rated a high risk potential: purple moth (*Sarsina violescens*), scolytid bark and ambrosia beetles (*Scolytopsis brasiliensis*, *Xyleborus retusus*, *Xyleborus biconicus*, *Xyleborus* spp.), carpenterworm (*Chilecomadia valdiviana*) on *Eucalyptus nitens*, round-headed wood borers (*Chydarteres striatus*, *Retrachyderes thoracicus*, *Trachyderes* spp., *Steirastoma breve*, *Stenodontes spinibarbis*), eucalyptus longhorned borer (*Phoracantha semipunctata*), Botryosphaeria cankers (*Botryosphaeria dothidea*, *Botryosphaeria obtusa*, *Botryosphaeria ribi*), *Ceratocystis* canker (*Ceratocystis fimbriata*), and pink disease (*Erythricium salmonicolor*). A moderate pest risk potential was assigned to eleven other organisms or groups of organisms: eucalypt weevils (*Gonipterus* spp.), carpenterworm (*Chilecomadia valdiviana*) on two *Eucalyptus* species other than *E. nitens*, platypodid ambrosia beetle (*Megaplatypus parasulcatus*), yellow phoracantha borer (*Phoracantha recurva*), subterranean termites (*Coptotermes* spp., *Heterotermes* spp.), foliar diseases (*Aulographina eucalypti*, *Cryptosporiopsis eucalypti*, *Cylindrocladium* spp., *Phaeophleospora* spp., *Mycosphaerella* spp.), eucalyptus rust (*Puccinia psidii*), *Cryphonectria* canker (*Cryphonectria cubensis*), *Cytospora* cankers (*Cytospora eucalypticola*, *Cytospora eucalyptina*), *Coniothyrium* canker (*Coniothyrium zuluense*), and root and stem rots (*Armillaria* spp., *Phellinus* spp., *Ganoderma* sp., *Gymnopilus spectabilis*). For those organisms of concern that are associated with logs and chips of South American *Eucalyptus* spp., specific phytosanitary measures may be required to ensure the quarantine safety of proposed importations.

**Organ-on-a-chip** Jun 01 2021 *Organ-on-a-Chip: Engineered Microenvironments for Safety and Efficacy Testing* contains chapters from world-leading researchers in the field of organ on a chip development and applications, with perspectives from life sciences, medicine, physiology and engineering. The book contains an overview of the field, with sections covering the major organ systems and currently available technologies, platforms and methods. As readers may also be interested in creating biochips, materials and engineering best practice, these topics are also described. Users will learn about the limitations of 2D in-vitro models and the available 3D in-vitro models (what benefits they offer and some examples). Finally, the MOC section shows how the organ on a chip technology can be adapted to improve the physiology of in-vitro models. Includes case studies of other organs on a chip that have been developed and successfully used Provides insights into functional microphysiological organ on a chip platforms for toxicity and efficacy testing, along with opportunities for translational medicine Presented fields (PK/PD, physiology, medicine, safety) are given a definition followed by the challenges and potential of organs on a chip

The Impact of a Lifestyle Education Program (CHIP) on Cardiovascular Disease Risk Factors Jan 16 2020 In 2011, 45,600 deaths were attributed to cardiovascular disease (CVD) in Australia (ABS, 2013). CVD causes disability and death, as well as creating a financial burden to the individual and also to the health care systems. The current treatment of CVD is a predominately medical approach involving the use of pharmaceuticals and cardiac surgery. It is widely recognized that CVD is largely a disease of comfort, caused by poor lifestyle choices (Choi, Hunter, Tsou, & Sainsbury, 2005). Given CVD's lifestyle origins it is not surprising that an estimated 70 - 90% of coronary episodes can be avoided through positive lifestyle choices (Aldana et al., 2006). Residential lifestyle education programs, such as those which are delivered at the Pritikin Longevity Centre, have demonstrated success in reducing CVD risk factors through lifestyle modification, however these programs are expensive and separate the participants from their "home" environment. The CHIP intervention is a lifestyle education program that can be delivered inexpensively by volunteers and operates in a community setting so that participants are educated on making positive lifestyle choices while living in their normal living environment.

**Medicaid and CHIP Risk-Based Managed Care in 20 States** Feb 21 2023 Over the first decade of the 21st century, the role of risk-based managed health care for publicly insured beneficiaries has expanded substantially. This report examines this form of health care delivery in 20 states for both Medicaid and CHIP nonelderly adults and children, including people with disabilities. The 20 states were chosen because they include over 80 percent of both Medicaid and CHIP beneficiaries who are enrolled in risk-based managed care. Findings are based on interviews with state Medicaid and CHIP officials, as well as representatives from 40 Managed Care Organizations (MCOs) serving Medicaid and CHIP beneficiaries, and 40 health care providers or provider organizations. In addition, the report contains published data from various sources, including measures of access to care, quality of care, and satisfaction with care over the study period (2001–2010). This review of Medicaid and CHIP risk-based managed care over the first decade of the 21st century shows that well-established programs exist in 19 of the 20 study states (Connecticut being the exception) and that most states are seeking to expand their programs to cover more and higher-cost enrollees. While there is substantial variation across states in approaches, all the study states have developed ways to regularly select plans, define network requirements, and monitor access and quality. In contrast to the early years of development of Medicaid managed care, there is substantial stability in the number and types of plans participating in risk-based managed care. HEDIS and CAHPS data also suggest that preventive care use has improved under risk-based managed care and that beneficiaries are generally satisfied with their health plans. Thus, the risk-based managed care programs that currently exist provide a structure to absorb the newly covered adults under the Affordable Care Act and provide a learning laboratory and important lessons for other states in how to develop an effective risk-based managed care program for Medicaid and CHIP beneficiaries.

*Echo on a Chip - Secure Embedded Systems in Cryptography* Aug 15 2022 Based on the historical development of so-called Crypto Chips, the current Transformation of Cryptography shows numerous changes, innovations and new process designs in the field of Cryptography, which also need to be integrated in a hardware design of Microprocessors and

Microcontrollers for a Secure Embedded System. Using the example of the encrypting Echo protocol, a design of a hardware architecture based on three Chips is presented: The central Echo Chip #1 represents a "Trusted Execution Environment" (TEE), which is not connected to the Internet for the conversion processes from plain text to cipher text and is supposed to remain quasi original, to prevent software injections or possible uploads of copies of the plain text. The technical specifications of all three microprocessors are described in detail. The established paradigm of separation is recognized as a security feature and discussed as a perception for a Next Generation of Microcontrollers in the field of Mobile Messaging under the technical term "Going the Extra Mile". This security architecture is then discussed in the context of seven different current risk cases with the consolidated result that the well-known OSI (Open Systems Interconnection) Model is expanded to the Secure Architecture Model, abbreviated SAM.

*Chip On Board* May 20 2020 This book is a one-stop guide to the state of the art of COB technology. For professionals active in COB and MCM research and development, those who wish to master COB and MCM problem-solving methods, and those who must choose a cost-effective design and high-yield manufacturing process for their interconnect systems, here is a timely summary of progress in all aspects of this fascinating field. It meets the reference needs of design, material, process, equipment, manufacturing, quality, reliability, packaging, and system engineers, and technical managers working in electronic packaging and interconnection.

Zero Risk Real Estate Dec 19 2022 Get the confidence and tools to take advantage of this growing method of investing Tax liens sales and tax deed auctions, conducted by governmental agencies for delinquent taxes on real estate, are not new—they have been around for more than 200 years. But until recently, they remained a small niche market for investors. However, as more people become delinquent on their real estate taxes due to the increased foreclosure market, and local governments look for revenues wherever they can find them, this investing methodology has become increasingly popular - and it can be done from anywhere. Zero Risk Real Estate shows readers exactly what to look for, what to avoid, and how to get the biggest return with the smallest amount of risk. Explains how to utilize the internet for research and investing from anywhere in the world! Gives step-by-step advice on how to determine your investment objectives and where to find tax sale listings Details how to take advantage of "over-the-counter" bargains and increase your returns Shows what to do once you have your new tax certificate, and how to "cash in" This is not a get-rich-quick infomercial approach—it is a real investing strategy that is expected to grow over the next several years as an appealing alternative to the stock market and other investments. Using real-life examples and case studies, this book walks you through the process step-by-step to make it easy for beginners, and shares advanced investing techniques for more experienced investors.

**Molecular Biology of Human Cancers** Mar 10 2022 Cancer research is now an interdisciplinary effort requiring a basic knowledge of commonly used terms, facts, issues, and concepts. This interdisciplinary book meets this need, providing an authoritative overview to the field. It presents many of the molecules and mechanisms generally important in human cancers and examines a broad, but exemplary, selection of cancers. In addition, cancer research has now reached a critical stage, in which the accumulated knowledge on molecular mechanisms is gradually translated into improved prevention, diagnosis, and treatment. This book summarizes the state, pitfalls, and potential of these efforts.

Chapters in this updated release include An introduction to microfluidics and their applications, Design and fabrication of Micro/Nanofluidics devices and systems, Detection and separation of proteins using Micro/Nanofluidics devices, Micro/Nanofluidics devices for DNA/RNA detection and separation, Paper based microfluidics a forecast towards the most affordable and rapid point-of-care devices, Paper based micro/Nanofluidics devices for biomedical applications, Advances of Microfluidics Devices and their Applications in Personalized Medicine, and much more. Additional chapters cover Microfluidics for single cell analysis, Fluorescence Based Miniaturized Microfluidic and Nanofluidic Systems for Biomedical

Applications, Active Matter Dynamics in Confined Microfluidic Environments, Challenges and opportunities in micro/nanofluidics and lab-on-a-chip, and Paper-microfluidic signal-enhanced immunoassays. Offers basic understanding of the state-of-the-art design and fabrication of microfluidics/ nanofluidics and lab-on-chip Explains how to develop microfluidics/nanofluidics for biomedical application such as high throughput biological screening and separation Discusses the applications, challenges and opportunities in biomedical and translational research applications of microfluidics/nanofluidics

**Food Safety, Risk Intelligence and Benchmarking** Feb 26 2021 This book comprehensively argues for more future benchmarking between nations. Since the initial food safety benchmarking report was published in 2008, the sharing of data and protocols among nations has dramatically increased. It was intended to identify and evaluate common elements among global food safety systems. More specifically, benchmarking identifies those countries that employ comparatively best practices to assess, manage, and communicate the risks related to the safety of food and their respective food systems. The overarching intent of this benchmarking assessment, however, is to stimulate exchange and discussion on food safety performance among nations.

**Singapore Blue Chips, The: The Rewards & Risks Of Investing In Singapore's Largest Corporates** Nov 18 2022 A pioneering and comprehensive work, The Singapore Blue Chips puts the spotlight on 22 of Singapore's largest corporates. This is the first book that provides a quick snapshot of Singapore's large cap (large market capitalisation) corporates as investment propositions, and is a timely tribute to the nation's 50 years of independence and development. Written for finance professionals and students as well as readers with a general interest in business, investing and finance, each chapter of this book is dedicated to one company and delves into its attractiveness as an investment proposition, the associated investments risk and the company's prospects as of end-2016.

How Could This Happen? Feb 09 2022 The first comprehensive reference work on error management, blending the latest thinking with state of the art industry practice on how organizations can learn from mistakes. Even today the reality of error management in some organizations is simple: "Don't make mistakes. And if you do, you're on your own unless you can blame someone else." In most, it has moved on but it is still often centered around quality control, with Six Sigma Black Belts seeking to eradicate errors with an unattainable goal of zero. But the best organizations have gone further. They understand that mistakes happen, be they systemic or human. They have realized that rather than being stigmatized, errors have to be openly discussed, analyzed, and used as a source for learning. In *How Could This Happen?* Jan Hagen collects insights from the leading academics in this field – covering the prerequisites for error reporting, such as psychological safety, organizational learning and innovation, safety management systems, and the influence of senior leadership behavior on the reporting climate. This research is complemented by contributions from practitioners who write about their professional experiences of error management. They provide not only ideas for implementation but also offer an inside view of highly demanding work environments, such as flight operations in the military and operating nuclear submarines. Every organization makes mistakes. Not every organization learns from them. It's the job of leaders to create the culture and processes that enable that to happen. Hagen and his team show you how.

**Genomics and Public Health** Jul 22 2020 When genomics and public health are integrated into society, it will create as many responsibilities as rights for citizens, researchers, and decision makers. Indeed, the expression of genetic risk factors in both common and infectious diseases is of great interest to public health. Policy development in this area then needs to tackle crucial themes such as: research and its application to public health and genomic medicine, the authority of the state, the right to privacy, and the roles and responsibilities of citizens and the State. Considering the current fears of a world-wide pandemic, this book is a timely and insightful exploration of both research possibilities and the role of the state. It will help to understand the limits of possible state access to biobanks and data. It examines the issue of the possible use of newborn screening programmes by public health authorities. It also attempts to understand the protection of individual privacy and the public interest in the promotion of health and the prevention of disease. Moreover, do citizens have a say? Will public attitudes be different towards research in public health genomics compared to genetic testing?

*Environmental Technology Transfer Synergism* Sep 16 2022 A prerequisite to technology transfer is community acceptance of a new technology to be transferred. Health risk assessment is the instrument typically used for evaluating technologies relative to public health issues, which often constitute one basis for community concern about a technology. Technology transfer, therefore, also depends upon community acceptance of risk assessment technology, which itself is new to many communities. Interdependence of a hardware technology, such as electronic chip fabrication supporting the computer industry, with a software technology, specifically health risk assessment, may be termed "technology transfer synergism." Here, a case study is presented in which transfer of chip fabrication technology to an upstate New York community failed. The primary basis for this technology transfer failure was community rejection of the chip fabrication technology, not mistrust of risk assessment as an evaluating instrument.(Publication abstract).

**Public Health Nursing - Revised Reprint** Sep 23 2020 This Revised Reprint of our 8th edition, the "gold standard" in community health nursing, *Public Health Nursing: Population-Centered Health Care in the Community*, has been updated with a new Quality and Safety Education in Nursing (QSEN) appendix that features examples of incorporating knowledge,

skills, and attitudes to improve quality and safety in community/public health nursing practice. As with the previous version, this text provides comprehensive and up-to-date content to keep you at the forefront of the ever-changing community health climate and prepare you for an effective nursing career. In addition to concepts and interventions for individuals, families, and communities, this text also incorporates real-life applications of the public nurse's role, Healthy People 2020 initiatives, new chapters on forensics and genomics, plus timely coverage of disaster management and important client populations such as pregnant teens, the homeless, immigrants, and more. Evidence-Based Practice boxes illustrate how the latest research findings apply to public/community health nursing. Separate chapters on disease outbreak investigation and disaster management describe the nurse's role in surveilling public health and managing these types of threats to public health. Separate unit on the public/community health nurse's role describes the different functions of the public/community health nurse within the community. Levels of Prevention boxes show how community/public health nurses deliver health care interventions at the primary, secondary, and tertiary levels of prevention. What Do You Think?, Did You Know?, and How To? boxes use practical examples and critical thinking exercises to illustrate chapter content. The Cutting Edge highlights significant issues and new approaches to community-oriented nursing practice. Practice Application provides case studies with critical thinking questions. Separate chapters on community health initiatives thoroughly describe different approaches to promoting health among populations. Appendixes offer additional resources and key information, such as screening and assessment tools and clinical practice guidelines. NEW! Quality and Safety Education in Nursing (QSEN) appendix features examples of incorporating knowledge, skills, and attitudes to improve quality and safety in community/public health nursing practice. NEW! Linking Content to Practice boxes provide real-life applications for chapter content. NEW! Healthy People 2020 feature boxes highlight the goals and objectives for promoting health and wellness over the next decade. NEW! Forensic Nursing in the Community chapter focuses on the unique role of forensic nurses in public health and safety, interpersonal violence, mass violence, and disasters. NEW! Genomics in Public Health Nursing chapter includes a history of genetics and genomics and their impact on public/community health nursing care.

**Gambling with Borrowed Chips** Nov 25 2020 The United States experienced a meltdown in its financial system that devastated much of the economy in the years 2007 to 2008. In *Gambling with Borrowed Chips*, author Christopher C. Faille reexamines what is becoming settled wisdom about that financial crisis and the economic troubles that have plagued the country ever since. In his analysis, Faille challenges what he calls the common misdiagnosis that speculation—especially on the short side—combined with indebtedness, leverage, deregulation, and greed, produced mayhem. In *Gambling with Borrowed Chips*, Faille contends that speculation, or “gambling,” serves valuable functions in an economy. It steers money and other resources to where they can be most of use; it punishes profligacy and rewards foresight; and it disturbs overly cozy arrangements such as those of entrenched corporate managements. *Gambling with Borrowed Chips* argues that it is acceptable to gamble, even with borrowed chips. Faille helps us understand the real problem: gambling in a casino that hands out the chips too readily or one that is always eager to manufacture new chips in order to stimulate activity.

*The Employers' Liability Acts and the Assumption of Risks in New York, Massachusetts, Indiana, Alabama, Colorado, and England* Dec 07 2021

*Corporate Risk and Governance* Oct 05 2021 *Corporate Risk and Governance* addresses corporate risk management and governance requirements affecting large organizations in all industry sectors and countries. The book strongly advocates implementation of Corporate Governance Codes, ISO 31000 Risk Management, ISO 22301 Business Continuity Management and PAS 200 Crisis Management but warns against treating any standard or model slavishly, as if it can offer easy salvation or a simple route to a risk nirvana. Alan Waring challenges many hallowed beliefs, attitudes and practices that continue to hamper the delivery of effective Enterprise Risk Management (ERM) and thereby good governance. Those boardroom and corporate cultures that are complacent about risk exposures and risk management or, worse, encourage 'chancers' and a 'what can we get away with' attitude, are examined in depth along with what is required to embed a culture of responsible risk-taking. Some 75 cases from around the world provide graphic examples and lessons to be learned. Although the text includes some summary practical guidance, this book is designed primarily as a thinking aid rather than a risk management cookbook. It is something to encourage better informed risk-decision making; a more informed view of enterprise risk exposures, control and mitigation issues and an awareness of boardroom and corporate culture issues and their impact on effective ERM.

**Business Risk Management Handbook** Mar 30 2021 Provides a practice-oriented overview of risk management issues with particular reference to identifying and measuring risk. Looks at some of the current risk issues and the concept of organisations creating a 'Sustainable Enterprise Risk Management' (SERM) methodology to encapsulate these risk areas with more traditional areas of risk management. Includes examples and case studies. Examines new research on the social and environmental categories of sustainability related risks.

*Risk Assessment* Mar 18 2020 Guides the reader through a risk assessment and shows them the proper tools to be used at the various steps in the process This brand new edition of one of the most authoritative books on risk assessment adds ten new chapters to its pages to keep readers up to date with the changes in the types of risk that individuals, businesses, and governments are being exposed to today. It leads readers through a risk assessment and shows them the proper tools to be used at various steps in the process. The book also provides readers with a toolbox of techniques that can be used to aid them in analyzing conceptual designs, completed designs, procedures, and operational risk. *Risk Assessment: Tools, Techniques, and Their Applications*, Second Edition includes expanded case studies and real life examples; coverage on risk assessment software like SAPPHIRE and RAVEN; and end-of-chapter questions for students. Chapters progress from the concept of risk, through the simple risk assessment techniques, and into the more complex techniques. In addition to discussing the techniques, this book presents them in a form that the readers can readily adapt to their particular situation. Each chapter, where applicable, presents the technique

discussed in that chapter and demonstrates how it is used. Expands on case studies and real world examples, so that the reader can see complete examples that demonstrate how each of the techniques can be used in analyzing a range of scenarios Includes 10 new chapters, including Bayesian and Monte Carlo Analyses; Hazard and Operability (HAZOP) Analysis; Threat Assessment Techniques; Cyber Risk Assessment; High Risk Technologies; Enterprise Risk Management Techniques Adds end-of-chapter questions for students, and provides a solutions manual for academic adopters Acts as a practical toolkit that can accompany the practitioner as they perform a risk assessment and allows the reader to identify the right assessment for their situation Presents risk assessment techniques in a form that the readers can readily adapt to their particular situation Risk Assessment: Tools, Techniques, and Their Applications, Second Edition is an important book for professionals that make risk-based decisions for their companies in various industries, including the insurance industry, loss control, forensics, all domains of safety, engineering and technical fields, management science, and decision analysis. It is also an excellent standalone textbook for a risk assessment or a risk management course.

**Products Liability Law** Oct 17 2022 Products Liability Law, Second Edition, by prolific tort scholar Mark Geistfeld, represents the “next generation” of casebooks on products liability. Earlier texts focused on the relative merits of strict liability and negligence, embodied in the apparently competing liability frameworks of the consumer expectations test in the Restatement (Second) of Torts and the risk-utility test in the Restatement (Third) of Torts. The majority of courts, however, have incorporated the risk-utility test into the framework of consumer expectations. By providing balanced coverage of both consumer expectations and the risk-utility test, the casebook keeps pace with ongoing developments in the case law and moves beyond the battles that largely defined products liability in the twentieth century. In addition to teaching students how liability rules protect consumer expectations via comprehensive application of the risk-utility test, this innovative casebook underscores the importance of doctrinal history, the psychology of evaluating product risks, and the role of products liability in the modern regulatory state. Students will learn how courts have applied established doctrines to novel problems ranging from the relevance of scientific evidence in toxic-tort cases to the distribution of defective products on the Amazon online marketplace. To further illustrate this dynamic, the casebook has twenty-nine problems with associated analysis involving the liability issues likely to be raised by the emerging technology of autonomous vehicles. Finally, the casebook reinforces students’ knowledge of fundamental tort principles while developing specialized expertise and a deeper understanding of the torts process. New to the Second Edition: A dozen new main cases updating older case law, providing coverage of new issues not addressed in the First Edition, and/or improving upon the analysis provided by the associated case in the First Edition Retention of the majority of main cases from the first edition, with revisions to the ensuing notes incorporating relevant case law developments A reorganized and updated chapter covering the controversy over the relative merits of the consumer expectations and risk-utility tests Comprehensive discussion of the tort version of the implied warranty—the genesis of the consumer expectations test—and its relation to product malfunctions and the risk-utility test A new chapter addressing the existence of the tort duty and identifying the difference between patent dangers and patent defects Reorganization of the chapter on factual causation, emphasizing the continuity of evidentiary problems running across different types of cases, ranging from the heeding presumption in warning cases, to market-share liability, to proof of both general and specific causation in toxic-tort cases Professors and students will benefit from: Classroom-tested materials taught for over 20 years by an award-winning professor Interesting cases that illustrate both the traditional and contemporary character of products liability litigation; cases are followed by extensive notes Each chapter addressing doctrinal issues concludes with problems on autonomous vehicles. The full set of 29 problems provides students with the necessary background for understanding liability issues posed by this emerging technology. Each problem is followed by the author’s analysis of the associated issues, cross-referenced to the relevant casebook material.
