Millions of people around the world today spend portions of their lives in online virtual worlds. Second Life is one of the largest of these virtual worlds. The residents of Second Life create communities, buy property and build homes, go to concerts, meet in bars, attend weddings and religious services, buy and sell virtual goods and services, find friendship, fall in love—the possibilities are endless, and all encountered through a computer screen. At the time of its initial publication in 2008, *Coming of Age in Second Life* was the first book of anthropology to examine this thriving alternate universe. Tom Boellstorff conducted more than two years of fieldwork in Second Life, living among and observing its residents in exactly the same way anthropologists traditionally have done to learn about cultures and social groups in the so-called real world. He conducted his research as the avatar "Tom Bukowski," and applied the rigorous methods of anthropology to study many facets of this new frontier of human life, including issues of gender, race, sex, money, conflict and antisocial behavior, the construction of place and time, and the interplay of self and group. *Coming of Age in Second Life* shows how virtual worlds can change ideas about identity and society. Bringing anthropology into territory never before studied, this book demonstrates that in some ways humans have always been virtual, and that virtual worlds in all their rich complexity build upon a human capacity for culture that is as old as humanity itself. Now with a new preface in which the author places his book in light of the most recent transformations in online culture, *Coming of Age in Second Life* remains the classic ethnography of virtual worlds. Drawing on theories of media, systems, and cultural techniques, *Keys to Play* spans Greek myth and contemporary Japanese digital games to chart a genealogy of musical play and its animation via improvisation, performance, and recreation. As a paradigmatic digital interface, the keyboard forms a field of play on which the book's diverse objects of inquiry—from clavichords to PCs and eighteenth-century musical dice games to the latest rhythm-action titles—enter into analogical relations. Remapping the keyboard's topography by way of Mozart and Super Mario, who head an expansive cast of historical and virtual actors, *Keys to Play* invites readers to unlock ludic dimensions of music that are at once old and new. This modules-based version of Myers' *Exploring Psychology* breaks down the book's 15 chapters into 43 short modules. Myers was inspired to create this text by the memory research in "chunking" (showing that shorter reading assignments are more effectively absorbed than longer ones), as well as by numerous students and instructors who expressed a strong preference for textbooks with more, shorter chapters. Each self-standing module can be read in a single sitting, and instructors can assign any combination of modules, in any order they want. **DSM 5 Updates Available for Fall 2014 classes**, this update version features new content from David Myers in response to the release of the DSM-5. This new content is integrated into the text without changing pagination or the structure of the chapters. A special **DSM 5 Supplement** by the David Myers is available for Fall 2013 and Spring and Summer 2014 courses. A consistent problem that confronts disaster reduction is the disjunction between academic and expert knowledge and policies and practices of agencies mandated to deal with the concern. Although a great deal of knowledge has been acquired regarding many aspects of disasters, such as driving factors, risk construction, complexity of resettlement, and importance of peoples' culture, very little has become protocol and procedure. *Disaster Upon Disaster* illuminates the numerous disjunctions between the suppositions, realities, agendas, and executions in the field, goes on to detail contingencies, predicaments, old and new plights, and finally advances solutions toward greatly improved outcomes. Political and civil discourse in the United States is characterized by "Truth Decay," defined as increasing disagreement about facts, a blurring of the line between opinion and fact, an increase in the relative volume of opinion compared with fact, and lowered trust in formerly respected sources of factual information. This report explores the causes and wide-ranging consequences of Truth Decay and proposes strategies for further action. Now updated with the journeys of the 2012 Mars rover Curiosity and the 2020 Mars rover Perseverance, *Solar System* undertakes an astonishing visual journey through time and space through fascinating text, original graphics, and stunning photographs. Never before have the wonders of our solar system been so immediately accessible to readers of all ages. Award-winning writer and broadcaster Marcus Chown combines science and history to visually and narratively explore our neighboring planets, dwarf planets, moons, asteroids, comets and more, as well as the historical figures who aided in their discoveries. From the explosive surface of the sun to the new missions on Mars; from the gargantuan rings of Saturn to the volcanoes of Io; from the latest images of Pluto from NASA's New Horizons probe, to a simulation of what the Oort Cloud might look like, *Solar System* offers a window seat from which to view the beauty and magnificence of space. **The brain ...** There is no other part of the human anatomy that is so intriguing. How does it develop and function and why does it sometimes, tragically, degenerate? The answers are complex. In *Discovering the Brain*, science writer Sandra Ackerman cuts through the complexity to bring this vital topic to the public. The 1990s were declared the "Decade of the Brain" by former President Bush, and the neuroscience community responded with a host of new investigations and conferences. *Discovering the Brain* is based on the Institute of Medicine conference, *Decade of the Brain: Frontiers in Neuroscience and Brain Research*. *Discovering the Brain* is a "field guide" to the brain—an easy-to-read discussion of the brain's physical structure and where functions such as language and music appreciation lie. Ackerman examines: How electrical and chemical signals are conveyed in the brain. The mechanisms by which we see, hear, think, and pay attention—and how a "gut feeling" actually originates in the brain. Learning and memory retention, including parallels to computer memory and what they might tell us about our own mental capacity. Development of the brain throughout the life span, with a look at the aging brain. Ackerman provides an enlightening chapter on the connection between the brain's physical condition and various mental disorders and notes what progress can realistically be made toward the prevention and treatment of stroke and other ailments. Finally, she explores the potential for major advances during the "Decade of the Brain," with a look at medical imaging techniques—what various technologies can and cannot tell us—and how the public and private sectors can contribute to continued advances in neuroscience. This highly readable volume will provide the public and policymakers—and many scientists as well—with a helpful guide to understanding the many discoveries that are sure to be announced throughout the "Decade of the Brain." What is—and what was—"the world"? Though often treated as interchangeable with the ongoing and inexorable progress of globalization, concepts of "world," "globe," or "earth" instead suggest something limited and absolute. This innovative and interdisciplinary volume concerns itself with this central paradox: that the complex, heterogeneous, and purportedly transhistorical dynamics of globalization have given rise to the idea and reality of a finite—and thus vulnerable—world. Through studies of illuminating historical moments that range from antiquity to the era of Google Earth, each contribution helps to trace the emergence of the world in multitudinous representations, practices, and human experiences. Investigates Plato's account of the tripartite soul, looking at how the theory evolved over the Republic, Phaedrus and Timaeus. This is a completely updated and revised version of a monograph published in 2002 by the NASA History Office under the original title *Deep Space Chronicle: A Chronology of Deep Space and Planetary Probes, 1958-2000*. This new edition not only adds all events in robotic deep space exploration after 2000 and up to the end of 2016, but it also completely corrects and updates all accounts of missions from 1958 to 2000--Provided by publisher. Academic pipeline programs are critical to effectively support the steady increase of diverse students entering the academy. **Academic Pipeline Programs: Diversifying Bachelor's to the Professoriate** describes best practices of successful academic government and privately funded pre-collegiate, collegiate, graduate, and postdoctoral/faculty development pipeline programs. The authors explore 21 hallmark academic pipeline programs using their THRIVE index: Type, History, Research, Inclusion, Identity, Voice, and Expectation. The final chapter of the book offers information for using and starting similar programs. The appendix offers an interactive Geographic Information System (GIS) mapped database of programs using the THRIVE index. This book will equip parents, high school counselors, college advisors, faculty, department chairs, and higher education administrators to identify academic pipeline programs that fit their needs. Readers will also learn about how academic pipeline programs are situated within an institutional or organizational change model. Finalist for the National Book Award for Nonfiction \* New York Times Bestseller \* Starred Booklist and Library Journal Editors' Spring Pick \* A Huffington Post Notable Nonfiction Book of the Year \* One of the Best Books of the Month on Goodreads \* Library Journal Best Sci-Tech Book of the Year \* An American Library Association Notable Book of the Year "Sy Montgomery's *The Soul of an Octopus* does for the creature what Helen Macdonald's *H Is for Hawk* did for raptors." —New Statesman, UK "One of the best science books of the year." —Science Friday, NPR Another New York Times bestseller from the author of *The Good Good Pig*, this "fascinating...touching...informative...entertaining" (*The Daily Beast*) book explores the emotional and physical world of the octopus—a surprisingly complex, intelligent, and spirited creature—and the remarkable connections it makes with humans. In pursuit of the wild, solitary, predatory octopus, popular naturalist Sy Montgomery has practiced true immersion journalism. From New England aquarium tanks to the reefs of French Polynesia and the Gulf of Mexico, she has befriended octopuses with strikingly different personalities—gentle Athena, assertive Octavia, curious Kali, and joyful Karma. Each creature shows her cleverness in myriad ways: escaping enclosures like an orangutan; jetting water to bounce balls; and endlessly tricking companions with multiple "sleights of hand" to get food. Scientists have only recently accepted the intelligence of dogs, birds, and chimpanzees but now are watching octopuses solve problems and are trying to decipher the meaning of the animal's color-changing techniques. With her "joyful passion for these intelligent and fascinating creatures" (*Library Journal Editors' Spring Pick*), Montgomery chronicles the growing appreciation of this mollusk as she tells a unique love story. By turns funny, entertaining, touching, and profound, *The Soul of an Octopus* reveals what octopuses can teach us about the meeting of two very different minds. A candid, feminist, and personal deep dive into the science and culture of pregnancy and motherhood Like most first-time mothers, Angela Garbes was filled with questions when she became pregnant. What exactly is a placenta and how does it function? How does a body go into labor? Why is breast best? Is wine totally off-limits? But as she soon discovered, it's not easy to find satisfying answers. Your obstetrician will cautiously quote statistics; online sources will scare you with conflicting and often inaccurate data; and even the most trusted books will offer information with a heavy dose of judgment. To educate herself, the food and culture writer embarked on an intensive journey of exploration, diving into the scientific mysteries and cultural attitudes that surround motherhood to find answers to questions that had only previously been given in the form of advice about what women ought to do—rather than allowing them the freedom to choose the right path for themselves. In *Like a Mother*, Garbes offers a rigorously researched and compelling look at the physiology, biology, and psychology of pregnancy and motherhood, informed by in-depth reportage and personal experience. With the curiosity of a journalist, the perspective of a feminist, and the intimacy and urgency of a mother, she explores the emerging science behind the pressing questions women have about everything from miscarriage to complicated labors to postpartum changes. The result is a visceral, full-frontal look at what's really happening during those nine life-altering months, and why women deserve access to better care, support, and information. Infused with humor and born out of awe, appreciation, and understanding of the female body and its strength, *Like a Mother* debunks common myths and dated assumptions, offering guidance and camaraderie to women navigating one of the biggest and most profound changes in their lives. This is the framework for meaningful connection." In Atlas of the Heart, Brown takes us on a journey through eighty-seven of the emotions and experiences that define what it means to be human. As she maps the necessary skills and an actionable framework for meaningful connection, she gives us the language and tools to access a universe of new choices and second chances—a universe where we can share and steward the stories of our bravest and most heartbreaking moments with one another in a way that builds connection. Over the past two decades, Brown's extensive research into the experiences that make us who we are has shaped the cultural conversation and helped define what it means to be courageous with our lives. Atlas of the Heart draws on this research, as well as on Brown's singular skills as a storyteller, to show us how accurately naming an experience doesn't give the experience more power—it gives us the power of understanding, meaning, and choice. Brown shares, "I want this book to be an atlas for all of us, because I believe that, with an adventurous heart and the right maps, we can travel anywhere and never fear losing ourselves." "Finding Ultra" recounts Roll's remarkable journey from an overweight 40-year-old to the starting line of the elite 320-mile Ultraman competition in a beautifully written portrait of what willpower can accomplish. The author's Quantum Healing: Exploring the Frontiers of Mind/Body Medicine, aimed to show how health and sickness are controlled by awareness at the level of quantum physics, where mind and body are one. Now Dr Chopra has written a practical guide to harnessing that healing power of the mind, a book based on the principles of Ayurveda, a 5000-year-old system of mind/body medicine that has recently been rediscovered. The book provides a step-by-step programme of mind/body medicine tailored to the individual's need. The result is a plan for re-establishing the body's essential balance with nature. "To commemorate the 50th anniversary of the first successful planetary mission, Mariner 2 sent to Venus in 1962, the NASA History Program Office, the Division of Space History at the National Air and Space Museum, NASA's Science Mission Directorate, and the Jet Propulsion Laboratory organized a symposium. "Solar System Exploration @ 50" was held in Washington, D.C., on 25-26 October 2012. The purpose of this symposium was to consider, over the more than 50-year history of the Space Age, what we have learned about the other bodies of the solar system and the processes by which we have learned it. Symposium organizers asked authors to address broad topics relating to the history of solar system exploration such as various flight projects, the development of space science disciplines, the relationship between robotic exploration and human spaceflight, the development of instruments and methodologies for scientific exploration, as well as the development of theories about planetary science, solar system origins and implications for other worlds. The papers in this volume provide a richly textured picture of important developments - and some colorful characters - in a half century of solar system exploration. A comprehensive history of the first 50 years of solar system exploration would fill many volumes. What readers will find in this volume is a collection of interesting stories about money, politics, human resources, commitment, competition and cooperation, and the "faster, better, cheaper" era of solar system exploration"-- "In cooperation with the Billy Ireland Cartoon Library & Museum, The Ohio State University Libraries." "Pollan keeps you turning the pages . . . clear-eyed and assured." —New York Times A #1 New York Times Bestseller, New York Times Book Review 10 Best Books of 2018, and New York Times Notable Book A brilliant and brave investigation into the medical and scientific revolution taking place around psychedelic drugs--and the spellbinding story of his own life-changing psychedelic experiences When Michael Pollan set out to research how LSD and psilocybin (the active ingredient in magic mushrooms) are being used to provide relief to people suffering from difficult-to-treat conditions such as depression, addiction and anxiety, he did not intend to write what is undoubtedly his most personal book. But upon discovering how these remarkable substances are improving the lives not only of the mentally ill but also of healthy people coming to grips with the challenges of everyday life, he decided to explore the landscape of the mind in the first person as well as the third. Thus began a singular adventure into various altered states of consciousness, along with a dive deep into both the latest brain science and the thriving underground community of psychedelic therapists. Pollan sifts the historical record to separate the truth about these mysterious drugs from the myths that have surrounded them since the 1960s, when a handful of psychedelic evangelists inadvertently catalyzed a powerful backlash against what was then a promising field of research. A unique and elegant blend of science, memoir, travel writing, history, and medicine, How to Change Your Mind is a triumph of participatory journalism. By turns dazzling and edifying, it is the gripping account of a journey to an exciting and unexpected new frontier in our understanding of the mind, the self, and our place in the world. The true subject of Pollan's "mental travelogue" is not just psychedelic drugs but also the eternal puzzle of human consciousness and how, in a world that offers us both suffering and joy, we can do our best to be fully present and find meaning in our lives. Fully revised and updated with the latest data in the field, the Sixth Edition of Exploring the Dimensions of Human Sexuality represents all aspects of human sexuality and explores how it affects personality, development, and decision making. Life at the end of the twentieth century presents us with a disturbing reality. Otherness, the simple fact of being different in some way, has come to be defined as in and of itself evil. Miroslav Volf contends that if the healing word of the gospel is to be heard today, Christian theology must find ways of speaking that address the hatred of the other. Reaching back to the New Testament metaphor of salvation as reconciliation, Volf proposes the idea of embrace as a theological response to the problem of exclusion. Increasingly we see that exclusion has become the primary sin, skewing our perceptions of reality and causing us to react out of fear and anger to all those who are not within our (ever-narrowing) circle. In light of this, Christians must learn that salvation comes, not only as we are reconciled to God, and not only as we "learn to live with one another", but as we take the dangerous and costly step of opening ourselves to the other, of enfolding him or her in the same embrace with which we have been enfolded by God.
